THE CONFUSED STATE OF THE INTERNSHIP

REGINALD FITZ, M.D.
BOSTON

Thirty years ago in Chicago, at the seventh annual conference of the Council on Medical Education, held at the Congress Hotel, Dr. James B. Herrick¹ read a paper which appeared to certain members of the audience as being quite revolutionary in character. It was entitled "The Educational Function of Hospitals and the Hospital Year." Sooner or later, Dr. Herrick asserted, a period of training in a hospital would be demanded of every American medical student before he became licensed to practice. Difficulties in the way of such a prescribed hospital year seemed by no means insurmountable. Either one of two things soon was bound to take place: either more internships would become available to accommodate the large annual output of doctors from medical schools or the number of graduates each year would be curtailed. Of these two possibilities, it was the number of internships which seemed most likely to change. An increasing proportion of the better hospitals soon would realize the impossibility of effective work without the assistance of interns. There would develop good internships and bad internships. An obvious difficulty, therefore, presently must be surmounted. In order to protect the prospective intern a means must be invented by which hospitals could be standardized in their ability to offer a satisfactory type of training.

An interested group of listeners heard this paper. Among those in the audience were such hardy perennials as Dr. Arthur D. Bevan, chairman of the Council on Medical Education of the American Medical Association, Dr. George Blumer of Yale, Dr. A. J. Carlson of the University of Chicago, General Ireland of the United States Army, Dr. W. A. Pusey of the College of Physicians and Surgeons and Dr. Fred E. Zapffe of the Association of American Medical Colleges. Dr. Blumer was the only one with enough temerity to discuss Dr. Herrick's paper from the floor. He thought that the most serious practical objection to Dr. Herrick's rather visionary plan was the present impossibility of finding a sufficient number of hospitals where conditions were such that a student could be placed in them safely. He feared, as things were at the time, that, if all students were encouraged to take internships, many might learn bad habits rather than good medicine from such an experience and might be injured rather than helped.

In this fashion the vexing problem of the internship and its classification first acquired medical publicity.

No doubt there were many in the audience who perceived at once the full implications of what seemed to be in the back of Dr. Herrick's mind. One imagines the applause which concluded his remarks, and the buzz of argument which soon developed in the corridors outside the hall where the meeting was held.

There were several present who were prepared to go even further than Dr. Herrick. They believed not only that the standardization of the internship was desirable but also that their own particular talents and interests made them eminently suited to undertake the task of inspection and classification. It is difficult to conceive of such energetic teachers as Dr. Blumer or Dr. Carlson uninterested in such a presentation; certainly Dr. Zapffe easily perceived that the Association of American Medical Colleges found here a problem close to its heart; Dr. Pusey was not the man to listen to Dr. Herrick's cold and logical condemnation of bad surgical practice in hospitals without at once attempting to do something about it; and Dr. Bevan immediately visualized the standardization of internships as a problem to be faced by the American Medical Association, since it concerned the entire medical profession—doctors, educators, hospital superintendents and possibly those responsible for administering medical licensure.

The aftermath of Dr. Herrick's paper has been most interesting. Hardly another single paper presented at any annual congress on medical education has had such far-reaching results.

Almost immediately the Council on Medical Education of the American Medical Association considered the possibility of classifying hospital internships in much the same manner as had been utilized in the classification of medical schools. In line with this idea, internships were to be classified in A, B and C categories, thereby enabling medical schools and state boards to recommend hospitals in the A group to medical students as being institutions wherein the internship was of guaranteed worth-whileness. In the C group were to be listed those hospitals seemingly incapable of offering an internship which could be regarded as of any educational merit. In the B group would appear hospitals of doubtful strength: institutions wherein a year of residence might be of dubious usefulness though certainly the time spent there would not be wasted.

Medical schools and various state licensing boards soon climbed aboard Dr. Herrick's band wagon. In 1915 the House of Delegates of the American Medical Association was informed that the Licensing Boards of Pennsylvania and New Jersey now required that every candidate to be eligible for license to practice medicine in those states must have served at least one year as an intern in an approved hospital: and six medical colleges had adopted the requirement of a fifth year to be spent by the student as an intern in an approved

Read before the joint meeting of the Council on Medical Education and Hospitals and the Federation of State Medical Boards of the United States at the Thirty-Seventh Annual Congress on Medical Education and Licensure, Chicago, Feb. 18, 1941.
1. Herrick, J. B.: The Educational Function of Hospitals and the Hospital Year, A. M. A. Bull. 6: 105-112 (Jan.) 1911.

hospital or in other acceptable clinical work before the M.D. degree was granted. The medical schools first to take this step were Minnesota, Leland Stanford Jr., Rush, California, Northwestern and Vermont.

While many medical educators believed in the soundness of Dr. Herrick's idea that a required intern year was desirable, there were certain dissenters. At the annual congress in 1916 Dr. James Ewing² of Columbia University read a notable paper which he labeled "Principles and Experiments in Medical Education" and wherein he attacked vigorously the required intern year. He believed that the average hospital always would be unsuited for medical education, that a fifth purely clinical year raised an additional bar against the choice of a career in scientific medicine and that such a year tended to unbalance the medical curriculum by placing excessive emphasis on clinical training. Such a year, to be sure, was likely to help in the making of good practitioners. But to him it seemed an artificial measure designed to deal with the lower strata of student society and nothing more than a means for manufacturing smart young doctors acquainted with little more fundamental in medicine than the jargon of fashionable clinical tests and methods. The accomplishment of this did not appear to him as a progressive step toward the improvement of a good, general medical education.

One phenomenon which Dr. Herrick failed to foresee was the enormous expansion of hospitals which occurred. He was right, however, in predicting that an ever increasing proportion of the better hospitals would quickly realize the impossibility of effective work without the aid of interns.

No sooner did the Council on Medical Education publish its first list of hospitals approved for intern training than a new list was needed. It was a matter of mechanical impossibility during the decade before 1929 to classify internships on the A, B and C basis, since the entire complexion and number of hospitals changed over night.

DIFFICULTIES OF STANDARDIZATION

As hospitals rather than individuals began to play an increasing part in medical practice, Dr. Herrick's original postulate became restated by many doctors in many ways; a universally acceptable means was desirable by which hospitals could be standardized in their ability to offer a satisfactory type of intern training. At the congress in 1919 there was a paper on this matter by Dr. A. R. Warner,³ president of the American Hospital Association. This paper is second in importance to Dr. Herrick's in the history of the confused state of the internship. Here Dr. Warner gave an intelligent analysis of the difficulties encountered in an effort fairly to classify internships and agreed with Dr. Bevan that at least four factors are importantly involved in the process: hospitals themselves, the medical profession, the state licensing boards and the medical colleges. He believed that, in order to make a truly successful classification of internships, all these factors must be dovetailed together and that the interests of each must be recognized.

This paper provoked a great deal of discussion. The upshot was the formation of an organization known as the American Hospital Conference. This was to consist of two representatives each from twelve independent

groups of interested people: the American Medical Association, the American College of Surgeons, the American Nurses Association, the American Hospital Association, the Association of American Medical Colleges, the Federation of State Medical Boards of the United States, the American Association of Hospital Social Workers, the Catholic Hospital Association of the United States and Canada, the American Association of Industrial Physicians and Surgeons and the Medical Departments of the United States Army, Navy and Public Health Service. To this group later were added representatives from the International Compensation Board, the National League of Nursing Education and the National Organization for Public Health Nursing. The conference had the laudable intention of holding one or more meetings each year at which problems relating to the development and standardization of hospitals might be discussed. It formed an executive committee, and this was directed to prepare standards and carry on other essential work.

This association did not function with appreciable effectiveness. It presently changed its name to the American Conference on Hospital Service. It failed to prepare standards of classification unanimously acceptable to its membership. It died a quiet death. If it accomplished anything in the few years of its life, it bought about a sympathetic interest and reasonable cooperation of all organizations of the country which are engaged in various fields of endeavor included in hospital service. Presumably its executive committee, in attempting to prepare standards for classifying internships, was foiled by the chaos that develops when a large number of people of divergent opinion attempts to institute any sweeping reform.

The Council on Medical Education and Hospitals of the American Medical Association in the meantime continued calmly about its business of studying hospitals. The Council became increasingly convinced that the person most interested in the internship problem was the medical student and that one of the essential purposes in providing a classification of hospitals offering internships was to enable each student to select for himself with a reasonable guaranty of safety that institution which would most nearly satisfy his own particular needs. With this idea in mind, year by year hospitals were inspected and if they fulfilled certain sensible basic requirements they were listed as being approved for intern training. Just as in the case of medical schools, the value of classifying hospitals on an A, B and C basis became less obvious and the desirability of a minimum standard toward which any medical school or hospital might aim grew more evident. Internships became increasingly popular and were eagerly sought by each graduating class. The essentials of a Hospital Approved for Intern Training were modified from time to time so that the general level of intern training improved steadily and, on the whole, this method of managing the problem of internships and their classification appeared to yield fairly satisfactory results.

QUALIFICATIONS OF A SPECIALIST

Then came the meeting of the American Medical Association at Philadelphia in 1931. A simple sounding resolution introduced into the House of Delegates by Dr. Carl F. Moll⁴ of Michigan was to be the third great factor in adding confusion to the state of the internship.

2. Ewing, James: *Principles and Experiments in Medical Education*, A. M. A. Bull. 11: 120-128 (Jan.) 1916.
3. Warner, A. R.: *Hospital Standardization*, A. M. A. Bull. 13: 242-260 (Jan.) 1919.

4. Moll, C. F.: *Resolutions on Appointment of a Commission on Qualifications for Specialists*, J. A. M. A. 96: 2114 (June 20) 1931.

Dr. Moll, like many others, was conscious of the growing tendency on the part of many physicians to make self-appointed specialists of themselves. This he believed was an unsound practice and therefore he asked the House of Delegates for the appointment of a Commission on Qualification for Specialists. It was to be the duty of this commission to consider what qualifications a specialist should have and, in general, the type of educational training and clinical experience a man needed in any field before he could be recognized as a specialist in it.

As a result of this resolution the Council on Medical Education and Hospitals was directed to investigate the matter of specialization in medicine in this country and to make recommendations looking to the establishment of proper qualifications of physicians who might wish to be termed specialists. It appeared at once that many people and many organizations were vociferously eager to have a hand in deciding who was a specialist and how he should be made. After a period of struggle the present arrangements of the various specialty boards were duly established and began to function.

Each specialty board has its own peculiarities, but underneath all is a common denominator. To become a specialist, a doctor must have graduated from a recognized medical college and must have served an acceptable internship. On this foundation he must build to become a specialist by spending at least three years in obtaining intensive training in whatever field he selects.

The amazing popularity of the specialty board development has now refocused attention on postgraduate education in hospitals and particularly on the internship and the residency. Once again, as they were thirty years ago, are hospitals, doctors, state licensing boards and medical colleges in the midst of a discussion wherein the classification and direction of the hospital phase of graduate medical instruction appears of paramount importance.

Naturally, the state of the internship is a little confused by the vigorous stirring it has received recently. Yet the situation is not as awkward as it appeared thirty years ago because so much more is known.

Nowadays, of his own volition, almost every graduate of each recognized medical school in the country secures an internship in a hospital approved by the American Medical Association. A young doctor is more likely than not to reside in some such hospital for two or three years or more before he begins to practice. No licensure requirements or medical school regulations can make the internship appear more essential than it is at present.

This fact has diminished the immediate need for state licensing boards to demand an intern year as part of a candidate's credentials for licensure, though the tendency to enforce this requirement is spreading. In 1915, Pennsylvania and New Jersey were the pioneers in the field. Now twenty other states, the District of Columbia, Alaska and Puerto Rico have followed suit. Possibly a factor in retarding the more rapid growth of this movement is the complicated machinery which might be required to enforce it. Naturally, each state is deeply concerned with the qualifications of those whom it admits to practice. Theoretically, a required intern year in a good hospital is ideal. If an intern year was to be demanded by law throughout the country, however, many states might be compelled to make their own list of hospitals whose internships they could approve, and to construct such a list free from possible political criticism would be difficult. In those states

where obvious resources are not at hand with which to perfect so cumbersome an affair, it seems but common sense to proceed slowly and to avoid the risk of legislation which, to say the least, might be difficult to enforce properly.

Medical schools are even more diffident. In 1915 six schools required an intern year before their students received medical diplomas, and now but twelve make this demand. Vermont and Columbia at one time experimented with the plan but abandoned it. Dr. Ewing's argument of twenty-five years ago still has a certain force. But, more particularly, many teachers feel that no medical school can rationally give credit toward a doctor's degree for work not done under its own jurisdiction. Rarely is a medical school able to offer internships of its own, to control the quality of these or even to assure completely satisfactory placement of each of its graduates.

CLASSIFICATION OF INTERNSHIPS

It appears reasonable to conclude from these figures that state licensing boards have faith in a required intern year and in all probability are likely to go forward with it as conditions become suitable. On the other hand, medical educators are dubious.

Nevertheless, the most satisfactory classification of the internships continues to be a lively football which is much kicked about. Certain thoughtful people honestly believe that the internship has now become so important a part of medical education that the approval of hospitals suitable for intern training and the curriculum offered by them most appropriately lies in the hands of the medical colleges. They wish medical schools to prepare a list of hospitals to which students can be recommended safely with assurance that in these institutions a more or less rigid teaching program will be effectively carried out. In this fashion they hope that a well organized educational experience can be made of the internship which will formally introduce young doctors to the importance of a continuing postgraduate education. By this means they believe that the general level of medical practice throughout the country will be raised.

Other equally thoughtful people take a more conservative view. They believe that the process of undergraduate education in medicine already is sufficiently long. They do not perceive the wisdom of attempting to make of the internship a discipline that is in large measure academic. They prefer still to regard the internship as the young doctor's first great clinical opportunity, where, under the guidance of a competent preceptor, he stands on his own feet, begins to make decisions for himself and in this way acquires practical knowledge more rapidly and surely than by any other means. Those who have this philosophy do not wish the internship or what it teaches to be rigidly standardized by any single group of doctors. They think that except within broad limits the internship should have no fixed pattern. In brief, to them what amounts to free choice of internship in any institution whose basic respectability is assured seems as important for a young doctor as is free choice of physician to a patient.

The real point at issue appears to lie in whether or not the method of classifying hospitals approved for intern training utilized by the American Medical Association can be improved. Those who wish to have a new list of hospitals appear to give little weight to the experience of the Council on Medical Education and Hospitals in the field of hospital inspection and place

little emphasis on the value of the Council's carefully developed impersonal method of periodic hospital examination. With this point of view I myself have no sympathy.

A few years ago the Massachusetts Medical Society studied critically hospitals in Massachusetts by inspection and through data from surveys forwarded to the society by the council. One could not help but realize that hospitals in this state approved for intern training were not all of the same caliber; they fell into three easily separable groups. The A group offered the best internships and trained the fewest men; the C group offered the worst internships and trained the greatest number; the interns in the A group were in the main the best scholars, and the interns in the C group were from the lower ranks. No doubt an experience such as that of Massachusetts is almost universal.

Without question, medical schools owe their students the best possible advice in regard to choice of internship. The importance of the internship as a base from which to begin the practice of medicine cannot be over-emphasized. At the Harvard Medical School for many years an account has been kept of hospitals in which our students have interned, of the value of the experience from our students' point of view and of the impression made on various hospital staffs by Harvard men. Most of the hospitals in which our students have been trained have been approved by the American Medical Association; a certain number on the approved list have seemed unsatisfactory and our students have been advised to avoid them; and a very rare hospital not approved for intern training has offered some particular type of opportunity which certain students have been advised to seize. It seems perfectly sound for each school to have a confidential hospital list of this nature for its own purposes.

If, however, an appreciable number of hospitals with internships now approved by the Council were to be picked out in some arbitrary manner and announced publicly as henceforward being no longer approvable for intern training, unnecessary confusion and hardship would result. The fact of the matter is that there are not enough internships of highest quality to meet the demand of all candidates who wish to acquire them. There never will be so long as hospitals regard the care of the sick as their first duty and the education of young doctors in residence as of secondary importance. The best internships are bound to be limited in number and to be awarded to those applicants who appear most competent; no other intern policy is honest. The stronger hospitals will not accept second-rate material. But unfortunately medical students do not all have the same native ability, so that those unable to obtain first-class internships will be compelled to take others less good so long as the desire for some kind of an internship appears as important as it does at the moment.

Hospitals have a distinct advantage in that candidates applying for internships must be graduates of an approved medical school. In order to be equally fair to interns, to protect good students from going to poor hospitals and to help poor students in obtaining as good hospital appointments as they can, hospitals too must be approved.

Hospitals as well as students are annoyed and displeased by a multiplicity of surveys and inspections. In order to avoid a further stride of confusion in the mat-

ter of hospital internship, I believe there should be but one limited list of hospitals approved for intern training. This list should include all institutions which do not exploit interns, which maintain a high quality of professional work and which stimulate interns in the acquisition of knowledge. To prepare and keep up to date a list of this nature is an elaborate, painstaking business. So long as the American Medical Association continues to maintain one as intelligently as it has for the past thirty years, no other classification is particularly needed. For as Dr. Warner pointed out, twenty-two years ago, there are four factors involved: hospitals, doctors, state licensing boards and medical colleges. Any successful classification of hospitals must dovetail together all these factors. The American Medical Association is the most representative body of this profession to appraise so hard a task in a wholly disinterested manner. It is the one body in the country with resources and machinery to do the work well.

319 Longwood Avenue.

PURPOSE, CONTENT AND METHODS OF TEACHING PUBLIC HEALTH TO MEDICAL STUDENTS

HAVEN EMERSON, M.D.
NEW YORK

DEFINITION AND PURPOSE

A definition of the practice of public health which suits my present purpose and will stand on its merits under the circumstances is: The application of the sciences of preventive medicine through government for social ends. The public health is but a convenient expression of the collective health of the members of the community, the social aggregation of families or households under some civil government jurisdiction.

Medicine and biology created a precedent when about a hundred years ago they entered on a career as servants of government, with functions defined by statute law and supported by tax revenues. For the first time the sanitary protection and health status of man and his wife and children became an object of the official solicitude of statesmen and of local government. Persons and their well-being as well as the safety of their material possessions and property were to be protected. This was a new motive in the progress of representative government toward social usefulness and came some hundreds of years after government accepted responsibility for care of the poor in sickness. Organized care of the sick by institutions and agencies, one of the two large fields of administrative medicine, was not then included in the field of public health and is not dealt with in our discussion of the present topic.

It was the impersonal *societas*, the community, the *demos*, the commons, the crowd of people, that was to be guarded and benefited by public health services, rather than the individual citizen, whose personal health was a coincidental object or necessity. We of the schools of medicine have been involved in this expanding function of government because both the leadership and the laborers of preventive medicine required additional basic sciences, and disciplines in fields of

knowledge not previously indispensable to the individual servant of the sick, for whose laboratory and clinical education we had been responsible. Our graduates found themselves ill equipped in several fields of administrative and public medicine where new opportunities awaited them.

About the time when the universities first offered postgraduate courses in science and vocational training to physicians and others who intended to engage in the career of public health, the conviction was becoming general that further and immediate progress in the health of the community, and probably the optimum practical benefits from public promotion of health under our form of government would depend to an increasing degree on the personal services, professional advice and opinions of the family physician.

The obligation of medical faculties was acknowledged to provide time in the medical curriculum and teachers to deal with those sciences and skills recognized as necessary for an understanding of the problems, the methods, the resources and results of preventive medicine as this can be made useful through civil government.

CONTENT

The additional basic sciences and accessory disciplines indispensable to the understanding and use of our present knowledge of public health are three: medical or vital statistics, environmental sanitation, including so-called industrial or occupational hygiene, and epidemiology.

The subject matter of these major building blocks of the practice of public health is not appropriate to any of the standard departments of the usual medical school of today, although each may be touched on and used for illustration or example in various laboratory and clinical courses. Without these three, only a trivial and cursory descriptive introduction to the superficial aspects of public health of a popular character can be presented to the student of medicine.

With these suitably included in the medical curriculum the physician can continue to grow in the intellectual and practical use of all his other information and skills which contribute to the improvement of collective as well as of individual health.

Existing departments of the medical schools of today, whether here or abroad, can deal with all the other factors which touch on or have been incorporated into the public or governmental functions of preventive medicine. Until and unless the well established departments of a modern school of medicine deal each in turn with the theoretical and practical applications of their respective subjects to the prevention of disease and the development of health and its improvement or protection, there is no good sense in adding to the former curriculum an embroidery of so-called public health, hygiene or preventive medicine.

Each basic science in the first two years, particularly physiology and bacteriology, is crowded with information, with theory, with practice directly contributory to a sound understanding and use of preventive medicine, whether of individual or public concern. If the opportunity, the incentive, the application is lost while the laboratory sciences are taught, these cannot readily be recaptured in a course in public health when there is not time, equipment or state of student mind to profit by a review of those aspects of the laboratory subject which are of special interest or necessity for an organized health service.

In the first year preferably and certainly before the end of the second year at the medical school, the student should have presented to him the principles involved in the description, interpretation, analysis and evaluation of facts which can be expressed mathematically. The substance of medical statistics will include the theory of probability, the significance of data, the logic of the statistical method, the distinction between an isolated observation and the weight of evidence of mass phenomena, the truth that statistics prove little, and that rarely, but that their use reveals trends and probable truths which can be tested critically by controlled experiment.

It is when the student is in the midst of experimental data dealing with accumulated records of anatomic, biochemical and physiologic facts that he first needs the discipline of the statistical method to save him time, to sort out relative truths and values, to refine the sharp edge of quantitative methods, to learn what chance variation means before he is faced with the loose quotations and opinions of clinicians who so rarely show a reasonable respect for evidence beyond that of the one patient in hand.

So much of the material accessible only through official public health channels is to be understood and safely used with the aid of rigorous mathematics that medical science statistics, whether vital, natal, mortal or merely morbid, must be mastered in its simplest terms early in the medical curriculum to become a familiar usable tool whether in calculating calories, drug dosage, heat loss, heart power or calcium deficit, or secular trends of diseases and deaths.

It is not enough to learn the use of a slide rule, now an almost universal high school gadget. The course in vital or medical statistics must be presented by a master, with the imagination of a professional gambler and the experience of a civil engineer, an epidemiologist or a biophysicist. It is unusual to find such a person either intellectually equipped for the job or with the inclination to deal with the numerical expression of facts, rather than with their creation from clinical or experimental observation, among the teaching staff of a medical school. When the right person is found he will require space, time and equipment for some laboratory work, using data already familiar to the students from their basic science courses or such as they are certain to meet in their expanding acquaintance with series of institutional patients, with medical publications and through the grist of health department records.

This teacher of vital statistics to medical students will, it seems to me, be an increasingly indispensable member of the society of scholars, the *collegium* which we like to think our medical faculty actually is. If he were used by clinicians before they arrive at conclusions of therapeutic triumph on their first seventeen patients, or assume a falling case fatality percentage based on one winter's experience with pneumonia, there would be less irresponsible medical publication.

Another contribution to the education of medical students in public health by persons of other than medical origin must be that of sanitation in its strict and correct sense, the science of environment as this affects the health of man. Environment, be it physical or biologic, all of man's material envelop except that created by the social and psychic atmosphere of fellow man, is not dealt with except casually and in an amateurish manner by any of the standard departments of our medical schools. I am not referring to plumbing fixtures

or street cleaning, nor yet to the covering of ash and garbage cans, but to an objective scientific study of the evidence of cause and effect by which man's health of body and even of his mind is in any respect affected by conditions of material environment. Air, light, water, foods, particularly milk, waste disposal, occupational hazards, vermin and insect control in relation to communicable disease, together with noise and the resources of engineers and administrators by which man as a congregating animal may be spared the damages potential in his own swarming and hiving; these are the subject matter of sanitary science. Not only are the principles to be dealt with, but examples of control in action are to be observed, and the statistical, historical and epidemiologic results of measures such as water and sewage purification, pasteurization of milk, mosquito control and air and light conditioning are to be proved from official and experimental records. As the physician in the sciences is in debt to the medical statistician for putting evidence on a quantitative basis, so the profession of public health and the practitioner of individual medicine are beholden and deeply grateful for the mastery of environment by engineers whether of the civil, chemical, electrical or general sanitary specialty. These features of public medicine should be familiar to the embryo doctor before he becomes an egocentric wielder of stethoscope and scalpel satisfied that he has labeled and healed a sickness in a man.

This course in sanitation will call into the faculty of medicine a sanitary engineer, a nonmedical sanitarian, and should certainly follow physiology and bacteriology and biochemistry, and preferably precede the major clinical teaching of medicine and surgery. Such a course can hardly be offered without involving that composite subject generally called Industrial Hygiene, a poor hybrid label for what is one part environmental sanitation of occupations and one part the hygiene or personal physiology of the workman himself. Under favorable conditions of time and teachers these two parts will be dealt with by a physician with special experience in physiology and pathology, who has applied his science of sanitation to solving the riddles of disease or disability of human function and structure in factory and shop, counting room and commercial office, mine, farm or construction gang. It is perhaps too much to expect that in our proposed introduction to the content of the public health there should be two courses, one in general and one in industrial sanitation, but if you will look about you today, listen to the calls for physicians to supervise the health of defense production plants, and note the quite insignificant minority of workers of any category for whom there is any medical buffer between them and the hazards of their job, you will, I think, see the logic of the demand for more liberal provision in the curriculum for industrial sanitation and the hygiene of the worker as part of the teaching in public health.

Before we can consider the place and functions of epidemiology, which may be thought of as the third new topic, the capstone of the educational structure of public health, we must make some stipulations as to the broadening of the teaching and scope of each of the clinical departments, whether the big five of medicine, surgery, obstetrics, pediatrics and psychiatry or their specialty subdivisions.

It is not suitable from any point of view to have the preventive aspects of any clinical department dealt

with in a systematic manner in a department of public health. Unless in medicine, surgery, obstetrics and pediatrics the preventive aspects of disease are dealt with there is but a forlorn hope that any devotee of public medicine can inculcate ideas after the hero of the amphitheater has ignored the matter.

The question of when and by whom preventive clinical medicine is to be taught may be said to have been permanently and definitively answered by the progressive, liberal, social and constructive attitudes of the departments of obstetrics and pediatrics, from which progress in public health has benefited more, in theory, practice and results, than from all the rest of the fields of clinical medical practice.

Where shall the student learn of maternal mortality, its extent, its trends, its causes, means of abatement and social significance, if not from the professor of obstetrics? Where will the promise and limitations of antepartum care be better taught than on the lying-in service and its prepartum and postpartum outpatient classes? How better illustrate the social slaughter of abortions and the effect of contraceptive information on their prevalence than by clinical observation in the gynecologic service? The public health teacher may emphasize statute law that calls for premarital and antepartum serodiagnosis and show what has been the declining trend of congenital and conjugal syphilis but venereal disease control is first, and always, an individual clinical job of the physician with his patient.

Without laboring the point through pediatrics, orthopedics, dermatology, ophthalmology and other fields, let me say once for all that no clinical subject is well taught unless the student leaves his patient, the disease under discussion or the topic as a whole with a clear picture of what might and should have been done to prevent the disease, so far as our knowledge permits us to know and our resources to apply this.

The first and last eagerness and worry of the student should be on the score of preventability, once he has understood the diagnosis and done his best at treatment of the patient and the disease. No teacher of the disease entity should feel free to close his chapter or lecture without expressing his opinion and giving good evidence as to the preventability or otherwise, practical or only theoretical, of the disease under discussion. The curiosity of students should be particularly aroused by any disease which they cannot yet classify as preventable.

General or internal medicine and surgery have not regularly dealt with the preventable aspects of the sickness they present. By the admission of the teacher of public health into the clinical amphitheater in some medical schools to deal with the public, the social, the preventable, the epidemiologic aspects of the patient's condition, a beginning has been made, and by the increasing emphasis of surgeons on the origins, preventable causes and public concern with cancer there has been real progress in incorporating the public health aspects of medical service in the teaching of diagnosis and treatment of the patient in hand.

When the medical student in the fourth year has had his vital statistics, his environmental sanitation and some comprehension that medicine as it may be practiced should include knowledge of the incidence and prevalence and preventability of disease among particular categories of the population, he should have an introduction to epidemiology, not only as a method inherent in the study and control of communicable diseases, but

as a science of the natural history of diseases and human disabilities as these express themselves among groups of persons, the mass phenomena of illness as human, social, communal, racial and national experience, not only its manifestations in the cell, the organ, the tissue or body of the particular patient but as it may be expected to appear to the statesman, the sociologist, the historian, the geographer and the anthropologist. Furthermore, the science and art of epidemiology should be revealed by examples of its use in measuring and to a large degree controlling the conduct of public services for health.

Wherever the medical graduate may settle for his career, he must be aware of the health status of his local community, state or nation, to become an understanding observer of morbidity, mortality and natality experience and of their relation to the well-being of his own professional clientele. These should be part of the subject matter to be presented under the title of epidemiology and public health service, preferably by a teacher matured in the practice of public health who has had personal responsibility within government for epidemiologic and administrative duties.

METHODS

As for the methods of teaching public health to medical students there are limitations but few novelties, for they will be found to be those familiar to medical educators from the beginning, namely description, demonstration, experiment, discussion, independent study and observation. The most serious inadequacies of much of the teaching have been the popular rather than a professional presentation of the subject matter by a series of lecturers concerned with promotional undertakings in restricted fields of health, the use of lectures almost exclusively, and these designed to inform and entertain the students rather than to supplement laboratory and practical contact with the actual services of public health by educational disciplines not previously included in the curriculum.

In the teaching of elementary, or shall we say basic, medical statistics, laboratory methods will give the soundest and most enduring results. Material can be drawn from many fields already familiar to the medical student. Class and section periods devoted to applying the simple mathematical disciplines required in the competent and responsible use of rates, trends, probabilities and chance variation will have to be combined with section conferences where the principles are explained and the student's understanding of them tested. The chief item of equipment beyond tables, chairs and the students' own slide rules will be multiple copies of such original records of phenomena as are likely to be assembled by the individual in laboratory or clinical practice, and such as are the basis of incidence, prevalence, morbidity, natality, mortality and other rates in common use in public health.

Examples of the futility of premature presentation of records of an insufficient number of cases to carry conviction pro or con are readily available. In a university medical school where there is a systematic annual medical examination of students and the teaching staff, and record of dispensary and infirmary services for a considerable body of men and women, something closely akin to community health statistics can be had over such periods of years as to be adequate for almost any of the needs for teaching medical statistics.

When environmental sanitation is dealt with in the second or third year of the medical curriculum there is a wide range of choice and opportunity for selection of methods and subject matter which will be determined largely by the teacher. Lectures there must be as the subject matter lends itself to methodical sequence of presentation. Class room illustration is relatively easy by the pictorial method of charts, slides, films and models. The choice of special importance will be in regard to excursions, visits to sanitary engineering installations, industrial plants, water works, pasteurization and other food establishments, and in respect to what is described as a sanitary survey of an area, district or community. Both of these teaching methods take an amount of time out of proportion to their educational results for medical students.

During the fourth year, when the student has clearly in mind the preventive aspects of the clinical branches of medical practice, the subject of epidemiology should be presented in a way to illustrate its usefulness in studying the natural history of disease and as a tool to serve the needs of the health officer, with which the physician in private or institutional practice is also intimately concerned.

There should be included at this time a brief description of the basic legal authority, the usual form of organization, the functions and the results of federal, state and local health services, together with explanation of the reciprocal legal and professional obligations in the interest of public health between the medical practitioner and the health officer.

TIME REQUIRED

There will be needed, preferably in the first year, not less than ten two or three hour periods of combined or consecutive lecture and laboratory work for medical statistics, in fairly close sequence rather than scattered over the whole academic year. There will be needed in the second rather than in the third or fourth year from ten to fifteen hours of lectures and class demonstrations on environmental sanitation. There will be needed in the third year as much as thirty hours of supervised observation of field and office functions of the local or state health department, including at least the bedside care, health education and control functions of the visiting and public health nurse, school health services and the sanitary, communicable disease and vital statistics services of the department of health. There will be needed in the fourth year thirty hours for lecture and discussion of epidemiology and the functions and results of public health service.

A total of ninety to one hundred and five hours spent on public health is sufficient to put into the medical curriculum that content necessary for the practitioner of medicine, fifty-three to fifty-eight hours being devoted to lecture periods and thirty-seven to forty-seven to field work.

It will be noted that there are not included in this teaching of public health such topics as medical economics or sociology, sickness or medical indemnity insurance, hospital or dispensary management, medical social service or welfare and relief functions of civil government, for which provision should be made, if at all, elsewhere in the medical curriculum.

A method used with especial success at the College of Physicians and Surgeons of Columbia University over the past twenty years to enlist the personal interest of each student in the application of the science of public

health to the problems which are of present concern to him is the guidance of the student in a study and report on some question of the preventability or prevalence of a disease, which the student chooses independently. The presentation of such reports before the class during the fourth year lecture periods on epidemiology and public health have been educationally productive to a high degree.

The joint medical and public health clinic as initiated and described by Leathers and Robinson at Vanderbilt University is another teaching procedure which should become as general as the clinical-pathologic conference.

One of the technical difficulties which the teacher of public health must try to overcome is that he cannot bring the student and the public, the community as a patient, face to face. He must avail himself of current reports, of epidemics, of administrative episodes or efforts at prevention and control, and evidence of success or failure to use the recommended procedures and resources to avoid disease, as these appear in official records and documents. The community as a patient or object of medical diagnosis and protection must be made real to the student.

SUMMARY

1. The purpose of teaching public health to medical students is primarily to make them so well acquainted with the group or social manifestations of disease and the methods of its prevention, and of the promotion of health by use of the medical sciences through government, that he will be a better physician and a more effective collaborator with the civil health authorities.

2. The content should include, beside the preventive and constructive health aspects of each of the basic science and clinical departments, the additional educational disciplines of medical statistics, environmental sanitation and epidemiology.

3. The methods should include, besides the lecture, conference and discussion, laboratory work in statistical practice, observation of public health services in field and office, individual study and report projects on the prevalence and prevention of disease, and study of such standard textbooks as those of Rosenau, Mustard or Smillie, and such periodical publications as bulletins and reports of public health departments.

Without teachers as qualified in the fields of biostatistics, sanitary science and epidemiology as are the faculty representatives of the other departments of the college of medicine, a university cannot assume that it has met with educational adequacy its obligation toward the student of medicine or to the public expecting preventive as well as curative services.

600 West 168th Street.

Cancer.—At one time chimney sweeps headed the list of cancer death rates. This is no longer the case, mainly because they had been able to adopt higher standards of cleanliness. But their death rate from cancer is still far above the average. Fifty years ago the chimney sweep's black skin was regarded as a joke. We now realize that if a sweep has to live in a house without proper washing arrangements he is probably condemned to death from a particularly unpleasant kind of cancer. Gas workers are affected in a rather similar way. The substances in soot and oil which cause cancer were isolated by Professor Kennaway of the London Cancer Hospital; and his colleague Cook discovered their exact composition. It is now possible to test lubricating oils for their presence.—Haldane, J. B. S.: *Science and Everyday Life*, New York, Macmillan Company, 1940.

EARLY DIAGNOSIS OF MALIGNANT METASTASES TO THE SPINE

A CLINICAL SYNDROME

SAMUEL A. WOLFSON, M.D.

SAMUEL REZNICK, M.D.

AND

LEWIS GUNTHER, M.D.

LOS ANGELES

Adequate roentgen therapy of malignant metastatic lesions often produces such dramatic relief of pain and such remarkable regression of the lesions that the evaluation of early findings related to pain, erythrocyte sedimentation rate and serum phosphatase level is worthy of discussion and clarification.

Since roentgen ray therapy is the only hope for successful treatment, an early diagnosis becomes imperative. The feeling of many physicians concerning the possibilities of an early diagnosis and the successful treatment of demonstrable malignant metastases to the spine has been, unnecessarily, one of pessimism and futility. Our observations disclosed certain constant features attending metastatic lesions in the vertebrae. An accurate diagnosis can be made long before roentgen ray evidence is present. The constant features mentioned suggest a syndrome based on (1) the character of the pain, (2) the changes in the erythrocyte sedimentation rate and (3) the level of the serum phosphatase.

EVALUATION OF ROENTGEN RAY DIAGNOSIS

In most patients osseous lesions become massive and widespread before they become roentgenologically apparent. The reasons for this are evident after a study of roentgen ray density of bone is made. Snure and Maner¹ have shown that practically all of the spongiosa of a vertebral body can be replaced by metastatic tissue without evidence of the lesion demonstrable by means of roentgen rays. They have also shown that there is no roentgenologically detectable difference in density of bone until at least 1 sq. cm. of the cortex is destroyed. Even then the lesion is not apparent unless the central rays pass through the long axis of the defect. This explains Lawton's² failure to obtain positive roentgen evidence in involved bones removed at autopsy, because in no instance had the cortex been destroyed. As recently as 1938 he² stated that the diagnosis of metastases to bone could not be made without positive roentgen evidence and that when permission for autopsy is refused the diagnosis can never be confirmed. This is true only if roentgen diagnosis is used to the exclusion of all other diagnostic methods.

It is obvious from the foregoing statements that when roentgen evidence of metastasis is demonstrable the lesion is advanced and probably diffuse and the optimum time for treatment has passed.

From the Medical Clinic of the Cedars of Lebanon Hospital.

Presented before the staff meeting of the Cedars of Lebanon Hospital May 15, 1940.

Dr. Jacob Abowitz and Dr. C. K. Emery of the roentgenologic service, gave cooperation which made this study possible.

Drs. Wolfson and Reznick are clinic assistants at the Cedars of Lebanon Hospital; Dr. Gunther is adjunct physician to Cedars of Lebanon Hospital and assistant clinical professor of medicine, College of Medical Evangelists.

VALUE OF THE ERYTHROCYTE SEDIMENTATION RATE

The value of the erythrocyte sedimentation rate in various conditions³ is too well known to warrant comment here. However, its correlation with the presence of metastatic lesions has received relatively scant attention. Schiller⁴ has stated:

If a malignant growth be removed operatively, the sedimentation rate should return to normal within six weeks if complete removal has been obtained. If the rate returns to normal and remains normal at least six months, one may give a guardedly favorable prognosis. If the rate becomes abnormal within this time, it is suggestive of local recurrence of the growth or metastasis.

In a series of 62 carefully studied case histories Kaump, Heck and Bannick⁵ showed a remarkable correlation between metastatic involvement of bone and increase in erythrocyte sedimentation rate. In the case reports of Swenson and Holzman⁶ and Kaump, Heck and Bannick⁵ and the Cabot case 24301,⁷ the diagnostic value of an increased sedimentation rate is further emphasized. It was the only positive laboratory finding in obscure diagnostic problems in which, finally, roentgen or autopsy studies proved the presence of metastatic lesions of the bones.

VALUE OF STUDIES OF SERUM PHOSPHATASE

A significant finding in cases of metastases to bones is an elevated phosphatase content of the blood serum. Excellent discussions of the changes in the serum phosphatase in other conditions may be found in the reviews of various authors.⁸

When roentgen studies are of diagnostic value two types of lesions are encountered: (1) evidence of increased osteoblastic activity, as indicated by localized areas of increased density due to increased calcification;⁹ (2) localized rarefaction, indicating increased osteolytic and osteoclastic activity with decalcification.

With metastatic lesions of bone which result in increased, localized calcification (increased osteoblastic

activity) the serum phosphatase levels are almost always elevated.¹⁰ With destructive (osteoclastic) lesions, while the serum phosphatase values may be normal they are frequently elevated.¹¹

EVALUATION OF PAIN

Pain, as with tumors of the spinal cord and its nerve roots,¹² is often the earliest, most outstanding and most compelling symptom of spinal metastasis.¹³ This pain has definite recognizable characteristics. It is a root, or radicular, pain. It is almost always limited to definite segments, or dermatomes, supplied by the nerve roots exiting through the foramina formed by the involved vertebrae. The pain is aggravated by coughing, sneezing, yawning, straining at stool, bending movements of the spine or sudden jarring of the body.

The similarity of this pain to the root pain of arthritis of the spine is so great that these two conditions have frequently been confused.¹⁴ However, a careful analysis will usually reveal distinct differences:

1. In arthritis the painful root zones cover wide areas and include several dermatomes. Thus the patient outlines a wide zone of radicular distribution. More than one area may be painful simultaneously. Thus the cervical roots covering the entire shoulder girdle and outer side of the arm may constitute one region. A wide zone of root pain may also be present over the abdomen and back between the xiphoid and the umbilicus, with radiation to the back. Or the entire precordium may be included in a wide root zone on the left side of the chest and back.¹⁵ Contrariwise, the root pains associated with early metastatic lesions of the vertebrae occur in very narrow zones, limited to two roots or possibly one root. Thus the zone of radiculitis, or the painful zone, is confined to a relatively narrow area supplied by the nerve roots adjacent to the vertebra or vertebrae that are involved. The limitation of the pain is so sharply defined that (as in our case 2) the narrowness of the painful area might easily be mistaken for a localized intercostal myositis or neuralgia.

2. Arthritic pains have a periodicity and rhythmicity which depend on mechanical factors, associated with movements of the spinal column, and meteorologic conditions, such as sudden changes in the weather. The root pain of metastatic lesions is constantly present and unmitigatingly intense and is not influenced by climatic changes.

3. The person with arthritis who suffers root pain is constantly turning and changing his position in bed because motion affords relief. The sufferer with metastatic lesions is reluctant to move or turn once he finds a comfortable position in bed, because motion aggravates the pain. If he cannot find a comfortable position in bed he may pace the floor or do his sleeping upright in a chair, as do many patients with nerve root and cord tumors.

An outstanding difference between the radiculitis of arthritis of the spine and that due to metastatic lesions is the presence or absence of localized tenderness to percussion over the spinous processes. In the former condition deep percussion over the spinous processes of the suspected vertebrae does not elicit local tenderness and pain. In the latter condition percussion tenderness is a constant sign. The superficial hyperesthesia of the skin, which is best elicited by pinching or by light pressure anywhere within the painful spinal segment, must not be confused with the deep tenderness elicited by percussion (see table).

Patients with Pott's disease or other destructive processes of the bodies of the vertebrae (excluding Charcot's disease) may exhibit percussion tenderness, but their condition is easily differentiated from metastatic lesions by characteristic history and physical stigmas.

REPORT OF CASES

CASE 1.—*Diagnostic value of root pain with localized tenderness to percussion, an elevated phosphatase level and a rapid sedimentation time.*

L. L., a white woman aged 73, first appeared at the medical clinic in January 1938, complaining of a mass in the right

Important Differential Findings in Spinal Metastasis and Spinal Osteoarthritis

	Spinal Metastasis	Spinal Osteoarthritis
Distribution of peripheral pain	Usually limited to narrow zones of one or two nerve-roots' distribution	Usually covers a large number of spinal dermatomes, with wide areas of distribution
Periodicity and rhythmicity of pain	None; constantly present and intense; relief only by roentgen ray therapy	Influenced by meteorologic conditions; relief by analgesics, vitamin B ₁ and physical therapy
Effect of motion on the pain	Aggravates and intensifies the pain; patient shows reluctance to move once a relatively comfortable position is attained	Tends to relieve the pain; patient is constantly turning and changing position because motion affords relief
Deep percussion tenderness	Percussion tenderness over the suspected vertebrae is a constant sign	Percussion tenderness is not present; cutaneous sensitivity may be present
Sedimentation rate	Increased, usually greatly so	Not increased
Serum phosphatase	Increased, or increasing; above 4 Bodansky units	Not increased

breast. Her history included pain in the lower part of the back of three years' duration. The pain was not severe; there was no radiation, and at varying intervals the pain would spontaneously subside.

The mass in the breast proved to be a *scirrhous carcinoma*. Roentgenologic investigation revealed no evidence of metastasis to bone. The patient refused surgical intervention and was treated with radium.

She was symptom free until May 1939, when she complained of severe and constant pain in the lumbar region, which radiated bilaterally to the outer sides of the hips and thighs. Percussion over the lumbar region revealed a sharply localized area of deep tenderness over the second and third lumbar vertebrae.

The serum phosphatase level was 11.8 Bodansky units (the upper limit of normal is 4.0 Bodansky units in our laboratory), and the erythrocyte sedimentation rate was 12 mm. in fifty-four minutes (Linzenmeyer: normal 12 mm. in one hundred and

Fig. 1.—Subjective pain distributed in narrow radicular zone of dorsal root 12 and lumbar root 1. Localized tenderness to deep percussion was present over the spinous process of the upper lumbar vertebrae.

twenty minutes). Three weeks later the serum phosphatase level was 15.1 Bodansky units and the sedimentation rate remained at 12 mm. in fifty-five minutes. Roentgen ray studies did not show metastases. However, in view of the aforementioned findings a positive clinical diagnosis of metastatic involvement of the second and third lumbar vertebrae was made.

In July 1939 definite roentgen ray evidence of an osteoblastic type of metastatic lesion of the second lumbar vertebra was reported. The patient received roentgen irradiation and experienced relief of her symptoms. By March 1940 she was feeling well. The deep tenderness to percussion and the radiculitis were gone. The serum phosphatase level had fallen to 8.6 Bodansky units. The sedimentation rate had returned to 12 mm. in one hundred and twenty minutes.

CASE 2.—*Diagnostic value of root pain with localized tenderness to percussion and an elevated sedimentation time.*

T. S., a white woman aged 43, entered the medical clinic in September 1937, complaining of a mass in the left breast. This proved to be an adenocarcinoma with axillary metastases. Roentgenograms of the bones showed no metastases.

After preoperative irradiation a radical mastectomy and removal of the axillary glands was performed in January 1938. This was followed by postoperative irradiation.

In January 1939 the patient complained of pain in the posterior portion of the neck. The pain was constant and severe and continued, with negative results of serial roentgen studies until May 1939, at which time a pain in the left side of the chest became localized anteriorly at the level of the fourth interspace. There was deep percussion tenderness over the first three dorsal vertebrae. The sedimentation rate was 12 mm. in eighteen minutes. In spite of the negative roentgen findings a diagnosis of spinal metastasis was made.

By June 1939 there was pain also in the anterior right portion of the chest at the level of the fourth interspace radiating around to the back. The pain was severe, constant and aggravated by motion and coughing. Roentgen ray studies were again negative.

In August 1939, seven months after the initial appearance of the symptoms, roentgen study revealed a pathologic fracture of the sixth rib on the left side and compression of the third dorsal vertebra.

The patient was placed in an institution and died in November 1939. An autopsy was not done.

CASE 3.—Diagnostic value of an elevated phosphatase level of the blood and a rapid sedimentation time.

R. S., a white woman aged 47, who had a known carcinoma of the breast, came to the clinic Oct. 9, 1939, because of severe dyspnea and increasing weakness of two weeks' duration.

Examination revealed her to be obese, weak and dyspneic. Many petechial and large hemorrhagic areas of the skin were present. The mucous membranes of the mouth bled easily on light pressure.

The patient was admitted to the Cedars of Lebanon Hospital the same day. Laboratory examination revealed severe anemia and thrombopenia. A diagnosis of metastasis to bone marrow was made. The serum phosphatase level was 18.6 Bodansky units; the erythrocyte sedimentation rate was 12 mm. in nineteen minutes. Serial roentgen ray studies of the bones, however, constantly gave negative results. The patient died three weeks after admission.

Autopsy (performed by Dr. M. Pizer) revealed diffuse metastases to the bone marrow, including that of the spine.

CASE 4.—Diagnostic value of root pain with localized tenderness to percussion, an elevated sedimentation time and increasing levels of serum phosphatase.

S. S., a white woman aged 45, came to the clinic because of a mass in the breast. This proved to be a scirrhus carcinoma. A radical mastectomy was performed in July 1936, two weeks after the tumor was first observed at the clinic. The patient was given a complete course of postoperative irradiation.

In January 1937 there was no evidence of recurrence or metastasis. The patient felt well and gained so much weight that a reducing regimen became necessary.

The patient remained well until March 1939, when she complained of severe pain, localized in the right shoulder and most intense at the joint. There was deep tenderness over the biceps and deltoid regions. The usual measures used in treatment of arthritis offered no relief. The pain remained severe and constant. Roentgen studies gave negative or doubtful results. The sedimentation rate was 12 mm. in eighteen minutes. In spite of the negative results of roentgen examinations, a positive diagnosis of metastasis to the head of the humerus was made.

In July 1939 a roentgenogram revealed an osteoclastic type of lesion involving the head of the humerus. The serum phosphatase level was found to be normal (2.3 Bodansky units).

Fig. 2.—Subjective pain distributed in narrow radicular zone of dorsal roots 3 and 4. Localized tenderness to deep percussion was present over the spinous process of the upper three dorsal vertebrae. An area of subjective pain and of local tenderness to pressure was present over the sixth rib seven months before the roentgen examination disclosed a pathologic fracture.

In October 1939 the serum phosphatase level was 3.1 units. The patient was receiving roentgen irradiation, which was followed by relief of the symptoms and regression of the lesion.

Dec. 21, 1939, the patient complained of pain in the lower portion of the back with radiation along the course of the second lumbar nerve. There was deep percussion tenderness over the second lumbar vertebra. The results of roentgen

examination were negative; the sedimentation rate was 12 mm. in twenty-nine minutes; the serum phosphatase level was 4.8 units. A clinical diagnosis of metastasis to the spine was made. The patient received radiation treatment.

The patient was admitted to the hospital because of continuation of symptoms. Roentgenograms revealed metastases to the lower portion of the spine and to the pelvis. The sedimentation rate was 12 mm. in twenty-two minutes, and the serum phosphatase level was 6.0 units.

Fig. 3.—Area of subjective pain over shoulder joint and localized points of tenderness to pressure. Subjective pain of radicular distribution was present over the second sacral root and localized tenderness to deep percussion over the lower lumbar vertebrae.

Under roentgen treatment the patient's symptoms improved. However, the sedimentation rate remained elevated at 12 mm. in twenty-nine minutes, while the serum phosphatase level dropped to 4.2 units.

COMMENT

The diagnosis of metastases to bone prior to the appearance of roentgen evidence has been difficult. Too often have spinal lesions had to await positive diagnosis by the roentgenologist or the autopsy surgeon. This has been true even in the presence of a known primary lesion and a clinical picture suggestive of metastases. Early roentgen ray therapy is such an important agent in the relief of symptoms, regression of the lesion and the prolongation of life that a means of early diagnosis of metastases is imperative.

Modification of the hemogram¹⁶ has been used as a diagnostic aid, but modifications of the blood are not sensitive enough for early diagnosis and are only to be seen when metastases are quasitotal.¹⁷

The erythrocyte sedimentation rate is not subject to such limitations. The change in rate appears as a sensitive reaction to the presence of a new growth and reaches a maximum quickly. The rate does not increase further with increasing involvement of the bone marrow.⁵ It is evident that the change in the sedimentation rate is an early, rapidly appearing, constant and dependable sign and is not appreciably influenced by coexisting anemia.¹⁸

Pain may appear long before positive roentgenologic evidence of a metastatic lesion. This is particularly true in the spine. Involvement of the nerve root itself is not necessary to produce radicular pain. Any part of the vertebral body, its projections or the soft tissue coverings may give rise to root pain.¹⁹ A lesion not detectable in a roentgenogram may cause sufficient irritation to be reflected via the spinal nerve roots as pain months before the roentgen ray evidence of an osseous bone lesion becomes visible.

The presence of an elevated serum phosphatase level is very suggestive of a malignant process in bone. Woodard and Craver²⁰ found elevated serum phosphatase levels in many patients with symptoms referable to bone, although no changes were demonstrable by means of roentgen rays. In some of their patients, lesions were subsequently demonstrated. They concluded that a persistently elevated serum phosphatase level is indicative of invasion of bone.

We feel that whenever a malignant lesion is suspected it is important to perform serial determinations. Phosphatase levels which are within the normal range but ones which are steadily rising are significant. This was demonstrated in our case 4.

SUMMARY AND CONCLUSIONS

From our experience with 7 patients, 4 of whom we have described, we feel that an early and definite diagnosis of spinal metastases can be made in spite of negative roentgenologic evidence. Basing our contention on the reports of alterations of the erythrocyte sedimentation rate, the serum phosphatase levels attending metastatic osseous lesions and our own observations on the character of the radicular pain, we suggest the following triad for an early diagnosis of spinal metastases: (1) the presence of radicular pain, in narrow zones, sharply limited to one or two spinal nerve roots, associated with localized tenderness to deep percussion over the spinous processes of the vertebrae which form the foramina of exit for the nerve roots of the painful dermatomes; (2) an accelerated erythrocyte sedimentation rate, and (3) an increase in the serum phosphatase level.

Two rules governing the early diagnosis of malignant spinal metastases are formulated, as follows:

1. If a patient has an unsuspected primary malignant lesion, the presenting symptom is radicular pain: (a) The pain varies from the usual type of arthritic root pains, as described; (b) the erythrocyte sedimentation rate is greatly accelerated; (c) the serum phosphatase level is increased; (d) there is no obvious clinical explanation or demonstrable cause for these changes.

The possibility of the existence of a malignant lesion with spinal metastases must command serious and diligent attention.

2. If a patient has, or has had, a proved primary malignant lesion, the presenting symptom is radicular pain, as described previously. An elevated sedimentation rate and/or an elevated or rising serum phosphatase level are present. A diagnosis of malignant metastases to the spine may be made irrespective of negative roentgenologic findings.

EARLIER DIAGNOSIS OF SUBACUTE STREPTOCOCCUS VIRIDANS ENDOCARDITIS

HENRY A. CHRISTIAN, M.D.

BROOKLINE, MASS.

Of 150 consecutive adult patients with subacute Streptococcus viridans endocarditis coming to the medical service of the Peter Bent Brigham Hospital in the period March 31, 1913 to Aug. 31, 1939 the majority arrived at the hospital without a correct diagnosis, or the correct diagnosis had been made by a consultant only shortly prior to hospital admission. It was unusual for the correct diagnosis to have been made by the general practitioner in charge of the patient during an illness which already had lasted for several to many weeks. From a study of the records of 150 patients it would seem that relatively few general practitioners are aware of the usual early clinical picture of bacterial endocarditis caused by Str. viridans; their unawareness leads them to fail to suspect the presence of this disease at a time when the correct diagnosis should have been quite obvious, certainly obvious enough to suggest getting a blood culture as one of the important steps toward obtaining the correct diagnosis and to suggest a special search for the important clinical evidences of such a disease.

Early diagnosis has become all the more important now that there is available chemotherapy which makes cure a possibility, provided Str. viridans vegetations are not too large and are not organized at the time treatment begins, for under the latter circumstances many of the bacteria will be situated away from the blood stream and relatively inaccessible to chemicals circulating in it. If the vegetations are small and unorganized, the chance of cure by chemotherapy will be enhanced greatly. Consequently early diagnosis has become an important adjunct to successful treatment. To accomplish this, it will be necessary for the general practitioner to know the symptoms and signs of developing Str. viridans endocarditis and be on the watch for their appearance in his patients, particularly in those who have the background on which such development should be expected.

What is the clinical picture that should suggest to the practitioner Str. viridans endocarditis in its developing or early stage? It is a composite resultant from the effects of one major constant, two major variables and a varying number of minor variables, the last relatively unimportant in making up the clinical picture. The three major factors appear in almost every case, but the variables, as a rule, come in the later stages of development of subacute Str. viridans endocarditis, while some feature of the major constant, with few exceptions, inaugurates the illness.

The major constant in this type of endocarditis is toxemia of rather low grade as would be expected from the action of a bacterium of slight virulence, as is Str. viridans. It is a toxemia which tends always to make its appearance gradually and to progress slowly, in contrast to what usually happens in other infectious diseases. However, the majority of patients can fix definitely the time at which they noticed that they were no longer in normal health.

20. Woodard, H. Q., Craver, L. F.: Serum Phosphatase in the Lymphomatoid Diseases, J. Clin. Investigation 19: 1 (Jan.) 1940.

This study was aided by a grant from the Milton Fund of Harvard University for the purpose of examining the accumulated clinical records of the Medical Service of the Peter Bent Brigham Hospital.

Patients expressed themselves variously in regard to what they noticed first, using such terms as malaise, easy fatigue, loss of energy, loss of "pep," unexplained tiredness, loss of strength, "all in" feeling and loss of vigor. Such expressions were used by 70 (46.66 per cent) of the 150 patients to describe their first departure from normal. Many of these, too, said they had felt feverish, had had chilly sensations or actually had had fever as registered by a thermometer during the early days of the illness; 77 (52.66 per cent) of the 150 had noted some form of malaise or some evidence of fever or both at the onset, while 28 more (a total of 71.33 per cent) had had these symptoms in the early days of their illness. Many of these patients spoke of having had, in the beginning, a "cold" that "hung on."

Next in frequency at onset were complaints of joint or muscle pains, one or the other or both, by 41 of the 150 patients, while 23 more had joint or muscle pains early in the course of the disease—a total of 64 patients (42 per cent) with muscle or joint pain at or near the onset of illness; to many patients these joint and muscle pains or aches were part of a "cold" or "grippe," as they termed it. Nausea or loss of appetite was noted at onset or early by numerous patients (24, or 16 per cent), and for most of these loss of weight was spoken of; in an occasional patient rapid loss of weight was striking. This may be, in a rare instance, the only complaint during the earlier days. Headache was complained of by 11 patients as a symptom of onset.

The symptoms so far enumerated can be considered evidences of toxemia, and it is the rare patient who does not comment on some one or several of these as his first symptom or symptoms. It is the toxemia symptomatology which so often leads the physician in charge to make such mistaken diagnoses as typhoid, tuberculosis, influenza, undulant fever or malaria and, when there are joint pains, rheumatic fever. The persistence of these symptoms for more than one week with no positive evidence of other disease certainly should suggest to the physician the possibility of bacterial endocarditis, particularly in the patient with physical signs of chronic valvular heart disease.

Joint or muscle pains in the early stage of subacute *Str. viridans* endocarditis are confusing. There may be in some patients even warmth, redness or swelling about the joints, and often several joints at once or in succession are involved. These disturbances naturally suggest rheumatic fever, all the more so because many of the patients have had past attacks of rheumatic fever. It is uncertain whether to consider this phase of the disturbance as rheumatic fever precipitating or complicating what subsequently is obvious, namely that the patient has bacterial endocarditis, or whether to regard it as part of the aches and pains of a general toxemia caused by the bacterial vegetations. As I have watched patients with subacute *Str. viridans* endocarditis the latter explanation seems to me more appropriate for most of them, particularly since those forms of therapy which usually relieve the arthralgia and arthritis of rheumatic fever generally are not effective, and clinically what is seen is not just typical of rheumatic fever, the fever and malaise being out of proportion to the joint changes. Furthermore, during the course of toxemic manifestations joint and muscle pains may recur, sometimes several times, this suggesting, too, that the condition is part of the toxemia and is not rheumatic. In not a few patients careful study reveals that the disturbance is in the bones and not in the joints. Still, in some instances it may be that the patient has had

a recurrence of rheumatic fever. When in one of these patients the appearances of rheumatic fever come, it is well to apply antirheumatic therapy promptly and thoroughly but to remain skeptical of that being the whole story and continue to make every effort to prove or disprove the presence of bacterial endocarditis. What is going on should be apparent relatively soon.

In an occasional instance, what is termed a "cold" or "head cold," especially if followed by cough, may be an infection antedating the bacterial endocarditis, possibly even serving as the portal of entry of *Str. viridans*, rather than a symptom of the toxemia of the endocarditis. The condition with the diagnosis of influenza, often made by patient or physician at the onset, clearly is, in most cases, only an indication of toxemia; if it persists, toxemia certainly is the situation.

The two major variables in the clinical picture of subacute *Str. viridans* endocarditis are derived from embolic phenomena or from the effects of preexistent or coexistent chronic valvular heart disease or congenital anomaly of the heart. Embolic phenomena may appear at any time, but ordinarily not in the early days of the disease; lesions of the heart valves or congenital heart disease may cause no part in the clinical picture until the later stages, although few patients with these disorders die without evidence of cardiac decompensation; chronic passive congestion of the liver or other organs is found almost always on postmortem examination.

Among the embolic phenomena that may be noted by the patient early in, or even at the onset of the illness are paralyzes from cerebral embolism (these occurred nine times in the 150 cases at Peter Bent Brigham Hospital), abdominal pain from infarction of the spleen or, possibly, kidney (six times), painful finger or toe tips (eleven times) and petechiae (five times). Other embolic phenomena appear less frequently. In some patients such embolic phenomena seem to have been the evidence of onset, although, as a rule, toxemic symptoms antedate the embolic phenomena by a few days at least, and it is rare for them not to accompany the embolic phenomena, although these often are so striking as to divert the patient's attention from toxemic symptoms which he has had. In many instances the physician observes evidence of embolic phenomena not noted by the patient or discovers symptoms of them as the result of questioning the patient.

Dyspnea, especially dyspnea on exertion, is the sign of cardiac insufficiency noted most often by the patients I have studied. Dyspnea is much more frequent than is generally believed in patients with developing subacute *Str. viridans* endocarditis. Among the 150 patients at the Peter Bent Brigham Hospital 22 had a history of dyspnea antedating any evidence of the bacterial endocarditis, 10 gave dyspnea as a symptom of onset and 15 more reported its development in the early days of the disease; thus 47 patients (31.33 per cent) had dyspnea as one of their early symptoms.

Just how early in the development of this form of endocarditis positive blood cultures of *Str. viridans* can be obtained I have no way of knowing. In these 150 cases the etiologic diagnosis was made by finding *Str. viridans*; in 139 in blood cultures during life, in 11 at necropsy; in the latter, blood cultures made during life were negative on one or several occasions. However, in none of these cases were blood cultures made actually early in the course of the disease.

During the same period of time (1913-1939) 16 additional patients with history, physical signs and

course of disease after admission to the hospital in every way analogous to those just enumerated failed to yield positive blood cultures. The clinical diagnosis of subacute bacterial endocarditis seemed fully justified for these, but the causative organism could not be identified. Presumably some of these were cases of subacute Str. viridans endocarditis, but not necessarily so, since in the period covered at the Peter Bent Brigham Hospital there were 11 cases presenting a similar clinical picture in which blood cultures showed the gonococcus three times, Staphylococcus aureus once, staphylococcus not further identified twice, Staphylococcus albus four times and an unidentified pleomorphic bacillus once.

It is noteworthy that of 177 consecutive patients with the clinical diagnosis of subacute bacterial endocarditis the illness of 150 was demonstrated to be caused by Str. viridans, and in only 16 no bacterium could be demonstrated. Staphylococci came next to Str. viridans as causative agents, being found in 7 patients.

If the symptoms as described in previous paragraphs appear in patients who have had a history of rheumatic fever or who have or have shown in the past the physical signs of aortic insufficiency without a positive Wassermann reaction or aortic stenosis or mitral stenosis, or who have signs of congenital heart disease, the probability of subacute bacterial endocarditis is great, and it is likely that the causative organism is Str. viridans.

Whenever early symptoms, as just enumerated, appear, blood cultures should be made and, if not positive, repeated at intervals of a few days. Furthermore, embolic phenomena should be searched for carefully. If the blood culture is positive or embolic phenomena are found, the diagnosis of bacterial endocarditis is justified, and chemotherapy should be commenced. Even if neither of these is present, continuance of symptoms and fever without positive evidence of other disease causing prolonged fever justifies a tentative diagnosis of bacterial endocarditis and inauguration of chemotherapy. It seems wiser to treat early for a mistaken diagnosis than wait for positive evidence of the disease and miss the opportunity to apply chemotherapy in an early stage of vegetation formation, when success in treatment is likely.

SUMMARY

1. Since patients with subacute Str. viridans endocarditis so often come to the hospital without a diagnosis or with a wrong diagnosis, it is apparent that relatively few practitioners are aware of the usual early clinical picture of this disease.

2. The chief early symptoms in the 150 patients I have examined resulted from toxemia; they were complaints indicative of (a) malaise and fever in 52.6 per cent of cases at onset and 71.3 per cent at onset and in the early days of the disease; (b) joint or muscle pains in 42 per cent at or near onset, and (c) nausea or loss of appetite in 16 per cent at onset and in the early days of the disease.

3. If these symptoms appear in a patient known or found to have evidence of chronic valvular or congenital disease of the heart and persist for more than one week without the development of evidence of other definite disease, the probability of bacterial endocarditis is great.

4. If in these patients embolic phenomena appear or a blood culture is positive, a definite diagnosis of bacterial endocarditis should be made.

5. If the condition referred to in either of the foregoing two paragraphs occurs, appropriate chemotherapy should be begun at once.

FACTORS CONTRIBUTING TO THE DEVELOPMENT OF HYPERTENSION

IN PATIENTS SUFFERING FROM RENAL DISEASE

EDGAR A. HINES JR., M.D.

AND

HOWARD H. LANDER, M.D.

Fellow in Surgery, the Mayo Foundation
ROCHESTER, MINN.

Since Goldblatt and others have succeeded in producing hypertension in animals through the mechanism of renal ischemia there has been a revival of interest in the question of the renal factor in essential hypertension. Some writers on the subject have been inclined to disregard previous fundamental work concerning the background of hypertensive disease in human beings and to attribute all essential hypertension primarily to the operation of a renal mechanism. Others have attributed, in cases of essential hypertension, a primary etiologic role to a renal lesion which might have been coincidental. Hypertension occurs in approximately 15

per cent of all persons and in probably a third of all persons more than 50 years of age; consequently, it could be expected that by chance alone there could be found a relatively high incidence of hypertension in any group of persons suffering from renal disease. Furthermore, instances of long-standing renal disease can be encountered in patients who do not have hypertension or who have low blood pressure; also, instances of long-standing severe hypertension are encountered in which there is no evidence of renal disease. The only instances in which there is direct evidence that the renal factor may be primarily responsible for essential hypertension in man are in the group of cases reported by Butler¹ and by Barker and Walters² and others in which the blood pressure of the patients returned to normal or near normal values after the removal of a unilaterally diseased kidney. However, in some of these cases the removal of the diseased kidney did not result in relief of hypertension, and in others the blood pressure subsequently returned to previous high values. Such observations suggest that there are factors of importance other than the diseased kidney in hypertension associated with renal disease.

From the Division of Medicine, the Mayo Clinic (Dr. Hines).

2. Barker, N. W., and Walters, Waltman: Hypertension Associated with Unilateral Chronic Atrophic Pyelonephritis: Treatment by Nephrectomy, *Proc. Staff Meet., Mayo Clin.* 13: 118-121 (Feb. 23) 1938

One of us³ has reported on a follow-up study of 1,522 patients who usually had a normal blood pressure and who had returned to the Mayo Clinic ten or twenty years after their first visit. The conclusions derived therefrom were based on a comparison of the original blood pressure as recorded on the patient's first visit to the clinic and the presence or absence of hypertension when the patient was reexamined after ten or twenty years. It was found that the majority (70.4 per cent) of the patients who had an original elevation in systolic and diastolic blood pressures into the upper range of normal (140 to 160 systolic and 85 to 100 diastolic, expressed in millimeters of mercury) had hypertension subsequently (ten or twenty years later), whereas only a small number (3.4 per cent) who originally had blood pressures in the lower range of normal had hypertension subsequently. When the records were being considered for the selection of a group of cases for study it was noted that there were a number of patients with various urologic conditions who had returned to the clinic ten or more years after their first visit. These patients were not included in the group whose histories were originally studied. In view of the confusing situation concerning the importance of the renal factor in essential hypertension, already mentioned, it seemed worth while to make a study of the group of patients who had urologic disease, a study similar to that which had been carried out in the group of patients without urologic disease. The present report concerns the study of 264 patients suffering from various urologic conditions who had returned to the clinic ten or more years after their first visit. The average interval between the first and the last visit was fifteen and three-tenths years. The initial reading of the blood pressure of all these patients was less than 160 mm. of mercury systolic and 100 mm. diastolic. The majority had an initial blood pressure of less than 145 mm. systolic and 90 mm. diastolic. The term "subsequent hypertension" as used in this paper implies that one or several readings of the blood pressure were obtained at the time of the last visit of the patient, at which time the systolic blood pressure was more than 160 and the diastolic pressure was more than 100. In the majority of patients there was also accompanying evidence of hypertension in the changes observed in the ocular fundi.

SUMMARY OF DATA

The total number of patients with urologic disease was 264. The average age (for the series) at the time of the first visit was 38.8 years. The different types of urologic diseases encountered were as follows: chronic pyelonephritis 110 instances, renal stones 38, chronic glomerular nephritis 26, infection of the urinary tract (with normal shadows in the urograms) 26, renal tuberculosis 18, renal neoplasms 16, polycystic kidneys 9, atrophic pyelonephritis 9, hydronephrosis 7 and solitary cyst of the kidney 5 instances. The diagnoses in our series of cases were based on clinical data; consequently, the data on the basis of which the patients were grouped as to the types of urologic disease they had were influenced by personal interpretation. However, all the patients had undergone a thorough examination, and unless there was reasonable certainty and agreement as to the diagnosis they were not included in our series. In 35.5 per cent of the series operation had been performed and the clinical diagnosis had been confirmed. That the group of patients in whom hypertension sub-

sequently developed had a significant degree of hypertension is indicated by the fact that on their last examination approximately 65 per cent had a systolic blood pressure of more than 175 and a diastolic blood pressure of more than 110, expressed in millimeters of mercury.

In table 1 is presented an analysis in detail of the group of patients who had atrophic pyelonephritis. It

will be noted that those patients who originally had a low blood pressure did not suffer from hypertension subsequently, whereas in those who originally had an elevated blood pressure hypertension did develop. The known duration of the disease had no relationship to the subsequent development of hypertension. A similar type of study was made of the series of patients as a whole. In table 2 is shown the relationship between the subsequent development of hypertension and the blood pressure on the patient's first visit, according to the extent of the renal lesion in the whole series, and in table 3 is shown the same relationship, according to the known duration of the disease in the whole series. It is obvious from these tables that in our series of

cases the subsequent development of hypertension is more closely related to the height of the blood pressure on the original examination than to the extent of the renal lesion or the known duration of the urologic disease. This holds true for all the different groups with urologic disease which we encountered, with the exception of that comprising patients who had polycystic kidneys, in which group 2 of 3 patients who originally had a low blood pressure subsequently began to suffer from hypertension.

In addition to the study of the relationship between the type, extent and duration of the urologic disease

3. Hines, E. A., Jr.: The Range of Normal Blood Pressure and the Subsequent Development of Hypertension; Follow-Up Study of 1,522 Patients, J. A. M. A. 115: 271-274 (July 27) 1940.

and the subsequent development of hypertension, an attempt was made to analyze the hereditary factor. Although it was recognized that the series was not large enough for a conclusive study, the incidence of a positive family history of hypertensive cardiovascular disease on the patient's original visit was approximately five times as great among the group who had subsequent hypertension as it was among the group who did

not have subsequent hypertension. This incidence is similar to the observations concerning the same subject of other investigators working with larger series of patients suffering from essential hypertension.

A comparison was made, in regard to the blood pressure on the patient's original examination and the subsequent development of hypertension, between the series of patients who had urologic disease and the series of patients who did not have urologic disease previously studied. There was a striking coincidence of data in the two series (tables 4 and 5). Furthermore, when the age factor was considered there was found no significant difference in the incidence of subsequent hypertension between the series of patients who had urologic disease and the control series.

COMMENT AND SUMMARY

The results of our study show that in a series of 264 patients who had various types of urologic diseases those patients who had a high normal blood pressure on their original visit were four to five times as likely to have hypertension subsequently as were those who had a low normal blood pressure, regardless of the type or extent of the urologic or renal lesion and regardless of whether the onset of symptoms of the disease of the urinary tract occurred before or after the original blood pressure reading. In respect to the correlation between

the original blood pressure and the subsequent development of hypertension there was little difference between the series of patients suffering from urologic disease and a control series of persons who had no renal or urologic disease. Furthermore, as far as could be determined on the basis of a study of the family histories of our patients, heredity plays a similar role in the development of hypertension associated with renal disease and in many instances of essential hypertension. We do not interpret our data as constituting a denial that renal disease may have been a contributing factor to the development of hypertension in some of our patients. However, these data do seem to cast some doubt on the importance of renal disease in producing hypertension in the series as a whole and call attention to the importance of exercising caution in attributing a role of primary importance to a renal lesion simply because it is found in a patient who has hypertension. Our study demonstrates that factors concerning the control of blood pressure which are inherent in each person may be of similar importance in the development of hypertension when there is an associated renal disease as in the development of hypertension when no renal disease is present. The presence or absence of these inherent factors may explain why hypertension develops in some patients who have a certain type of renal disease, whereas in other patients who have a similar type and extent of renal disease hypertension does not develop.

Clinical Notes, Suggestions and New Instruments

CORONARY SCLEROSIS IN HEAD INJURIES

WALTER D. ABBOTT, M.D., AND OLIVER J. FAY, M.D.
DES MOINES, IOWA

This case is presented because it is pertinent to industrial medicine. Fishberg¹ states that transient monoplegias may be the result of disturbed circulation of the brain, but White² mentions that vertigo, faintness and syncope are rarely symptoms associated with heart disease. However, Barnes³ states that in these cases death may occur on exertion and that previous electrocardiograms may have failed to reveal evidence of coronary disease. In 1937 Willis⁴ reviewed 700 cases of coronary sclerosis and stated that in only 7 per cent was paroxysmal dyspnea manifested. The relation of heart disease is not commonly associated with injuries to the head, yet in reviewing a medicolegal case Russem⁵ remarks that "the courts were not as much concerned with the pathology present as with the possible relation of the accidental injury to the onset of heart failure regardless of the condition of the heart before the injury." Therefore we feel that this presentation may be of value to physicians who attempt to evaluate disabilities.

REPORT OF CASE

A. S., a white man aged 58, fell from a ladder Feb. 7, 1938, suffering loss of consciousness and a linear fracture in the left temporal area of the skull. He apparently made a recovery after three weeks of bed rest but complained of pain in the temples, shortness of breath, dyspnea and inability to sleep. On April 18 a neurologic examination gave negative results.

5. Russem, B. C.: Some Medical-Legal Aspects of Heart Disease, Nebraska M. J. 24:181-185 (May) 1939.

Examination of the cerebrospinal fluid, electrocardiographic studies and roentgenograms of the skull were negative. However, his symptoms persisted, although he attempted to work, and because of negative examinations he was not considered to be disabled. Jan. 22, 1940, he suddenly lost consciousness while climbing a stairway and was dead on arrival at the hospital ten minutes later. Autopsy revealed no evidence of cerebral injury, and a careful scrutiny of the skull failed to establish evidence of the old fracture. However, it is an accepted fact that fractures of the skull are healed and not discernible within several months after an injury. The examination of the heart revealed coronary sclerosis with occlusion.

SUMMARY

The case of head injury presented here was the result of a cerebral ischemia. In spite of negative neurologic, electrocardiographic and physical examinations, these symptoms were undoubtedly the result of cardiac and not of cerebral disorders.

TRAUMATIC RUPTURE OF THE SPLEEN: AN
UNUSUAL FOOTBALL INJURY

L. WALLACE FRANK, M.D., LOUISVILLE, KY.

Trauma to the abdomen and especially to the left renal region not infrequently produces rupture of the spleen. I have seen a number of cases and in some the severity of the injury was out of all proportion to the mildness of the trauma. In a review of the literature I could find only one case in which rupture of the spleen followed a football injury. This case was reported by George Armitage in the *British Journal of Surgery*.¹

REPORT OF CASE

R. B., a white youth aged 17, was admitted to the hospital the night of Oct. 10, 1939, because of abdominal discomfort. He gave a history of having had malaria five years previously.

The onset of his present condition dated to the night of October 6, when he was struck in the left upper quadrant of the abdomen while playing football. He was completely knocked out, his color was pale and his pulse was thready; he was carried from the field. On the following day he made the trip home with the team, a distance of 250 miles. He had no complaints but lacked his usual energy. During the next day, Sunday, he remained quietly at home, and the family noticed that he had lost his appetite. On Monday he returned to school as usual and that afternoon reported for football practice. He went through the routine signal drill, being apparently perfectly well. The following afternoon while in scrimmage he was again struck in the abdomen and suffered agonizing pain on the left side and pain in the left shoulder. He was sent to the hospital, where he was given a hypodermic injection of morphine and an ice bag was applied to the abdomen. Because of the pain in the left shoulder an injury to the shoulder or chest was suspected and a roentgen ray examination was made. This failed to reveal any evidence of injury to the bones or to the chest. There was no evidence of air beneath the diaphragm, and the diaphragms were normal in position. I was called in consultation the following morning on account of his continued abdominal discomfort.

On physical examination the patient was apparently healthy with good muscular development; he was lying quietly in bed. He complained of some, though not extreme, abdominal discomfort. He also complained of pain in the left shoulder. Examination of the shoulder girdle gave negative results. The abdomen was slightly rigid and there was slight general abdominal tenderness. There was definite point tenderness in the left costovertebral angle. There was some tenderness along the left costal margin. There was no evidence on physical examination of any fluid in the abdomen. The spleen could not be palpated nor could the liver be felt. A tentative diagnosis of intra-abdominal hemorrhage probably due to a ruptured spleen was made.

1. Armitage, George: Traumatic Rupture of the Spleen Involving the Pedicle—Complete Recovery: A Rare Rugby Football Injury, *Brit. J. Surg.* 17: 335 (Oct.) 1929.

The pulse rate on admission was 80 a minute and when I first saw him it was 94. The temperature was normal. The blood count made at the time of my examination showed a hemoglobin content of 83 per cent, 4,040,000 red cells and 16,900 white cells, of which 89 per cent were neutrophils. The Schilling count of the leukocytes was 3 per cent juveniles, 8 per cent stab cells and 78 per cent segmented cells. The urine, except for a faint trace of albumin and acetone, was normal. During the afternoon his pulse rate varied from 82 to 86 a minute and the rectal temperature had risen to 100 F. A blood count made the same afternoon revealed 80 per cent hemoglobin, 4,300,000 red cells and 13,350 white cells, of which 84 per cent were neutrophils. The Schilling count was practically unchanged. The patient was given 1,000 cc. of 5 per cent dextrose solution intravenously by the drip method and the abdomen prepared for operation should it become necessary.

The following morning (the second hospital day) his pulse varied from 80 to 90 a minute and the rectal temperature remained 100 F. His blood count, however, had fallen. The hemoglobin content was now 70 per cent, red blood cells 3,880,000 and white cells 12,800. At noon he showed definite evidences of intraperitoneal hemorrhage. The hemoglobin content was now 66 per cent, red cells numbered 3,670,000 and immediate operation was advised. This was done through a high left rectus incision. The abdomen was full of blood. When the spleen was delivered it was apparent that it had been torn completely through and the tear extended into the splenic pedicle. The pedicle was hastily clamped and ligated and the

Complete tear through the spleen and the organized clot fixed to the torn surface of the larger fragment. Other tears in the splenic capsule are evident.

spleen removed. The clotted blood was removed from the abdomen and the incision closed.

Immediately after the operation the patient was given 1,000 cc. of blood by the citrate method. He reacted well and made a nice recovery, leaving the hospital fourteen days after the operation. His blood count at the time of dismissal showed a hemoglobin content of 77 per cent, 4,530,000 red cells and 9,900 leukocytes with a normal differential count. At present he is perfectly well.

COMMENT

The question naturally arises as to what part if any the previous malarial infection played in predisposing to splenic rupture. The size of the spleen was normal for a boy of his physical development. Pathologic examination of the spleen revealed nothing except the tears.

This case is interesting for two reasons: first, that the injury was sustained while the boy was playing football and, second, because of the length of time which elapsed from the moment of injury until definite signs of internal hemorrhage appeared. The latter can be explained, I think, on the following basis: At the time he was first hurt the spleen was torn, but the blood coagulated and sealed off the bleeding surfaces. (Examination of the removed spleen showed an old organized blood clot covering the splenic pulp.) This clot was so adherent to the torn surface of the spleen that it could not be easily dissected away. Following his second traumatism I think that the tear in the spleen was reopened and at this time the pedicle was torn.

Council on Pharmacy and Chemistry**REPORTS OF THE COUNCIL**

THE COUNCIL HAS AUTHORIZED PUBLICATION OF THE FOLLOWING
STATEMENT AND REPORT. OFFICE OF THE COUNCIL.

**MENADIONE, NONPROPRIETARY TERM
FOR THE SUBSTANCE 2-METHYL-1,
4-NAPHTHOQUINONE**

Following the work of a number of distinguished investigators on the identity and synthesis of a vitamin K preparation, there was offered to the medical profession by many firms the synthetic 2-methyl-1, 4-naphthoquinone, which possesses vitamin K-like actions. Three firms have asked the Council to coin a nonproprietary name for the substance.

In canvassing possible acceptable terms, it was found that a number of them either conflicted with the rules of scientific nomenclature or were trademarked names. The Committee on Nomenclature submitted informally to Dr. E. J. Crane, chairman of the Committee on Nomenclature of the American Chemical Society, the possibility of the term "methnaphone." Dr. Crane replied that his committee was of the opinion that it would be better to avoid the ending "-phone" or "-quinone," as the latter was preempted by many trade names. As a counter suggestion, Dr. Crane and his associates offered the term "menadione."

On recommendation of the Committee on Nomenclature, the Council has adopted the term "menadione" (pronounced mē-nā-dī-one) and has authorized its use as a nonproprietary name to describe the substance 2-methyl-1, 4-naphthoquinone.

**PREGNENINOLONE AND PRANONE
(Schering Corporation)**

Pregneninolone, a derivative of testosterone, possesses the ability to induce progestational changes in the uterus of animals and human beings when administered by mouth. Progesterone itself has but little activity by the oral route; by injection it is three to six times as potent as pregnenolone by mouth. Owing to the ease of administration, it appears that pregnenolone, in the appropriate doses, would have a significant advantage over progesterone for therapeutic purposes when sufficient clinical evidence will indicate that progesterone therapy is reliable and worth while. The properties of pregnenolone are, however, not identical with those of progesterone. For example, unlike progesterone, it is slightly estrogenic.¹ One is therefore not entitled to assume, without adequate proof, that the therapeutic results obtained with progesterone can be expected from pregnenolone because one of its several activities simulates progesterone. The clinical reports on treatment with this substance are few. Hamblen and his co-workers² have claimed some success in treating menometrorrhagia with estrogens followed by pregnenolone. Frank³ has recently reported the use of pregnenolone in the treatment of various ovarian dysfunctions. He has obtained results in the treatment of dysmenorrhea which are moderately satisfactory, but this investigator admits that therapy in dysmenorrhea is difficult to evaluate, since patients respond to a certain extent to most forms of endocrine therapy. The number of cases of habitual abortion treated by Frank are too few to afford a basis on which to draw conclusions.

The Council has received copies of unpublished reports on the use of pregnenolone in habitual abortion in which gratifying results were reported. The information on these patients

is, indeed, interesting; but the evidence presented seems to be of the same type reported for progesterone several years ago, which, in the opinion of the Council, is still inconclusive in demonstrating that progesterone is of proved effectiveness in treating threatened and habitual abortion. There was no evidence of objective nature such as has been reported by Browne and his co-workers and Buxton on the pregnandiol determinations in spontaneous abortion. While these results are indications of promise in this therapy, considerable further evidence is required before pregnenolone can be assumed to be of value in the treatment of spontaneous abortion. There is a definite lack of investigation on the action of pregnenolone on the human uterus or its fate in the body and the proper dosages in therapy.

The Council is of the opinion, therefore, that therapy with pregnenolone is still in its preliminary phases and that its effectiveness has not been established as yet in such a manner that physicians can depend on the preparation to produce satisfactory results in the appropriate conditions. It must be pointed out that this substance was placed on the market over a year ago and that physicians were induced to use this substance on the advertising claims of the firm, as there was a distinct lack of evidence in the scientific literature. In view of this fact, the Council believes that it is obliged to inform the physician of the need for further investigations with this preparation. It should be used, for the present, only by specialists in this field. Schering Corporation markets a preparation of pregnenolone, termed Pranone, and recommends its use for all conditions which are claimed to respond to progesterone administration. These advertising claims of Schering Corporation for Pranone are considered unwarranted at the present time.

As the available evidence on the clinical use of pregnenolone, an "oral progesterone," is inconclusive, pregnenolone, which is marketed in this country as Pranone (Schering Corporation), is not acceptable for inclusion in New and Nonofficial Remedies.

NEW AND NONOFFICIAL REMEDIES

THE FOLLOWING ADDITIONAL ARTICLES HAVE BEEN ACCEPTED AS conforming TO THE RULES OF THE COUNCIL ON PHARMACY AND CHEMISTRY OF THE AMERICAN MEDICAL ASSOCIATION FOR ADMISSION TO NEW AND NONOFFICIAL REMEDIES. A COPY OF THE RULES ON WHICH THE COUNCIL BASES ITS ACTION WILL BE SENT ON APPLICATION.

OFFICE OF THE COUNCIL.

LIVER EXTRACT U. S. P. SUBCUTANEOUS (STEARNS).—A purified aqueous concentrate of the antipernicious anemia factor from fresh, edible mammalian (equine) livers to which has been added 0.4 per cent phenol as a preservative. The daily subcutaneous or intramuscular administration of 2.5 cc. (one ampule) has been found to produce the standard reticulocyte response defined as 1 U. S. P. unit (injectable) when assayed in cases of pernicious anemia as required by the Council.

Actions and Uses.—Liver extract U. S. P. subcutaneous (Stearns) is used in the treatment of pernicious anemia during relapse and for the maintenance of normal health in patients with pernicious anemia. See general article Liver and Stomach Preparations, New and Nonofficial Remedies, 1940, p. 320.

Dosage.—For the average adult patient in relapse, one or more injectable units daily. The maintenance dose should not be less than 2.5 cc. (1 U. S. P. injectable unit) daily.

Manufactured by Frederick Stearns & Co., Detroit. No U. S. patent or trademark.

Ampoules Liver Extract, U. S. P. (Subcutaneous)-Stearns, 2.5 cc.
Vials Liver Extract, U. S. P. (Subcutaneous)-Stearns, 10 cc.

Liver Extract U. S. P. is prepared from healthy livers selected from healthy animals, inspected, and as free from fat as possible, and extracted and several times with water, and partial coagulation of the proteins is accomplished by heating to 85-90° C. The filtrate is concentrated in vacuo at a low temperature. Elimination of much of the protein material is obtained by the addition of alcohol and filtration at low temperature and pressure. After filtration, precipitation of the potent fraction is obtained by the addition of large volumes of alcohol. This potent material is taken up in water, the alcohol removed in vacuo and the pH adjusted to 6.5. The volume of each lot of extract is determined by clinical results obtained in the use of that lot in suitable patients with pernicious anemia. After the addition of 0.4 per cent phenol, the extract is filtered in a Berkefeld filter and filled into ampoules and vials and sterilized.

1. In the human being it is claimed that its action is exclusively progestational.

		Hospitals	1057		

The total number of beds now available in registered hospitals is 1,226,245, an increase of 31,219 beds, which is the equivalent of an 85 bed hospital for each day of last year, Sundays and holidays included, not forgetting it was leap year.

The amount of hospital facilities per unit of population continues its steady increase; the demand per unit of population likewise is growing.

The capacity of registered hospitals has practically doubled since 1918 and trebled since 1909.

The hospitals that are approved for internships, residencies and fellowships have greater capacity than all of the hospitals that were in existence in 1909.

In response to the annual census form which was mailed to all the hospitals that appear in the Register, reports were received from all but fifty-six institutions, a record of 99.1 per cent. The response on the basis of bed capacity was 99.8 per cent.

The average number of beds idle throughout the year was 200,074, as compared with 198,543 for the year 1939.

General hospitals were occupied to 70.3 per cent of capacity as compared with 69.2 per cent the preceding year. The average number of idle beds in general hospitals in 1940 was 137,200. In 1939 it was 136,956. The types or groups of hospitals in which there was

				Number
3. Refused registration after investigation (capacity 16,444).....				545
4. Unclassified emergency stations, clinics, offices, cottages, and so on, with facilities for bed care (capacity unknown).....				2,441
5. Prospective hospitals and sanatoriums:				
a. Opened. Registration pending.....				86
b. Under construction.....				52
c. Planned. Construction pending.....				109

The total number of registered hospitals is 6,291, an increase of 65 during the year.

The average census of patients was 1,026,171.

One person for every three and one-tenth seconds is the rate at which patients entered hospitals during the year 1940.

The total number of patients admitted by all registered hospitals in the United States was 10,087,548. This does not include the 1,214,492 babies that were born in hospitals during the year.

The general hospitals alone reported 1,163,694 births and the maternity hospitals 48,126.

The increase of admissions over the previous year is 208,304. The nonprofit hospitals, including churches, fraternities and other nonprofit associations, contributed 68,600 to this increase.

growth, and those which showed decline, are revealed in the summaries and tables included in this article.

The total patient days of hospital service for the year 1940 was 375,578,586, an increase over 1939 of 11,862,291. The number of patient days is obtained by multiplying the average daily census by 366.

During the year 1940 the Council on Medical Education and Hospitals at its three business meetings admitted to the Register 229 hospitals having an aggregate capacity of 9,629 beds and 1,120 bassinets. Included in the 229 were 174 general hospitals, 14 tuberculosis, 11 nervous and mental, 6 convalescent, 4 maternity, 3 cancer, 3 orthopedic, 3 for drug addiction, 3 children's, 3 hospital departments of institutions, 2 eye, ear, nose and throat, 2 for cardiac children, 1 proctology.

Of the net gain of 65 hospitals during the year, 27 are to be credited to governmental hospitals and 38 to nongovernmental. As to bed capacity, the former increased 28,543 and the latter 2,676. As to number of patients admitted, governmental hospitals increased from 2,734,375 to 2,869,004. Total nongovernmental increased in patients admitted from 7,144,869 to 7,218,544. In average census the net increase of governmental hospitals was 20,624, and the net increase in nongovernmental hospitals was 9,064.

In general, the number of hospitals, beds, bassinets, patients admitted and average census all increased in the groups of federal, state, county and city hospitals. There was a decline in these respects, however, in the city-county hospitals—that is, institutions operated jointly by the city and county.

Nonprofit hospitals increased in number from 2,840 to 2,901 and in bed capacity from 293,505 to 298,490. The nonprofit hospitals admitted 6,254,850 patients as against 6,186,250 for the previous year. The average census increased from 201,326 to 210,764.

Church related institutions lost three in number of hospitals but registered gains in beds and average census.

Proprietary institutions declined in number from 1,646 to 1,623 and showed a decline also in number of beds but a slight increase in the number of patients admitted. Corporations not restricted as to profit (proprietary) declined in number and in bed capacity but showed a slight increase in number of patients admitted. The number of individual and partnership hospitals dropped from 1,190 to 1,174.

ANNUAL CENSUS OF HOSPITALS

This is the twentieth annual census of hospitals by the Council on Medical Education and Hospitals. The first census that rendered information complete enough for practical use was in 1909, and that was followed by an occasional canvass of all hospitals, becoming annual in 1920.

In each annual census are certain standard questions such as number of beds, bassinets, births, patients admitted, average census of patients, also lists of staff doctors and interns. In addition to these perennial data, each questionnaire includes certain questions that are of importance at the particular time. Each succeeding questionnaire, therefore, is different from the preceding, and the tendency is for them to expand somewhat in length and complexity. The policy of the Council always has been to ask only for data that are important and to make use of all the information that is obtained. Thanks to the cooperation of hospitals, the response always approximates nearly 100 per cent. This year the response to the questionnaire was 99.1 per cent of number of institutions and 99.8 per cent of capacity.

The returns in this census were prepared for punch card tabulation.

The 1,039 hospitals that are approved by the Council for internships and for residencies in specialties received a questionnaire that is more comprehensive than the one used for all the other registered hospitals.

It is not necessarily true in all cases that the approved hospitals have essentially better equipment or give better care to patients, but because a hospital assumes the function of training interns and residents and is approved for that purpose it becomes necessary for the Council to check on the teaching facilities and functions in those hospitals in addition to the general information solicited from all other registered hospitals.

In the list of registered hospitals following this article the hospitals that the Council approves for intern training are marked with a five-point star (*) and those approved for residencies with a plus sign (+). Some detailed information regarding the hospitals approved by the Council are given on a later page under the heading of Internships, Residencies and Fellowships.

AMERICAN COLLEGE OF SURGEONS AND A. M. A. UNITE ON CENSUS BLANK

This year, for the first time, the questionnaires used by the Council represent a combination of the annual census blank of the American Medical

1939	2,155	549,693	36,805	7,066,593

of filling out questionnaires in the office of hospitals. It also facilitates the gathering of essential data required by the two cooperating organizations for their use and for the nation. Most of all, it reduces the confusion which exists when several organizations are working in the same field. The officials of the A. M. A. and the College, and their office staffs, worked together to design a questionnaire that would elicit more information with fewer questions and achieve greater uniformity and simplification in the use of terms. All the

hospitals that are fully approved as meeting the minimum standards of the American College of Surgeons are designated with a delta (Δ) in the list of registered hospitals published in a later section of this article.

* Population—U. S. Bureau of Census—1940.

It should be understood that each organization has its own distinctive separate administration, requirements, inspections and approved lists. Approval of a given institution by one organization does not in any way affect the initiative and the responsibility of the other organization with regard to the approval of that institution. There is cooperation as to the joint questionnaire, correlation of inspection itineraries and mutual courtesy in the use of symbols to designate each other's approvals.

FACILITIES NOT IN THE REGISTER

The hospital facilities that are not printed in the list of registered hospitals might be summed up under two heads: first, those that have definite faults and practices such as are generally recognized as unethical or dangerous and that therefore need complete change of policy, and their number at the present time is 545. Their capacity, according to the latest available information, is 16,444, or less than two thirds of 1 per cent of the facilities furnished by the hospitals recognized in the Register.

A second class of facilities not appearing in the Register includes emergency stations, clinics, offices, and so on, with some facilities for bed care attached or available. The bed facilities in these institutions,

usually spoken of as unclassified, is too variable to be known. They are recognized as ethical and valuable auxiliary facilities to the hospital system. Most of these unclassified facilities have three to ten beds each which are used as occasion demands. Some of them are sickrooms attached to small custodial institutions.

REGISTRATION AND APPROVAL

Registration of hospitals does not mean the same as approval. *Registration* means the inclusion of the hospital in the list published in the Hospital Number of THE JOURNAL and in the American Medical Directory. The Essentials of a Registered Hospital are employed in such a way as to raise the standards of hospitals and to point the way to better service.

Approval, on the other hand, means specific endorsement of hospitals for educational purposes, the fitness for which is determined by observation, inspection and comparison with the definite requirements for the approval of hospitals for intern training and residencies.

The term *approved*, as used by the College of Surgeons, may be applied to those registered hospitals that meet the minimum standards of the College.

GROWTH OF HOSPITAL FACILITIES

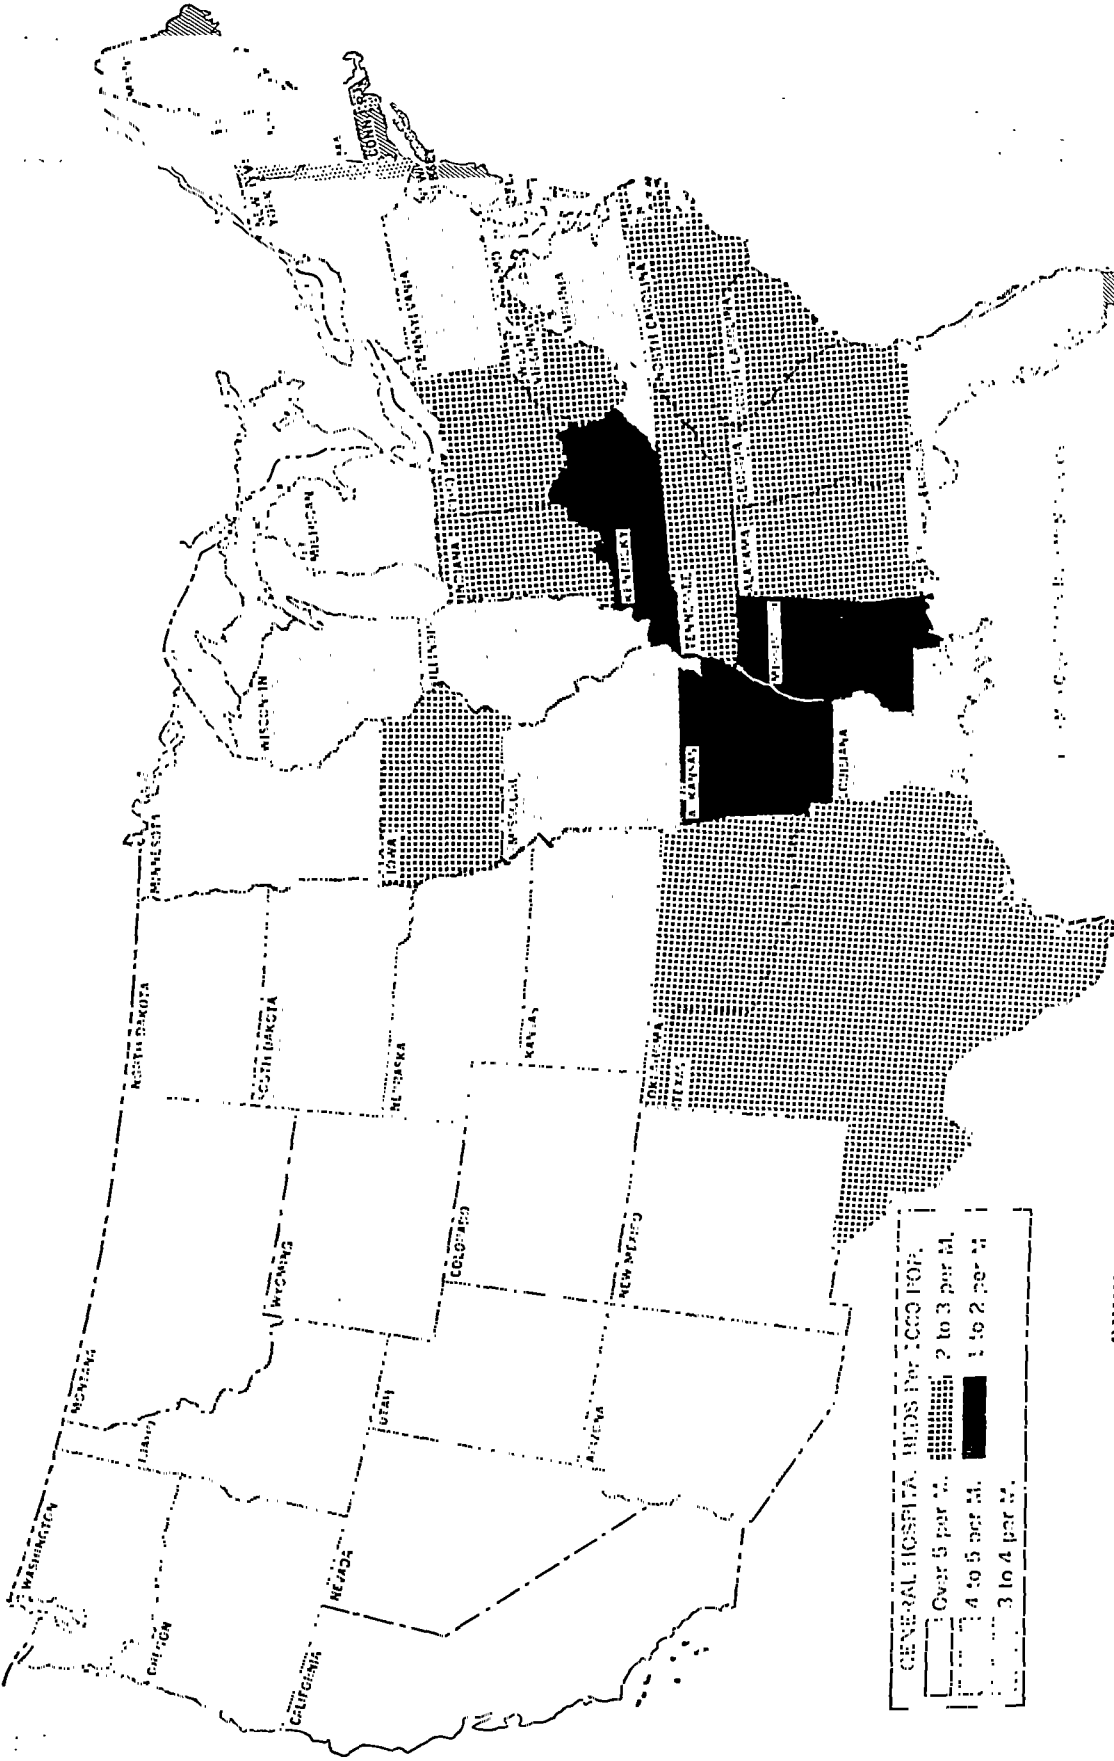

The net increase in all hospital beds of 31,219 was shared by forty-three states and the District of Columbia, all of which showed a net increase. A slight

decrease in the number of beds for the year was apparent in Idaho, Massachusetts, Nevada, North Dakota and Utah. In all these states, however, there was an increase in the number of patients admitted.

Conspicuous among the forty-three states showing an increase was California, which has 5,778 more beds than a year ago, a gain of 7.9 per cent. This increase is generally distributed to many hospitals of different

Totals.....	6,291	5,538	739	14

The rate of gain in number of hospital beds for the thirty-one years from 1909 to 1940 was 25,974 a year. This is equivalent to a net gain of 71 beds for each day of the thirty-one years. The rate of gain has been remarkably steady over the entire period from 1909 to 1940, during which time the figures are available. For the first five years of that period, 1909 to 1914, the gain in hospital beds was at the rate of 22,283 beds a year, or 61 beds a day.

The classification heretofore carried as fraternal hospitals is being discontinued and does not appear in its accustomed column in table 1 B. Reasons for omitting this classification are: (1) The number of institutions and their volume of work have steadily declined to a figure scarcely more than 1 per cent of the total for the nonprofit group; (2) most of the institutions that were designated as fraternal hospitals no longer limit their services to fraternity members, as a rule. Most of them are not supported exclusively by a fraternity. They are, therefore, more correctly classified in the column of nonprofit associations.

Footings of the column headed Nonprofit Associations showing figures for years previous to 1940 are in this issue also augmented by figures formerly shown in the fraternal column for corresponding years.

PATHOLOGY DEPARTMENTS

Although pathologic service is expected as a part of hospital service, its presence as needed cannot be taken for granted.

Hospitals that report having pathology departments number 5,538, compared with 4,873 a year ago. There were 4,384 in 1936. The quality of departments may vary from the highest downward, but the aim of the census is to include in these figures only those owned by hospitals.

Here, as in radiology services, the physician in some regions must furnish his own pathologic service or get it through other than hospital laboratories for his hospitalized patients. Seven hundred and thirty-nine institutions said they have no laboratory facilities of their own, and fourteen gave no answer to the question.

The number of necropsies reported for all registered hospitals in 1940 was 119,902.

RADIOLOGY DEPARTMENTS AND RADIOTHERAPY EQUIPMENT

There are 5,303 affirmative replies to the question whether the hospital has its own x-ray department;

968 answered no, and for 20 hospitals the facts are not known. There were 4,890 in 1939 and 4,589 in 1934.

Since the census covers all hospitals of every type and size there is a variety of radiology departments ranging from those fully equipped and adequately staffed to those institutions which do not afford the

best equipment and to which the services of properly qualified radiologists are not yet available for various reasons.

There are of course some hospitals and related institutions rendering acceptably a type of service which requires only occasional radiologic work. Comparison with former years can be observed in the

occupancy in the nongovernmental hospitals rose from 66.4 per cent in 1939 to 68.5 per cent in 1940. The present rate in this group is in strict contrast with its occupancy rate of 64.6 per cent in 1929 and 55.3 per cent in 1933. More details concerning the occupancy rate and its variations from year to year are given in the table referred to; also in the map showing occupancy

accompanying table. A total of 1,963 hospitals say they are equipped for roentgen therapy compared with 2,039 in 1937.

OCCUPANCY OF HOSPITAL BEDS

The table on percentage of beds occupied shows in general a larger percentage of beds occupied in 1940 than in the preceding year. The total of governmental facilities, federal, state, county and city, shows a slight decrease from 90.4 per cent last year to 89.8 per cent occupancy this year. On the other hand, the rate of

in general hospitals and in other data contained in these pages.

The groups of hospitals that show a considerable increase in occupancy rate over one year ago are general hospitals with a present rate of 70.3 per cent, industrial hospitals 53.9, orthopedic hospitals 76.5, and isolation hospitals 42.4 per cent.

A somewhat greater than the usual number of general hospitals reported overcrowding. Such reports come mainly from general hospitals that are supported by taxation, and it is rather usual in good sized cities for

public general hospitals to report overcrowding while private general hospitals in the same locality are wishing for more patronage.

To any one who examines the returns from a census of hospitals such as this and who receives inquiries from communities interested in readjusting the quantity of hospital facilities, it becomes apparent

facilities in a community has been met by some church centered organization or by some other type of non-profit association. Hospitals have been provided, as required, by the federal government for Army, Navy, Public Health Service, Veterans Administration, Indian Service and possibly other departments. Also, where occasion required, by state governments, cities, counties

FACILITIES FOR NEGRO PATIENTS

To the question "Are Negro patients admitted?" the governmental hospitals responded as follows: yes, 1,391; no, 273; no answer, 102.

Of the nongovernmental hospitals, 2,839 replied yes; 1,304 no, and 382 gave no answer.

This makes a total of 4,230 reporting that they accept Negro patients, 1,577 that they do not and 484 that did not supply the answer.

A considerable number of hospitals say they make no distinction and, therefore, keep no separate records for Negro patients, so that a separate census of Negro patients for all hospitals seems impossible.

The question "How many Negro patients were admitted?" was asked, but the response on that question has not as yet been tabulated. The figures given here include the 111 hospitals which are reported exclusively for Negroes. Included among those that answered yes were 3,144 general hospitals, 324 nervous and mental, 301 tuberculosis and 55 orthopedic, as well as some in each classification of other special hospitals. Some hospitals reported that there were no Negroes among their population, and others said that they supplied outpatient service.

The further tabulations which are possible from the questionnaires and the punched cards will afford additional data which may be published at a later date.

The attention of those interested in Negro hospital facilities is especially directed to a special survey

financed by the American Medical Association and directed by the Council on Medical Education and Hospitals. The report of that survey was published in *THE JOURNAL of the American Medical Association* April 20, 1929, Volume 92, pages 1375 and 1376.

Each locality has its own peculiar conditions which are to be understood and met in providing hospital facilities for its population. Careful study and consideration in the interests of the whole population in each community should be the basis of action. Due account should be taken of existing facilities.

BIRTHS IN HOSPITALS

The number of births reported in all registered hospitals for the year 1940 is 1,214,492, or a gain of 114,779 over the previous year. This is the largest gain registered in any period since 1929, when the census first asked for the number of births in hospitals.

How the births in hospitals compared with births outside of hospitals for the year 1940 is not known, since the United States Census figures on all births have not been received. However, the figure given by the United States Census Bureau for all births inside and outside of hospitals for the year 1939 was 2,265,588. It seems apparent, therefore, that appreciably over one half of the births are taking place in hospitals. Ninety-five and eight-tenths per cent of all the hospital births for 1940 were in general hospitals; 4 per cent were in maternity hospitals. In 1929 there were 621,896 births in hospitals, and the average increase in hospital births during the eleven years since that time has been at the rate of 53,872 a year.

OUTPATIENT DEPARTMENTS

The annual census of hospitals for a number of years requested the hospitals to state whether or not they had an outpatient department and, if so, to give the number of patients admitted and the number of visits made by those patients. There was no definition of outpatient department. These questions were continued up to and including the annual census for 1936. The returns indicated that there were about as many persons making use of outpatient departments as were accommodated in inpatient facilities. The total number of outpatient visits reported for the year 1936 was 35,588,640.

The recognized importance of the outpatient department fully justifies a definition of outpatient service and a classification of the different kinds of outpatient service. Such a definition and classification have been undertaken and were commented on in the *Hospital Number of THE JOURNAL* for March 30, 1940. In that issue, as well as at the present time, we have found it apparently most convenient to include under "outpatient" all ambulatory services connected with hospitals. This would include not only the general

outpatient department, organized and departmentalized and affording service for all types of ailments as they come, but it would include also ambulatory facilities in specialized hospitals, such as for tuberculosis, for mental diseases, for venereal diseases and all other types of ambulatory facilities maintained in connection with hospitals. It would seem logical also that the term "outpatient department" might be applied to the facilities maintained by many physicians in their private hospitals who see part or all of their ambulatory patients at their hospital offices.

Obviously the questions necessary for adequate investigation and classification of all outpatient services would be too elaborate for a simple questionnaire such as is used in the annual census of all hospitals. However, a beginning was made on the classification of outpatient services by including the questions whether the "Hospital maintains an outpatient department exclusive of emergency service and private practice of physicians with office in hospital. . . . Number of outpatients admitted (first admissions, exclusive of emergencies and private patients). . . . Total visits (first visits plus revisits). . . . Number of emergency (first aid) cases treated during the year."

These questions were rather completely answered and have been tabulated only for the group commonly known as general outpatient departments. The number of such outpatient departments reporting is 761, to which 4,420,406 outpatients were admitted. These made a total of 27,221,530 visits.

This total does not include the outpatient visits in clinics conducted by specialized hospitals nor does it embrace the general hospitals that limit their outpatient service to only one or two specialized clinics.

It includes only the data from general outpatient departments.

Considerable additional data regarding all types of hospital outpatient services were obtained but were not sufficiently complete to be included without further follow up and analysis.

INTERNSHIPS, RESIDENCIES AND FELLOWSHIPS

INTERNSHIPS

On March 1, 1941 the number of hospitals approved by the Council on Medical Education and Hospitals for training interns stood at 730. Of this number five institutions are located in Puerto Rico, the Philippine Islands, Hawaii and the Canal Zone. There has been a net decrease of six hospitals since March 1940.

According to reports recently received, the approved hospitals in the states provide a total of 8,182 intern positions. However, this figure does not indicate the number of appointments available each year and therefore cannot properly be compared with the annual number of students completing the four year course in approved medical schools. It must be kept in mind that there are a considerable number of hospitals in which the internship is longer than twelve months in duration. In these cases some of the intern positions are held by graduates in the second year of training. A hospital which has ten interns on a twenty-four month rotation plan, for example, will ordinarily appoint only five new interns each year.

In table A is shown the number of hospitals approved for intern training and the number of graduates of approved medical schools in the United States from 1920 to 1940 inclusive. It will be noted

HOSPITALS IN ALASKA, CANAL ZONE, GUAM, HAWAII, PHILIPPINES, PUERTO RICO AND VIRGIN ISLANDS

Hospitals in these lands have increased steadily in numbers and capacity. They now number 277, with 29,829 beds and 1,520 bassinets. The increases for last year, and other years since 1934, are shown in the accompanying table. Individual hospitals are named and the usual data concerning each are given in the special list at the end of the list of registered hospitals

Hospitals in Alaska, Canal Zone, Guam, Hawaii, Philippines, Puerto Rico and Virgin Islands

(1935).....	233	19,416	1,150
(1934).....	221	18,430	1,020

for the states. A majority of these hospitals are general. The distribution as to ownership or control is not so different from that in the states, a good share of the hospitalization being carried by the government and by nonprofit organizations, including a considerable number of church related institutions.

Progress that is evident in both quantity and quality speaks for enterprise and professional ideals.

The long distance that must be traveled by annual census questionnaires that are sent beyond the borders of the United States makes it impossible to receive complete returns in time for the publication of the Hospital Number.

that the hospitals have steadily increased, while the size of graduating classes has been fairly constant since 1935. The proportion of graduates serving internships,

however, has slightly increased in recent years. According to reports received from medical schools, 95.5 per cent of the class of 1935 secured internship appoint-

ments. From 1938 on the proportion has been practically 99 per cent.

Comparable data on the number of internship appointments offered each year are not immediately available. However, the figures for total internships (including those more than a year in duration) are

shown by table B.¹ The steady increase is obvious. Some of the increase has been produced by qualification of additional hospitals. Enlargement of the intern staff, resulting in many cases from an expansion of bed capacity or rising admission rate and average daily census, however, has also been a significant factor.

It is interesting to note that as late as 1925 the total number of internships did not equal the number of graduates of approved schools. As already mentioned, the data in the table do not indicate the annual appointments. However, it is equally true that not all graduates sought intern training until comparatively recent years. On the other hand there is reason to believe that it was not until 1934 or 1935 that all senior students applying for internships were able to secure places in approved hospitals.

In supplying data on the annual report form, a considerable number of hospitals apparently included residency positions in answering the question "Number of appointments each year." As nearly as this error can be corrected, pending correspondence with these hospitals, it is estimated that approximately 6,700 internship appointments are offered annually. Contrasted with the annual number of graduates of approved schools in the United States, there would appear to be a surplus of approximately 1,600 appointments. However, a large number of these surplus appointments are filled by graduates of approved schools repeating the intern year in a second hospital and by graduates of Canadian and of foreign schools.

UNFILLED INTERNSHIP APPOINTMENTS

On the annual report forms sent to approved intern hospitals a space was provided for "Number of vacancies at present." Practically all the hospitals returned the form and supplied this information. Two hundred and seventy hospitals reported a total of 615 vacancies. The distribution by states is shown in table C, which also gives the same data for Dec. 31, 1939. It will be noted that there has been an increase of 271 in the number of unfilled appointments.

1. "Special internships," later classified as residencies and fellowships, are not included.

Although statistics are not yet available on the number of approved internships held by graduates of approved schools repeating the intern year, and by graduates of schools in foreign countries, it is probable that both groups have diminished. As will be noted later, residency and fellowship appointments have greatly increased. It seems reasonable to assume that a graduate who has completed his intern year prefers to take a residency appointment rather than to serve a second internship. The war situation, of course, has undoubtedly reduced the flow of graduates of European schools.

During the year 1940 the Council on Medical Education and Hospitals admitted thirteen hospitals to the approved intern list. Twenty-five hospitals either withdrew or were removed. In February 1941 four additional hospitals were approved, and applications for approval are still being received.

Additional information concerning hospitals approved for training interns and approved residencies and fellowships appears each year in the Educational Number of THE JOURNAL, which is usually published in August.

NECROPSY PERFORMANCE IN INTERN HOSPITAL

Tentative data indicate that forty-one hospitals may have achieved the laudable record of postmortem studies on 70 per cent or more of their deaths (excluding stillbirths and medicolegal cases released without a necropsy being performed by the attending pathologist). In each instance the data will be confirmed and a list of these hospitals will be published in THE JOURNAL at a later date.

In table D is shown the trend of necropsy rates in approved intern hospitals. It will be noted that the

upward trend continues. This is further borne out by calculating the ratio of the total necropsies in approved hospitals to the number of death cases available for post-mortem study. In 1938 there was a total of 77,277 necropsies representing 37.6 per cent of the deaths. In 1939 the figures were 79,262 necropsies and 37.8 per cent. In 1940 the necropsies increased to 81,849 and the ratio to 38.9 per cent.

The attention of all hospitals is again called to the minimal necropsy requirements in approved intern hospitals. The old requirement of 15 per cent of deaths other than stillbirths is still in effect. In addition a

new requirement of not fewer than thirty-six necropsies, not counting stillbirths, became effective starting with the calendar year 1940. This change in the "Essentials in a Hospital Approved for Training Interns" was announced in a letter accompanying the "Annual Census Blank and Report on Internships and Residencies" sent to approved hospitals on Dec. 31, 1938. It was also published in the *THE JOURNAL*, Aug. 26, 1939, pages 792 and 793.

RESIDENCIES AND FELLOWSHIPS

At the annual meeting of the American Medical Association in Philadelphia in 1931 a resolution was introduced in the House of Delegates requesting the appointment of a Commission on Qualifications for Specialists. It was to be the function of this commission to consider the type of educational training, clinical experience and other qualifications necessary for those who might wish to be recognized as proficient in any of the special fields of medicine. Examining and certifying boards had already been established in ophthalmology, otolaryngology, obstetrics-gynecology and dermatology-syphilology, but there was need for a national and uniform standard governing all fields of medical practice in order that properly qualified physicians might readily be differentiated from the self-appointed specialists.

It was only natural that the Council on Medical Education and Hospitals should take an active part in this program, since it had long been concerned with the preparation of standards in connection with medical schools, internships and residencies and in the recognition of qualified physicians specializing in pathology and radiology. Recognizing the need of centralized coordination and control, the House of Delegates in 1933 authorized the Council to formulate standards and officially approve such boards as would meet these requirements. It was also urged that the machinery of the American Medical Association, including the publication of its Directory, be used in furthering the work of boards accredited under this plan. Cooperating with the Council is the Advisory Board for Medical Specialties, organized in 1934 to "act in an advisory capacity to such organizations as may seek its advice concerning the coordination of the education and certification of medical specialists."

Standards governing the approval of specialty boards were adopted by the Council in June 1934 and approved by the House of Delegates. At that time similar regulations were established by the Advisory Board. These standards relating to the organization and operation of the boards contain also the minimum qualifications required for certification as a specialist. The latter include graduation from an approved medical school, an internship of not less than one year in a hospital acceptable to the Council, and a period of specialized training of at least three years in a selected field.

Sixteen specialty boards voluntarily organized in accordance with these standards are now fully approved by the Council:

American Board of Anesthesiology,
Paul M. Wood, M.D., Secretary-Treasurer,
745 Fifth Avenue, New York City.

American Board of Dermatology and Syphilology,
C. Guy Lane, M.D., Secretary-Treasurer,
416 Marlboro Street, Boston.

American Board of Internal Medicine,
William S. Middleton, M.D., Secretary-Treasurer,
1301 University Avenue, Madison, Wis.

American Board of Neurological Surgery,
R. Glen Spurling, M.D., Secretary-Treasurer,
404 Brown Building, Louisville, Ky.

American Board of Obstetrics and Gynecology,
Paul Titus, M.D., Secretary-Treasurer,
121 South Highland Avenue, Pittsburgh.

American Board of Ophthalmology,
John Green, M.D., Secretary-Treasurer,
6830 Waterman Avenue, St. Louis.

American Board of Orthopaedic Surgery,
Fremont A. Chandler, M.D., Secretary-Treasurer,
6 North Michigan Avenue, Chicago.

American Board of Otolaryngology,
William P. Wherry, M.D., Secretary-Treasurer,
107 South Seventeenth Street, Omaha.

American Board of Pathology,
Frank W. Hartman, M.D., Secretary-Treasurer,
2799 West Grand Boulevard, Detroit.

American Board of Pediatrics,
C. Anderson Aldrich, M.D., Secretary-Treasurer,
707 Fullerton Avenue, Chicago.

American Board of Plastic Surgery,
Vilray P. Blair, M.D., Secretary-Treasurer,
400 Metropolitan Building, St. Louis.

American Board of Proctology,
(subsidiary of American Board of Surgery),
Louis J. Hirschman, M.D., Chairman,
7815 East Jefferson Avenue, Detroit.

American Board of Psychiatry and Neurology,
Walter Freeman, M.D., Secretary-Treasurer,
1028 Connecticut Avenue N.W., Washington, D. C.

American Board of Radiology,
Byrl R. Kirklín, M.D., Secretary-Treasurer,
102 Second Avenue S.W., Rochester, Minn.

American Board of Surgery,
J. Stewart Rodman, M.D., Secretary-Treasurer,
225 South Fifteenth Street, Philadelphia.

American Board of Urology,
Gilbert J. Thomas, M.D., Secretary-Treasurer,
1009 Nicollet Avenue, Minneapolis.

The Council has undertaken a program of collaboration with the specialty boards aimed at uniformity in the investigation and appraisal of educational opportunities and at the elimination of unnecessary effort in the inspection of hospitals training resident physicians. Formal agreements have already been entered into with

* Number of hospitals approved for residencies and fellowships, 610.

ten of the boards, and three others have indicated their desire to work with the Council in the evaluation of residencies, fellowships and other forms of graduate training. Under this plan, official information is first secured from hospitals on blanks printed in triplicate so that one copy may be retained by the hospital, one will be available to the Council and one to the specialty board. If it appears that the hospital is in position to offer a residency program in accordance with present standards, a visit of inspection is carried out by a member of the Council's staff. A copy of the inspection report is then forwarded to the examining board to supplement the information supplied in the original application blank. When the recommendation of the board is at hand, the application for residency approval is submitted for Council action. In this manner it is expected that the final conclusions of the Council and the boards will be identical, so that residencies and fellowships approved by the Council will be equally acceptable to the certifying boards.

This cooperative plan was outlined in THE JOURNAL, March 30, 1940, pages 1172-1173. Reference should also be made to page 978 of the March 26, 1938 issue, which gives more detailed information concerning the inspection and evaluation of residencies in specialties. The new "Essentials of Approved Residencies and Fellowships," formulated with the assistance of the various specialty boards, were published in THE JOURNAL, Aug. 26, 1939, pages 794-799.

At present there are 610 hospitals regarded as capable of furnishing acceptable training in the various specialties indicated in table E. These approved institutions

report 1,599 positions as assistant residencies, 2,929 as residencies and 728 as fellowships with appointments usually of one, two or three years' duration, although assignments of six and even seven years have also been noted. Detailed information concerning these services is published annually in the Educational Number of THE JOURNAL.

Table F shows the increase in number of residencies since 1927, when the first list was published by the Council. Prior to that time a classification of special internships was included in the regular intern list. Thus in 1914 there were 428 special internships listed, while ten years later 595 were so designated. During that ten year period the hospitals offering specialized training increased from 95 to 150. Since 1927 the opportunities for residency training have tripled in number. This indicates not only a growing professional interest in specialization but also an evident desire on the part of hospitals to foster and promote the advanced training of young physicians.

The rapid increase in recent years is attributable mainly to the certifying program of the American boards and the resulting emphasis on specialization in private and hospital practice. Many institutions have been stimulated by the growing demands for graduate training to develop residencies in specialties or to expand services already in operation. In some instances the assignments have also been lengthened to provide the full range of clinical and basic training required for certification. Certain tendencies have been noted that may presage a further spread of residency training in the hospital field. Possibly as a result of economic conditions or the uncertainties of the present era an increasing number of graduates are remaining in hospital service beyond the regular one or two year internship. Usually they are anxious that the additional training shall count toward certification and thus new applications for residency approval will ordinarily result unless their service is already recognized. It has also been observed that institutions that have been unable to secure the desired number of interns will frequently supplement their house staff by the appointment of general or special residents. Then too there is the general desire on the part of hospitals to utilize their

TABLE F.—Residencies in Specialties, 1927-1941

educational facilities to the fullest extent. It should be realized, however, that Council approval for residency training places on the medical staff a major obligation to furnish educational opportunities in accordance with current standards. The continuation of approval depends not merely on the adequacy of equipment and flow of clinical material but more especially on the cooperation of the staff in amply fulfilling the obligations of a residency training program.

HOSPITALS REGISTERED BY THE AMERICAN MEDICAL ASSOCIATION

The following list contains the names of 6,291 hospitals, sanatoriums and related institutions that are located in the United States and 277 in Alaska, Canal Zone, Guam, Hawaii, Philippines, Puerto Rico and Virgin Islands. The list for each state is presented in two groups: (1) hospitals and sanatoriums, and (2) related institutions. The related institutions include school and prison infirmaries, nursing homes and other institutions designed to give certain medical and nursing care in an ethical and acceptable manner, without giving a full hospital service.

Registration of hospitals is governed by the Essentials of a Registered Hospital, adopted by the House of Delegates in 1928 and revised in 1939.

Registration is a basic recognition, extended to all the hospitals and related institutions in the following list, concerning which we have no evidence of irregular or unsafe practices. Approval is designation of certain registered institutions by the Council on Medical Education and Hospitals for internships, residencies and fellowships; or by the American College of Surgeons as unconditionally meeting its minimum standards.

KEY TO SYMBOLS AND ABBREVIATIONS

- * Approved for training interns by the Council on Medical Education and Hospitals. List with detailed information is sent on request.
- + Approved for residencies or fellowships. List with detailed information is sent on request.

- ▲ Approved by American College of Surgeons as meeting unconditionally its minimum standards.
- ◊ School of nursing accredited by state board of nurse examiners.
- ◊ Affiliated for nurse training on state accredited basis.
- † Figures for "average census" and "admissions" are exclusive of newborn infants.

The column headed "Type of Service" tells what diseases are treated in each institution:

Card	Cardiac	ENT	Eye, ear, nose and throat	Inst	Institutional	N&M	Nervous and mental
Chil	Children	Gen	General	Mat	Maternity	Orth	Orthopedic
Chr	Chronic	Incur	Incurable	MatCh	Maternity and children	SkCa	Skin and cancer
Conv	Convalescent and rest	Indus	Industrial	McDe	Mentally deficient	TB	Tuberculosis
Drug	Drug and alcoholic	Iso	Isolation	Ment	Mental	Ven	Venereal
Epi	Epileptic						

The column headed "Control" indicates control, or auspices under which the institution is conducted:

GOVERNMENTAL			NONPROFIT ORGANIZATIONS		PROPRIETARY	
Fed	Federal	State City County City-County CyCo	Church	Nonprofit Association	Indiv	Individual
IA	Indian Affairs		NPAssn		Part	Partnership
Army	United States Army				Corp	Corporation (unrestricted as to profit)
Navy	United States Navy					
USPHS	United States Public Health Service					
Vet	Veterans Administration Facility					

The accompanying list was corrected by additions and removals of hospitals up to the time of going to press; totals of the list, therefore, may vary from tables 1 and 2, which were necessarily compiled earlier.

SATURDAY, MARCH 15, 1941

INTERNS—SUPPLY AND DEMAND

At present, probably more than ever previously, a need for clear thinking on the subject of the supply of interns in relation to the demand by hospitals for their services is desirable. Some hospitals have been unable to secure any interns and others have not secured their usual number. The demand exceeds the supply. The size of senior classes in approved medical schools has remained almost constant since 1934, while the number of appointments available each year in approved hospitals has steadily increased. Although statistics are not yet available, the number of graduates of European schools seeking internships in this country has diminished greatly within the past year. While the number of interns recruited from this source has never been large, the recent decrease has served to accentuate the disproportion between supply and demand.

The approved medical schools with their present facilities cannot increase the size of their classes without sacrificing accepted educational standards. Furthermore, the function of medical schools is to educate physicians to supply the medical needs of the country, not merely to develop young physicians to meet the demand of hospitals for low cost house staff personnel. Until approved medical schools are able to train more students (assuming that more applicants could qualify for admission) the supply of prospective interns will not increase.

Even the present flow of graduates from approved schools into internships may be reduced by the selective service act. The crucial needs of the preparation for national defense, especially the necessity of expanding the Army and Navy Medical Corps, will no doubt reduce still further the number of graduates available for hospital service beyond the first year of intern training. This will affect hospitals which have internships more than one year in length as well as those which have extended training services in the form of residencies.

No doubt graduates will continue to prefer appointments in hospitals that provide the best training for internships and residencies. These are the hospitals in which attending staffs are not only unusual in ability but, even more important, most willing to give their time to the instruction of the house staff. There will probably also be a continued preference for hospitals with large charity wards, especially those with long established educational services.

With these considerations clearly before them, the boards of hospitals which have experienced difficulty in attracting the usual number of interns and residents may examine their problem and prepare to make the necessary adjustments. Physicians in many localities have taken for granted the provision, by the administration of hospitals, of medically trained personnel capable of relieving the physicians of certain time-consuming procedures necessary to the care of patients. The attending physicians should realize two principles of basic importance in this connection: First, interns and residents are employed on an apprenticeship basis whereby the compensation for their services is mainly the instruction they receive from the attending staff. Second, the duties performed by house staff personnel are properly the responsibility of the individual attending physicians, not that of the hospital administration. In the absence of sufficient house staff assistance, the attending men may well find it necessary to perform these tasks for some or even all of their patients.

USE AND MISUSE OF HOSPITAL STATISTICS

A greater percentage of the hospital facilities of the United States were occupied during 1940 than for any other year for which records are available. The proportion of general hospital beds in use has risen during the past year from 69.2 per cent to 70.3 per cent. This is the first year that the occupancy of general hospitals has risen above 70 per cent. This is in strict contrast with the situation in 1933, when there was only 59.9 per cent occupancy. Where is the saturation point? What is a reasonable supply of facilities per given unit of population?

The numerous studies that have been made by competent persons have led to some helpful conclusions. General hospitals cannot have their beds 100 per cent occupied. As an emergency institution a general hospital does not have patients waiting in line. Time is required to prepare a room after the discharge of a patient. Rooms, wards and even whole floors in buildings must be closed for renovation and repairs. Then too there are seasonal fluctuations. In many hospitals there are clinical classifications of patients, such as medical and surgical sections. Separations, particularly of ward patients, are based on sex. Rooms vary in

expensiveness. After these variations have been accommodated there must still be a reserve for emergencies. Large hospitals can usually maintain a higher rate of occupancy than small hospitals.

Those who are best qualified to advise with regard to amount of facilities now say that the optimal rate of occupancy in general hospitals usually approximates 75 to 85 per cent. All agree that it varies and that a definite formula cannot be established—each hospital in each community is an individual case. The provision of additional facilities should always be based on the present and future needs of the community as determined through study of the need in relation to available facilities, including expert counsel and interpretation, but always with a liberal use of common sense.

Hospitals should be built only where there are people to be served and where both professional talent and means for support are available.

The cooperation of hospital administrators and other officers in making possible the vast amount of reliable information presented in the preceding pages is gratefully acknowledged.

IMMUNITY VS. ANTIBODY TITER IN POLIOMYELITIS

Detailed studies of immunity in monkeys convalescent from poliomyelitis are reported by Kessel and Stimpert¹ of the University of Southern California School of Medicine. Their data seem to furnish the first statistically adequate evidence of the lack of correlation between tissue immunity and antibody titer in this disease.

Occasional discrepancy between serum titer and susceptibility to poliomyelitis has been suggested by numerous investigators. Schultz, Gebhardt and Bullock,² for example, found that specific complement fixing and precipitating antibodies are often absent from the serum of hyperimmunized convalescent monkeys. This was confirmed by Sabin and Olitsky,³ who found that experimentally infected monkeys often develop a resistance to intranasally instilled homologous virus before virucidal antibodies can be detected in their blood stream. In contrast, Olitsky and Cox⁴ found that virucidal antibodies are often produced as a result of the injection of chemically killed viruses, without the production of demonstrable resistance to homologous infection. None of these tests, however, were adequate to establish the mathematical frequency of such discrepancies.

1. Kessel, J. F., and Stimpert, F. D.: *J. Immunol.* **40**: 61 (Jan.) 1941.

2. Schultz, E. W.; Gebhardt, L. P., and Bullock, L. T.: *J. Immunol.* **21**: 171 (Sept.) 1931.

3. Sabin, A. B., and Olitsky, P. K.: *J. Exper. Med.* **61**: 739 (Nov.) 1936.

4. Olitsky, P. K., and Cox, H. R.: *J. Exper. Med.* **63**: 109 (Jan.) 1936.

In the research of the southern California investigators, six different strains of poliomyelitis virus were used, varying from the highest virulent to the lowest virulent strains thus far isolated. One hundred and forty-nine convalescent monkeys were retested by intracerebral injection of 10 minimum lethal doses of homologous or heterologous strains. Kessel found that 61 per cent of these convalescent monkeys exhibited a complete immunity to reinfection with their arbitrary test dose. In addition, 30 per cent of the convalescent monkeys showed a partial immunity manifest by a reduced death rate. The highest percentage of immunity was observed in animals retested with homologous virus. Percental variations were observed with different vaccines, ranging from 47 per cent complete immunity for the least effective vaccine to 86 per cent for the most effective (average 61 per cent).

Serologic tests were made on 100 of the convalescent monkeys immediately before the immunity test. Twenty-eight of these monkeys showed positive *in vitro* neutralization antibodies associated with complete immunity. In contrast, 31 demonstrably immune monkeys yielded negative serums, while 19 nonimmune monkeys yielded positive serologic titers. The remaining 22 monkeys gave negative results in both immunity and serologic tests. Summarizing their results, Kessel and Stimpert conclude that positive correlation between immunity and serum titer existed in but 50 per cent of their convalescent monkeys. With a positive serum titer, therefore, there is only one chance in two that the animal is immune. With such a low percentage of correlation, virucidal titer lacks diagnostic significance. Evidently the dominant or essential factor in poliomyelitis immunity does not exist in the form of circulating antibodies.

REDUCING MEDICAL FACILITIES

A new attitude is apparently influencing recent medical surveys. In the past these have been conducted too largely by persons without medical training who were mainly concerned in laying the groundwork for an argument for some sort of profound change in medical service. The first extensive survey to secure the wide cooperation of all those sufficiently concerned with medical matters to have specific information was the one conducted by the American Medical Association on "Medical Care in the United States—Demand and Supply."

The survey of Rochester, N. Y., by Dr. Wilson G. Smillie is an example of the new and much more valuable type of survey that it is hoped may displace the old ones.¹ A collection of the factual data as to existing facilities for the care of the sick in 1930, 1935 and 1940 showed the existence of certain definite

1. Smillie, Wilson G.: *A Survey of the Facilities for the Care of the Sick of Rochester, New York, Conducted for the Survey Committee of the Rochester Community Chest, Inc., January 1941.*

trends: (1) an increase in hospitalization cost due to increased demands for hospital bed care, (2) increased cost of hospitalization due largely to better and more expensive service, (3) change in the type of demand for hospital facilities, particularly an increasing demand for hospitalization of chronic disease due to aging of the population, and (4) an extraordinary increase in hospital insurance.

The Monroe County Medical Society undertook to judge the adequacy of existing facilities. The reason for this action was that:

The obvious fact that the practicing physician is the keystone of all medical care is frequently overlooked or forgotten. *He is medical care.* All the facilities—hospitals, clinic services, laboratories, nursing service, technical equipment and the like—are the tools with which he must do his work. Who, then, should know better than the physician whether or not his tools are adequate? Who is a better judge of the defects of the equipment with which he must accomplish his tasks?

The physicians recognized the need of the following facilities: more low cost hospital beds for care of acute illness of private patients; better provisions for psychiatric care in general hospitals and additional outpatient facilities in psychiatry; more beds for the chronic sick, especially for arthritis and heart disease, and more facilities for the care of convalescents and especially for mental and dental care.

A new feature of this survey is an analysis of public opinion conducted by an expert in this type of survey. The inadequacies which the public believe existed agree closely with those of the physicians. One of the questions was to determine the attitude of the public toward medical insurance. While a decided majority expressed themselves in favor of some type of medical insurance, it was found, when these replies were broken down by income classes, that few of those in favor of it could afford such insurance and that the "theoretical potential market" for such insurance was only about 17 per cent of the total population. Ninety-five per cent of the public gave a negative answer to the question "Has your family ever had any kind of difficulty in securing it when they needed medical, hospital or nursing care?" Ninety-two per cent stated that they did not know of any family in Rochester that needed such care and was unable to get it.

It may be significant of the confused character of the propaganda for "socialized medicine" that 43 per cent when asked "What, in your opinion, does the term 'socialized medicine' mean?" replied "Don't know" and that the rest gave replies that showed that they had little idea of the meaning of such a term.

That the "family doctor" has not disappeared may be suggested by the fact that 80 per cent stated that when they wished to call a doctor they would "usually go to the same doctor" and that 95 per cent of them preferred an M.D. to any other type of practitioner.

Current Comment

INCREASING HOSPITAL COSTS

In March 1940 the annual report of the Bridgeport, Conn., Hospital giving figures since the beginning of the century was analyzed to show, among other things, how the cost per patient day had increased from \$1.32 in 1899 to \$5.04 in 1939.¹ The latest report of the same hospital adds another column of data covering forty years of hospital experience. The additional information gives the average hospital cost per patient by years. This cost, which was \$44.88 in 1899, then declined irregularly to a low of \$25.11 in 1913. Probably much of this decline was due to falling prices during this period. From this point the rise has been general until in 1940 it was \$54.88, or more than twice as much as in 1913. Depression conditions probably account for the temporary decline from 1930 to 1935. The steady rise which followed can possibly be best explained by the great advances in medicine and hospital administration since the war of 1914-1918. Incidentally, the Bridgeport Hospital administrators seem to be entitled to favorable mention for having reduced their annual deficit in 1940 to the lowest point since 1919. This has been done in the face of declining gifts, which have to some extent been replaced by increased income from group hospitalization.

CARBOHYDRATE FORMATION FROM THREONINE

A portion of the amino acids commonly yielded on digestion gives rise to the formation of sugar in the organism. The classic work of Lusk evaluated this function for those amino acids known before 1920. Vars¹ showed the glycogenic nature of methionine, which was discovered in 1921. Hall and his associates² have reported on the role assumed by threonine in the formation of carbohydrate. Since conclusive proof of the presence of alpha-amino-beta-hydroxybutyric acid in proteins was established,³ information regarding the metabolic pathways that this compound might follow in the organism has been awaited. The fact that threonine was found to be an indispensable amino acid served to heighten the interest of investigators in its metabolism. Now it has been reported that both dl-threonine and the optical isomer dl-allothreonine form glycogen in the rat and may thus be classed as glycogenic amino acids. It has, moreover, been found that experimental ketonuria in rats is ameliorated when the animals are fed either of these amino acids. The significant reduction in excretion of acetone bodies observed in this instance is likewise indicative of the potentialities of these amino acids for carbohydrate formation in the body.

MEDICAL PREPAREDNESS

In this section of The Journal each week will appear official notices by the Committee on Medical Preparedness of the American Medical Association, announcements by the Surgeon Generals of the Army, Navy and Public Health Service, and other governmental agencies dealing with medical preparedness, and such other information and announcements as will be useful to the medical profession.

ARMY RESERVE OFFICERS ORDERED TO ACTIVE DUTY SECOND CORPS AREA

The following additional medical reserve corps officers have been ordered to duty by the Commanding General, Second Corps Area, which comprises the states of New York, New Jersey and Delaware:

- ADLER, Daniel K., 1st Lieut., Syracuse, N. Y., Fort Bragg, N. C.
ADLER, Harry, 1st Lieut., Elmira, N. Y., Camp Peay, Tenn.
ALONZO, Gerard J., 1st Lieut., Lyndhurst, N. J., Camp Forrest, Tenn.
ANDERSON, Albert V., 1st Lieut., New York, Fort Devens, Mass.
ANGIOLETTI, Louis V., 1st Lieut., Fort Lee, N. J., Fort Monmouth, N. J.
BAMBARA, Aurelius J., 1st Lieut., Flemington, N. J., Camp Forrest, Tenn.
BAR, Samuel, 1st Lieut., Englishtown, N. J., Camp Forrest, Tenn.
BARON, Benjamin, Captain, Astoria, N. Y., Fort Jackson, S. C.
BASHEIN, Gus, Captain, Forest Hills, N. Y., Fort Hancock, N. J.
BATTISTA, Louis C., 1st Lieut., Watertown, N. Y., Casey Jones's Aeronautical School, Newark, N. J.
BAUMANN, Frank A., Jr., 1st Lieut., Binghamton, N. Y., Camp Forrest, Tenn.
BEDNARKIEWICZ, Ignatius A., Captain, Schenectady, N. Y., Camp Croft, S. C.
BETCHER, Albert M., 1st Lieut., Jersey City, N. J., Camp Forrest, Tenn.
BICK, Edgar M., Captain, New York, Fort Monmouth, N. J.
BIUNNO, Anthony J., 1st Lieut., Newark, N. J., Fort Bragg, N. C.
BLASH, Andrew A., 1st Lieut., Elmira, N. Y., Camp Forrest, Tenn.
BLONSTEIN, Max, 1st Lieut., Brooklyn, Fort Ethan Allen, Vt.
BOLTEN, Bernard, 1st Lieut., Newark, N. J., Camp Claiborne, La.
BRADFORD, Vance A., 1st Lieut., Syracuse, N. Y., Camp Blanding, Fla.
BROWN, Leonard, 1st Lieut., Ridgfield, N. J., Camp Forrest, Tenn.
BROWN, Walter E., Jr., 1st Lieut., Schenectady, N. Y., West Point, N. Y.
BROWN, William, 1st Lieut., Long Island City, N. Y., Fort Monmouth, N. J.
BUCKBEE, Harold F., 1st Lieut., Dolgeville, N. Y., Madison Barracks, N. Y.
CAMPANELLA, Paul J., 1st Lieut., Fulton, N. Y., Fort Ontario, N. Y.
CARBONE, Ralph, 1st Lieut., Coytesville, N. J., Camp Livingston, La.
CHILDRESS, Harold McF., 1st Lieut., Jamestown, N. Y., Camp Croft, S. C.
CHRISTOPH, Francis T., 1st Lieut., Maplewood, N. Y., Camp Claiborne, La.
COHEN, Abraham G., Captain, New York, Induction Station, Albany, N. Y.
COTTON, Thomas S., 1st Lieut., Hornell, N. Y., Camp Croft, S. C.
CRUDEN, Allen B., Jr., 1st Lieut., Montclair, N. J., Fort Jackson, S. C.
D'ADDARIO, Anthony R., 1st Lieut., Newark, N. J., Fort Jackson, S. C.
D'AMANDA, William, 1st Lieut., Rochester, N. Y., Camp Croft, S. C.

ZUSSMAN, Bernard, 1st Lieut., New York, Camp Claiborne, La.

THIRD CORPS AREA

The following additional medical reserve corps officers have been ordered to extended active duty by the Commanding General, Third Corps Area, which comprises the states of Pennsylvania, Virginia, District of Columbia and Maryland:

BOYZER, Oren Douglas, 1st Lieut., Rural Retreat, Va., Fort Eustis, Va.
BUCCARD, Harry Williams, 1st Lieut., Williamsport, Pa., Fort Belvoir, Va.
CAMPANA, Frederick Thomas, Captain, Monessen, Pa., Camp Lee, Va.
DEGNAN, Philip Augustus, 1st Lieut., Washington, D. C., Camp Lee, Va.
DVORCHAK, George Edward, 1st Lieut., Patton, Pa., Camp Lee, Va.
FRALEY, Henry Watson, 1st Lieut., Leechburg, Pa., Camp Lee, Va.
GREEN, Manuel Edwin, Captain, Pittsburgh, Fort Eustis, Va.
GUTHRIE, Michael Aloysius, Captain, Pittsburgh, Fort Belvoir, Va.
HANES, William James, Captain, Strafford, Pa., Fort Belvoir, Va.
HEIMBACH, James Alvin, Major, Altoona, Pa., Camp Pendleton, Va.
KILDAY, John, Captain, Frostburg, Md., Fort Belvoir, Va.
LAUGHLIN, Kenneth Francis, 1st Lieut., Washington, D. C., Fort Belvoir, Va.
LESLIE, Frank George, 1st Lieut., Butler, Pa., Camp Lee, Va.
LISKA, John Robert, 1st Lieut., Greensburg, Pa., Camp Lee, Va.
MATEER, Eugene Henry, 1st Lieut., State College, Pa., Fort Benning, Ga.

MEDOF, Milton Irving, Captain, Pittsburgh, Savannah Air Base, Savannah, Ga.
MINTER, James William, Captain, Ridgway, Pa., Camp Lee, Va.
MORAN, John Anthony, 1st Lieut., Baltimore, Langley Field, Va.
MORGAN, Thomas Addison, 1st Lieut., Franklin, Va., Fort Story, Va.
PURVIS, James David, 1st Lieut., Pittsburgh, Camp Lee, Va.
RICHARDSON, Emmett Vynston, Captain, Marion, Fort Eustis, Va.
ROBBINS, Leo Edward, 1st Lieut., Philadelphia, Camp Lee, Va.
SILVER, Sam, 1st Lieut., Waynesboro, Pa., Fort Belvoir, Va.
SILVERBLATT, Bernard Leslie, 1st Lieut., Pittsburgh, Camp Lee, Va.
SNEAD, Howard Garnett, 1st Lieut., Franklin, Va., Fort Eustis, Va.
STEIN, Milton Robert, 1st Lieut., Baltimore, Fort Belvoir, Va.
STOCK, Aaron Hirsh, 1st Lieut., Pittsburgh, Fort Belvoir, Va.
THOMAS, Henry Malcolm, Jr., Major, Baltimore, Fort George G. Meade, Md.
THOMAS, John Lloyd, 1st Lieut., Greenville, Pa., Fort Belvoir, Va.
ZUPNIK, Howard Lester, 1st Lieut., Baltimore, Camp Lee, Va.

CORRECTION

Major Pelzman Instead of Reizman.—In the Medical Preparedness section of THE JOURNAL, March 1, page 843, under the Third Corps Area, the name Major Reizman, Ivy Albert, was erroneously spelled and should have been Pelzman, Ivy Albert.

FIFTH CORPS AREA

The following additional medical reserve officers have been ordered to active duty by the Commanding General, Fifth Corps Area, which comprises the states of Ohio, West Virginia, Indiana and Kentucky:

BAKER, Simeon S., 1st Lieut., Lynch, Ky., Fort Knox, Ky.
BARNETT, William E., 1st Lieut., Logansport, Ind., Fort Knox, Ky.
BLEMKER, Russell M., Captain, Greensburg, Ind., Fort Knox, Ky.

CARLISLE, Richard C., 1st Lieut., Columbus, Ohio, Fort Knox, Ky.
GREER, Oliver W., Captain, Indianapolis, Fort Knox, Ky.
JONES, Francis P., Captain, Indianapolis, Fort Knox, Ky.
LAKE, Willard, Major, McHenry, Ky., Fort Knox, Ky.
KOSTOFF, Albert, Captain, Columbus, Ohio, Fort Knox, Ky.
STARCHER, Everett H., Major, Earling, W. Va., Charleston, W. Va.
STONE, Sydney R., Captain, Cleveland, Fort Knox, Ky.
SUTTON, William E., 1st Lieut., Edinburg, Ind., Fort Knox, Ky.
TOTH, Daniel F., Captain, Cleveland, Fort Knox, Ky.

MEDICAL SUPPLIES FOR GREECE

Five tons of medical and surgical supplies has been shipped to Greece by the Medical and Surgical Supply Committee of America in response to an appeal issued in February by Dr. Haven Emerson, New York, chairman of the American Physicians' Committee to Aid Greece. The shipment included four operating tables, nine thousand tablets of sulfathiazole, five hundred vials of tetanus antitoxin, surgical dressings, antiseptics, vitamins, sedatives and concentrated foods. The committee's announcement said that more than two hundred and eighty-five physicians and surgeons in the principal cities of the United States assisted in the drive for raising funds and collecting the supplies.

Two ambulances for the Greek army, one contributed by the students and faculty of Columbia University, New York, and the other by colleges and universities throughout the United States and Canada, were presented to the Greek government through the Greek consul general in New York with ceremonies on the Columbia campus, February 23.

COURSE IN MILITARY MEDICINE

The American College of Physicians has arranged as one of its annual postgraduate courses a course in military medicine, to be given April 7-18 under the auspices of the Army Medical Corps, the Navy Medical Corps and the U. S. Public Health Service. The directors of the program will be Col. Charles C. Hillman, U. S. Army; Lieut. Col. William C. Munly, U. S. Army; Comdr. Frederick R. Hook, U. S. Navy, and Dr. Roscoe Spencer, U. S. Public Health Service. The minimal registration will be twenty-five and the maximal seventy-five. Instruction will be offered at Walter Reed General Hospital, the U. S. Naval Hospital and at the headquarters

of the U. S. Public Health Service by a large number of officers of the services stationed in Washington and by some speakers from outside Washington. Among the subjects listed for the course are physical standards for selection of military personnel, detection of tuberculosis in selectees, food inspection, deficiency diseases, shock and the use of blood and blood substitutes, war neuroses, venereal diseases, aviation medicine, subsurface medicine, epidemiology, immunization and treatment of communicable and infectious diseases (other than venereal), industrial medicine and tropical medicine.

NEW SOCIETY OF SELECTIVE SERVICE

The Maryland Society of Selective Service has been created with Dr. Sydney R. Miller, Baltimore, as permanent chairman. This is a volunteer organization for the discussion of problems that arise in selective service work, which aims to render uniform throughout Maryland the interpretation of regulations. At a meeting on January 31 Dr. Charles R. Austrian, Baltimore, was chairman of the organization committee. At a statewide meeting on February 28 plans for the society were drawn up. There are no dues.

MILITARY MEDICINE PROGRAM AT CLEVELAND ACADEMY

At a meeting of the Military Medicine section of the Academy of Medicine of Cleveland, February 24, Col. John C. Darby, Medical Reserve Corps, discussed "Current Progress of the Military Mobilization Plan" and Dr. George M. Saunders, visiting lecturer for tropical diseases at Western Reserve University School of Medicine and epidemiologist for the Leonard Wood Memorial, spoke on "Medical Problems of the Caribbean Area in Relation to National Defense."

ORGANIZATION SECTION

AMERICAN MEDICAL ASSOCIATION ON TRIAL

THE TRIAL OF THE CASE OF THE UNITED STATES OF AMERICA
VS.

THE AMERICAN MEDICAL ASSOCIATION, A CORPORATION, THE MEDICAL SOCIETY OF THE DISTRICT OF COLUMBIA, A CORPORATION, THE HARRIS COUNTY MEDICAL SOCIETY, AN ASSOCIATION, THE WASHINGTON ACADEMY OF SURGEONS, AN ASSOCIATION, ARTHUR CARLISLE CHRISTIE, COURSEN BAXTER CONKLIN, JAMES BAYARD GREGG CUSTIS, WILLIAM DICK CUTTER, MORRIS FISHBEIN, THOMAS ALLEN GROOVER (DECEASED), ROBERT ARTHUR HOOE, ROSCO GENUNG LELAND, THOMAS ERNEST MATTINGLY, LEON ALPHONSE MARTEL, FRANCIS XAVIER MC GOVERN, THOMAS EDWIN NEILL, EDWARD HIRAM REEDE, WILLIAM MERCER SPRIGG, WILLIAM JOSEPH STANTON, JOHN OGLE WARFIELD JR., OLIN WEST, PRENTISS WILLSON, WILLIAM CREIGHTON WOODWARD, WALLACE MASON YATER, JOSEPH ROGERS YOUNG.

(Continued from page 1009)

FEBRUARY 24—MORNING

(In the absence of the jury, the Court gave his decision not to admit the proceedings of the hearings of Drs. Lee and Scandiffo before the District of Columbia Medical Society.)

In his decision the Court said it seemed to him that the record would serve no good purpose and that there is no reasonable grounds for its admission. It would lead to a prolonged indefinite diversion of this case through the trial of the issues on that phase, collateral in their nature. It is impossible to see where such a diversion would lead to. It would certainly becloud and confuse the issues in this case and make a case which by its very nature, by its length and many details involved, and the extended indictment on which it is predicated, more difficult than in its nature it is.

TESTIMONY OF WILLIAM C. KIRKPATRICK
DIRECT EXAMINATION

By Mr. Lewin:

William C. Kirkpatrick said he is employed in the auditing division of the Reconstruction Finance Corporation, assigned to the Curtiss Aeroplane Division of the Curtiss-Wright Corporation in Buffalo. In 1937 and 1938 he was supervisor of tax section for the Home Owners Loan Corporation. He first became actively interested in Group Health Association in January 1937. At the time he was a director of the Federal Credit Union that was in existence in the Home Owners Loan Corporation. He first heard about Group Health from Mr. Raymond R. Zimmerman who was then the personnel director of the Home Owners Loan Corporation. He attended the first organization meeting of January 1937. This organization meeting was held in the departmental auditorium on Constitution Avenue, between Fourteenth and Fifteenth. About two hundred or three hundred employees of the Home Owners Loan Corporation were present. The organization was formed and the members were asked whether or not they would be interested in forming such an organization; and the president of the organization was elected; and the secretary and treasurer, and some of the trustees. In April 1937 he was elected vice president by the board of trustees. Mr. William F. Penniman was elected president; Mr. Raymond T. Berry was elected secretary and treasurer, and Mr. C. K. Berlin was elected assistant treasurer. He became president in January 1938.

Q.—January 18. Now, tell the jury, if you will, what were the facts with regard to the hospitalization of Group Health patients when you became president in January of 1938.

A.—Well, I found there was a continued stalemate with respect to admission of the members of our staff to the courtesy privileges in hospitals in Washington. That was the situation which confronted me when I became president.

Q.—Were there any cases awaiting hospital treatment?

A.—There were at the time I became president approximately 75 elective operations on the books.

Q.—What is an elective operation?

A.—Well, an elective operation is one where an operation may be necessary where the patient elects to have it; as distinguished from an emergency operation which must be performed, regardless.

Q.—Now, you say they were on the books. What does that mean?

A.—They were on our books for attention. They had come in and been examined and the physicians had determined that these operations were necessary sometime or other.

Q.—And were they receiving treatment in the hospitals?

A.—No. None of them were receiving treatment in the hospitals.

Q.—All right. Now it has been testified here that the first medical director was Dr. Henry Rolf Brown. Did you participate in his selection?

A.—I participated in his selection as a member of the board of trustees.

Q.—Yes. Now, what other doctors had been engaged for the medical staff when you became president in January 1938?

A.—Dr. Raymond E. Selders; Dr. Stephen Hulburt; Dr. Cahoon; Dr. Halstead.

Q.—I wonder if you are correct there. Dr. Cahoon, did he come to that staff that early, when you became president?

A.—I will have to withdraw that. He became later on. Dr. Scandiffo; Dr. Richardson.

Q.—And had you had any other doctors who had joined you and then had resigned?

A.—Yes. Dr. Lee was a member of the staff at the time and had resigned.

Q.—That is Dr. Allan E. Lee?

A.—Dr. Allan E. Lee.

Q.—I wonder if you could tell us what compensations were being made these doctors who were on the staff, the doctors you have named.

A.—As near as I can recall, Mr. Lewin, compensation ranged from \$2,000 per annum for part-time service to \$7,200 per annum for full-time services.

Q.—Yes. Now, who drew the \$7,200?

A.—The director, Dr. Brown.

Q.—And who were the part-time men?

A.—Dr. Scandiffo was a part-time man. I think Dr. Lee, when he first came there, was a part-time man.

Q.—What was the arrangement with Dr. Richardson?

A.—Dr. Richardson was employed to take care of house calls because there were so many house calls at the time that it disrupted the operations of the clinic to have doctors called out from their work during the day.

Q.—Yes.

A.—So we arranged to have one doctor confine himself to house calls.

Q.—Yes. Mr. Kirkpatrick, who picked out these doctors for employment by Group Health?

A.—The medical director selected every one of them.

Q.—And was it on his recommendation that they were elected to the medical staff?

A.—It was on his recommendation to the board of trustees that they were put on the pay roll.

Q.—Was any change later made in the employment of Dr. Scandiffo?

A.—Yes. He was taken on full time.

Q.—When did that occur?

A.—As near as I can recall, that occurred sometime in the early summer of 1938.

Q.—What salary did he receive when he was employed?

A.—He received \$6,000 when he was put on full time.

Q.—Was there any change made in Dr. Hulburt's employment?

A.—Yes. Dr. Hulburt was increased two or three times. You mean for that particular time?

Q.—What was his initial salary?

A.—I think his initial salary was twenty-four hundred, if I am not mistaken. I may have to be refreshed as to that particular figure.

Q.—I don't suppose there is any objection to that. I have been informed that his initial salary was \$3,600.

A.—That is perhaps so.

Q.—Mr. Kelleher corrects me and says I am wrong about that, that it was \$2,000, and it was raised to thirty-six hundred.

A.—Yes. I think it was nearer twenty-four hundred than thirty-six at the start.

Q.—What arrangement did Group Health Association make for taking care of the examination of the eyes?

A.—Well, we entered into an arrangement with Dr. Moretti, who had an office on Sixteenth Street, under which he would perform the refractions for \$5 each.

Q.—Is that Dr. Frederick A. Moretti?

A.—That is Frederick A. Moretti. At the time that we entered into that arrangement with him I think there were some 150 to 200 eye refractories awaiting attention at the time, and Dr. Moretti worked those down and later on he was given more.

Q.—How long was he with you, would you say?

A.—He was with us approximately six months under the arrangement, until we obtained a permanent eye man.

Q.—Yes. And who was he?

A.—Dr. Virginius Dabney.

Q.—When did you obtain him?

A.—He came on about March or April in 1938.

Q.—During 1938 were there additions to the medical staff from time to time?

A.—Yes, there were.

Q.—About how many members of Group Health did you have at the start?

A.—We had approximately 900.

Q.—Now, will you tell the jury what changes were made in the number of the members of Group Health during the period that you were with them?

A.—Yes. When we started out in November of 1937 we had on the rolls approximately 900 members, all of whom were employees of the Home Owners Loan Corporation. Shortly after the first of the year 1938, we received requests from two or three other government departments to have other employees participate in this Association and in this service. As a result of that request we had a meeting at the clinic with these representatives of these other departments, and the trustees agreed to throw open the list of membership to these particular departments, and later on we increased the representation to some forty-odd bureaus, agencies, and departments of the Government here in Washington.

Q.—What changes were effected in the number of members that you had?

A.—Well, we went from approximately 900 in November 1937 to about 2,500 or 2,600 in March and April 1938.

Q.—Yes. Had the board decided on any limitation of the members?

A.—Yes. We had a limitation, I think it was 3,300, beyond which we felt we could not go safely.

Q.—Why was that limitation put on?

A.—On account of the limited facilities of the clinic.

Q.—Did you ever attain that maximum amount of 3,300?

A.—No, we never did. Not while I was active in the Association.

Q.—Now, when you became president, did you know that Mr. Penniman had been having some correspondence with the Washington private hospitals?

A.—Yes, I was aware of that.

Q.—You were aware of that. Did you do anything further with regard to getting the Group Health doctors admitted to those hospitals?

A.—Yes. Immediately I assumed that office I corresponded with most of the hospitals in the city asking them to advise me of the status—

Q.—I hand you what purports to be your letter to the Superintendent of the Children's Hospital, dated Feb. 2, 1938, and ask you if you sent that letter?

A.—That is a copy of my letter.

Q.—And you say you sent a letter similar to this to some of the other hospitals?

A.—Nine or ten of them; yes, sir.

Q.—This letter is to Miss Mattie M. Gibson, Superintendent of the Children's Hospital, Washington, D. C.?

THE COURT:—Are they all alike?

Mr. Lewin:—Not quite, your Honor. They have some slight variations. There are other letters exactly like that but there are some variations too.

THE COURT:—Where they are substantially alike, couldn't they sort of be grouped, one question and one answer, to save time?

Mr. Lewin:—Yes, I think we can do that to some extent, your Honor. There was one letter that came later that went to all of them.

Mr. Lewin:—Before I read it I should like to read these exhibits that were offered and received in evidence relating to the correspondence of Mr. Penniman to the Children's Hospital that preceded this letter. The first is Exhibit 27, which is a letter from Mr. Penniman, President of Group Health Association, to the Children's Hospital, dated Nov. 8, 1937:

U. S. EXHIBIT 27

"The Group Health Association, Inc., a mutual, voluntary organization, has been created by the employees of the Federal Home Loan Bank Board and its agencies for the purpose of providing themselves and dependent members of their families with medical and surgical care and, when necessary, with hospitalization in recognized hospitals of high standing.

"As the representative of the Group Health Association, I hereby request the Children's Hospital to admit members of the Group Health Association for customary hospital service upon the request of its Medical Director, Dr. Henry Rolf Brown.

"Request is also made to permit Dr. Raymond E. Selders, Surgeon, attached to the staff of the Group Health Association, to attend these patients while hospitalized. For your information, we are attaching hereto a record of Dr. Selders' education, training and experience.

"The Group Health Association will be responsible for the payment of the costs of hospitalization at customary rates, in each case for a period limited to 21 days for any one illness for each patient admitted upon the request of the Medical Director.

"If you desire further information or a conference with us, we shall be glad to have you let us know. Because of the importance of this request, however, an early and favorable reply will be appreciated.

"Very truly yours, William F. Penniman, President."

That is followed by Exhibit 359, which is a letter from Mattie M. Gibson, Superintendent of the Children's Hospital, back to Mr. Penniman, dated Nov. 16, 1937:

U. S. EXHIBIT 359

"Dear Mr. Penniman:

"At a meeting of the Board of Directors of the Children's Hospital, held November 15th, I was authorized to reply to your letter of November 8th, addressed to the Hospital and to Mr. Drayton as President, as follows:

"The Children's Hospital will accept for treatment or hospitalization any patient in need of care, under its charter, rules and regulations.

"This pertains to indigent, semi-indigent, and a very limited number of pay patients—as we have only twenty-seven beds available for pay patients.

"All physicians treating patients while in the hospital must be members of the Medical or Courtesy Staff, appointments to which are made annually by its Board of Directors after individual examination into the qualifications of applicants by regular hospital channels.

"Yours sincerely, Mattie M. Gibson, Superintendent."

Then comes Exhibit No. 360, which is Mr. Penniman's letter back to Miss Gibson, the Superintendent of Children's Hospital, dated Nov. 18, 1937:

U. S. EXHIBIT 360

"My Dear Miss Gibson:

"Please accept our thanks for your very prompt and courteous reply to our letter, addressed to The Children's Hospital, under date of November 8th, in which we requested permission to admit patients who are Members of the Group Health Association, at the request of its Medical Directors, Dr. Henry Rolf Brown, also to permit Dr. Selders, Surgeon, attached to the Staff of the Group Health Association, to attend these patients while hospitalized.

"I note with much pleasure that at the meeting of the Board of Directors of The Children's Hospital, held November 15th, you were authorized to advise that the Children's Hospital will accept for treatment or hospitalization any patient in need of care, under its charter, rules and regulations. I further note that this pertains to indigent, semi-indigent, and a very limited number of pay patients, since there are only 27 beds available for pay patients.

"I want you to know, and may I ask that you convey to your Board of Directors, our appreciation for their favorable action on this request.

"Relative to our request to permit Dr. Raymond E. Selders, Surgeon, attached to the Staff of the Group Health Association, to attend these patients while hospitalized, we note that all physicians treating patients while in the hospital must be members of the Medical or Courtesy Staff, appointments to which are made annually by its Board of

Directors, after individual examination into the qualifications of applicants by regular hospital channels. I assume that the proper procedure would be to have Dr. Selders fill out an application form or questionnaire. If this is the case, would you be good enough to furnish us with the proper form to be used by Dr. Selders in making this application.

"With very kind regards, I am

"Cordially yours, William F. Penniman, President."

That is Nov. 18, 1937.

Here comes another letter from Mr. Penniman to the same superintendent, Dec. 14, 1937:

U. S. EXHIBIT 362

"Dear Miss Gibson:

"You will recall that we wrote to you on November 18th, relative to your letter of November 16th concerning our request to admit patients who are members of the Group Health Association and to permit Dr. Raymond E. Selders, Surgeon, attached to the Staff of the Group Health Association to attend these patients while hospitalized.

"As stated in our letter of November 18th, we note that all physicians treating patients while in the Children's Hospital must be members of the Medical or Courtesy Staff, appointments to which are made annually by the Board of Directors. We also stated that Dr. Selders will gladly fill out an application form for the consideration of the Board.

"As we have not heard further from you we would appreciate knowing what action has been taken thus far on our request. Would you be good enough to favor us with a prompt reply.

"Yours very truly, William F. Penniman, President."

Then comes 363, which is from the Superintendent, Miss Mattie M. Gibson, back to Mr. Penniman, dated Dec. 15, 1937:

U. S. EXHIBIT 363

"Dear Sir:

"I regret this delay in replying to your letter of November 18th, as I was led to believe that the forms had been sent to your office, but due to the quite serious illness of Mrs. Tabb, my secretary, it must have been left undone.

"I am herewith sending these forms for the use of members of your Medical Staff.

"Sincerely yours, Mattie M. Gibson, Superintendent."

Then 364 is a letter from Mr. Penniman back to Miss Gibson. Mr. Kelleher:—As I understand it, the application of Dr. Selders, attached to Government Exhibit 364, should be withdrawn; and we now do so.

Mr. Lewin:—Government's Exhibit 364 from Mr. Penniman to Miss Gibson, Superintendent of Children's Hospital, dated Dec. 18, 1937:

U. S. EXHIBIT 364

"My Dear Miss Gibson:

"I acknowledge with pleasure the receipt of your letter of December 15th.

"Relative to our request to permit Dr. Raymond E. Selders, Surgeon, attached to the Group Health Association, to attend patients who are members of the Group Health Association, while hospitalized in the Children's Hospital, I take pleasure in handing you herewith the application which you forwarded and which has been prepared by Dr. Selders.

"He has asked me to say to you that upon approval of his application, he will be happy to extend to the Children's Hospital the fullest cooperation in all matters where it is felt that he or his services would be useful.

"Pending such investigation as is found to be necessary, some of the hospitals have been good enough to grant permission to Dr. Selders to treat emergency cases, explaining that this is a customary privilege extended to physicians and surgeons who are duly licensed to practice in the District of Columbia. If this temporary courtesy could be extended to Dr. Selders in the interim period, it would be greatly appreciated.

"Thanking you, I am,

"Very sincerely yours, William F. Penniman, President."

Now comes Exhibit 374, which was the letter that Mr. Kirkpatrick just identified. It is dated Feb. 2, 1938. To Miss Mattie M. Gibson, Superintendent, the Children's Hospital:

U. S. EXHIBIT 374

"My dear Miss Gibson:

"This will refer to your letter of Dec. 15, 1937, addressed to Mr. William F. Penniman, and also Mr. Penniman's reply of Dec. 18, 1937, both of which relate to an application of Dr. Raymond E. Selders, a member of the staff of Group Health Association, Inc., for courtesy privileges at The Children's Hospital.

"Inasmuch as this matter is one of great importance to us, we will very much appreciate a prompt reply to this letter indicating what action has been taken in the matter of Dr. Selders' application.

"Very sincerely yours,

"W. C. Kirkpatrick

"President."

By Mr. Lewin:

Q.—Now I hand you what purports to be a letter from Miss Gibson to you, dated Feb. 3, 1938, and ask if you received that in reply to your letter of February 2.

A.—I did.

Mr. Lewin:—Exhibit 375 is a letter from the superintendent of Children's Hospital, Miss Gibson, to Mr. Kirkpatrick, dated Feb. 3, 1938:

U. S. EXHIBIT 375

"Dear Mr. Kirkpatrick:

"This refers to your letter of February 2nd regarding Dr. Selders' application for courtesy privilege at this Hospital.

"As is our custom, we have referred this matter to the Credentials Committee of our Medical Staff and we shall see that you are promptly informed when that Committee has acted upon Dr. Selders' application.

"With all good wishes to you, I am

"Sincerely yours, Mattie M. Gibson, Superintendent."

By Mr. Lewin:

Q.—Now, did you receive any further word or notification from Miss Gibson or the Children's Hospital between that time and July 28, 1938?

A.—I did not.

Q.—Did you write again to the hospital on July 28, 1938?

A.—I did.

Q.—And did you write a similar letter to all of the other hospitals?

A.—I think substantially all of them, if not all of them.

Q.—Yes. Now, I show you what purports to be a copy of your letter dated July 28, 1938, addressed to Mr. Charles D. Drayton, the President of the Board of Trustees of Children's Hospital.

A.—That is a copy of the letter I wrote.

Q.—Yes. And you say the letter which you sent to almost all the others was exactly the same?

A.—I think it was identical.

Q.—What was the purpose of sending this letter, Mr. Kirkpatrick?

Mr. Leahy:—I object. The letter speaks for itself.

Mr. Lewin:—No. Just the purpose.

Mr. Leahy:—That may be.

Mr. Lewin:—Take a look at it, if you care to.

(Mr. Leahy examined paper.)

• This is Government's Exhibit 376, which is a letter from Mr. Kirkpatrick to Mr. Drayton, President of the Board of Trustees of Children's Hospital, dated July 28, 1938:

U. S. EXHIBIT 376

"My dear Mr. Drayton:

"In view of Justice Bailey's decision yesterday establishing the legality of Group Health Association, Inc., it is respectfully requested that Dr. Raymond E. Selders, a member of our staff, be admitted to the courtesy staff of Children's Hospital, and that he may attend members of this Association admitted as patients there.

"We shall appreciate the courtesy of an early reply.

"Very truly yours, W. C. Kirkpatrick, President."

By Mr. Lewin:

Q.—Now, I would like to ask you who is Justice Bailey to whom you refer.

THE COURT:—I will tell you who he is.

Mr. Lewin:—I would like the jury to know.

THE COURT:—I think we all understand he is a member of this Court.

Mr. Lewin:—A member of this Court.

By Mr. Lewin:

Q.—And what was the decision you were referring to?

A.—Decision in declaratory judgment.

Mr. Leahy:—I object. Just the fact.

Mr. Lewin:—That is all we are asking for.

THE WITNESS:—It is in the matter of a declaratory judgment brought by Group Health Association.

By Mr. Lewin:

Q.—When was the suit for declaratory judgment brought by Group Health Association?

A.—In January 1938.

Q.—January 1938. And it was brought before Justice Bailey of this Court?

A.—That's right.

Q.—And do you remember what character of judgment it sought?

A.—To declare whether or not we were a corporation illegally engaged in the practice of medicine and whether we were engaged in the insurance business.

Q.—And was Justice Bailey's decision on that law favorable or unfavorable?

A.—Favorable to our Association in both instances.

Q.—And what was it?

A.—Generally that we were not engaged in any way in the practice of medicine; that we were in no way involved in the business of insurance.

Q.—And was the purpose of that letter to bring that to the attention of these hospitals?

A.—In the light of that decision to again renew our plea for admission of those doctors to those hospitals.

Mr. Lewin:—Government Exhibit 377 is a letter on the letter-head of Charles D. Drayton, dated Aug. 4, 1938, and reads:

U. S. EXHIBIT 377

"My dear Mr. Kirkpatrick:

"Yours of July 28th has been forwarded to me here.

"As soon as our board meets in September I shall take up the question as to what position we should now take respecting Group Health Association, Inc., and advise you on behalf of Children's Hospital. Since the matter is one of great importance and since our position heretofore has resulted from formal action taken by our board, you will understand that I am not able now to announce any change. I trust, therefore, you will allow us sufficient time to reconsider the matter in the light of subsequent developments.

"Very truly yours, Charles D. Drayton,
President, The Children's Hospital."

Now, did you respond to that letter?

A.—Yes, sir.

U. S. EXHIBIT 378

"Dear Mr. Drayton:

"Thank you very much indeed for your letter of Aug. 4, 1938.

"It will be entirely satisfactory to the Association if you will take up at your next Board of Trustees meeting the question of Dr. Selder's admission to the courtesy staff of Children's Hospital.

"Very truly yours, W. C. Kirkpatrick, President."

By Mr. Lewin:

Q.—Now, did you hear anything further from Mr. Drayton and the Children's Hospital between that time and Sept. 16, 1938?

A.—No, sir.

U. S. EXHIBIT 379

"Dear Mr. Drayton:

"On Aug. 4, 1938, in response to my letter of July 28, 1938, you were good enough to advise me that the subject matter of my letter would be referred to your Board of Directors some time in September.

"I shall appreciate it very much if I may be advised by you whether or not your Board has yet had an opportunity to give consideration to the subject matter of my letter of July 28, 1938.

"Very truly yours, W. C. Kirkpatrick, President."

Q.—Did you receive a reply from Mr. Drayton, the President of Children's Hospital (indicating)?

A.—This letter was in response to that last letter.

U. S. EXHIBIT 380

"Dear Mr. Kirkpatrick:

"Replying to yours of September 16th"—

THE COURT:—A little louder, please.

Mr. Lewin (continues reading):

"When I wrote you that The Children's Hospital Board would meet in September, I was under a misapprehension. We have no September meeting, but just as soon as the matter can be given consideration at the October 10th meeting, I will advise you further concerning our position.

"Very truly yours, Charles D. Drayton, President."

By Mr. Lewin:

Q.—Did you receive another letter from Mr. Drayton?

A.—Yes, sir.

U. S. EXHIBIT 381

"Dear Mr. Kirkpatrick:

"I have not been more prompt in replying to your several communications dated July 28 and Aug. 6, 1938, asking that Dr. Raymond E. Selders, a member of your staff, be admitted to the courtesy staff of The Children's Hospital, and that he may attend members of your association admitted as patients there, for the reason that, in view of the several court proceedings now under way involving Group Health Association, Inc., it did not seem possible for us to give any final answer on any aspect of the controversy.

"I believe you have been heretofore furnished with a copy of the memorandum of April 1, 1938, embodying the rule promulgated by our medical staff and adopted by our Board governing admissions to the hospital where an emergency exists and also the attendance upon such children of members of your staff. However, I am enclosing herewith another copy of that memorandum.

"Yours very truly, Charles D. Drayton, President."

By Mr. Lewin:

Q.—Mr. Kirkpatrick, had you received before that time this copy of the memorandum that Mr. Drayton refers to?

A.—No. This is the first time I ever saw that.

Q.—The first time you ever saw it. Now, he talks about several court proceedings now under way. When was the Bailey decision?

A.—Handed down July 27, 1938.

Q.—What court proceedings was he referring to in this letter? Were there any court proceedings?

A.—I don't know of any other court proceedings at the time of that letter.

Q.—Did you know anything about a bill in equity being filed by certain members of the District Medical Society in August 1938?

A.—There was a bill. I don't know what you call a bill in equity but there was some legal action brought by three members of the Medical Society, Ruff and Titus, and I have forgotten the other's name.

Q.—Prentiss Willson. A defendant in this case?

A.—If he is a defendant in this case?

Q.—Could you tell us what the nature of that suit was?

A.—If I understand it, it was a suit to enjoin us from operating.

Q.—And it was filed after the decision of Justice Bailey. This is in August. Can you state what the general grounds were for enjoining you?

A.—I think they were substantially the same grounds that were involved in the suit for declaratory judgment, namely, that we were a corporation illegally engaged in the practice of medicine and that we were in the insurance business.

Q.—Can you think of any other court proceedings that were pending at that time when this letter of Nov. 2, 1938, was written?

A.—Well, I think the grand jury proceedings.

Q.—Grand jury proceedings?

A.—Yes.

Q.—Can you think of any others?

A.—The one we just referred to, the three doctors.

THE COURT:—What date is the indictment?

Mr. Lewin:—The date of the indictment is Dec. 20, 1938. That is over a month after this letter was written.

The Witness:—You asked me if I knew what he was referring to. I don't know what he was referring to but I know what was going on.

By Mr. Lewin:

Q.—Were the Group Health doctors ever admitted to the Children's Hospital during the period in which you were president?

A.—No, sir.

Q.—That is, down to the date in the indictment, Dec. 20, 1938, they were not admitted?

A.—No, sir.

Q.—And the letter I have just read you from Mr. Drayton is the last communication you received from them?

A.—That is correct.

(Mr. Lewin then took the witness over a similar series of letters covering correspondence with Columbia Hospital and Dr. Percy M. Ashburn.)

(The attorney, Mr. Lewin, then took the witness over the correspondence with Emergency Hospital and Mr. Gist Blair and Mr. B. B. Sandidge.)

The correspondence indicated that Emergency Hospital had refused Dr. Selders a place on its staff and had stated patients could be admitted only for doctors on the staff. A conference was held between Major Blair, Dr. Mitchell, Mr. Sandidge, Mr. Horace Russell and Mr. Kirkpatrick.

Next came similar correspondence between Penniman and Kirkpatrick and the Episcopal Eye, Ear and Throat Hospital represented by Henry P. Blair.

Admission to the courtesy staff had been requested for Dr. Virginius Dabney.

By Mr. Lewin:

Q.—Did you receive any reply or replies from the Episcopal Hospital from Mr. Blair to either of your letters, dated July 28, 1938, or Sept. 16, 1938?

A.—No, sir, never did.

Q.—You had no further word from them down to the date of the indictment?

A.—No, sir.

Q.—Let me ask you this: In the spring of 1938 were any of the Group Health patients—or let us put it this way: Were any persons, members of Group Health Association, actually treated at the Episcopal Eye, Ear and Throat Hospital?

A.—Yes, some 50 or 60 of them.

Q.—Who treated them?

A.—Dr. Dabney.

Q.—What was the arrangement?

A.—The arrangement was that Dr. Dabney took these patients in, you might say, through the back door.

Mr. Leahy:—I object to the characterization by the witness. I move to strike his answer.

THE COURT:—Yes, it is a characterization; it will be stricken.

By Mr. Lewin:

Q.—Well, how did he take them in?

A.—Took them in as his own private patients without reference to Group Health.

Mr. Leahy:—I object to that; that must be based on hearsay.

Mr. Lewin:—It is not hearsay; it is within the knowledge of the witness.

Mr. Leahy:—The fact that Dr. Dabney may or may not have treated these persons as his private patients at the Episcopal Hospital could be nothing else than hearsay, and I move to strike the answer.

Mr. Lewin:—No, it is not hearsay. You might just as well say that to all of this. The best evidence rule applies to documents; it has no application to oral testimony within the knowledge of the witness.

THE COURT:—I sustain the objection. Unless this gentleman was here how could he know?

Mr. Lewin:—He knew because this line of correspondence shows he was head over heels engaged in this controversy personally.

THE COURT:—If you can indicate how he could have had any personal knowledge of this matter, all right; otherwise it would be hearsay.

Then came correspondence between Penniman and Kirkpatrick with Dr. W. A. Bloedorn, Medical Director, George Washington University Hospital, in which Dr. Selders had been refused hospital privileges.

Attempts had also been made to secure courtesy staff privileges at the Eastern Dispensary and Casualty Hospital.

A conference was held between Mr. Kirkpatrick, Mr. Ormand Loomis, executive assistant of the Home Owners' Loan Board, who was secretary to Mr. Fahey; Mr. Baker, its treasurer, and another director with Mr. Rogers, the superintendent of the hospital, and Dr. Richard Young, chief of the medical staff. They discussed admission of members of the staff to the courtesy staff at the Casualty Hospital.

The letters indicated that the hospital had referred the matter to the medical staff and thereafter had failed to appoint Dr. Selders. There followed correspondence with Dr. Lewis H. Taylor, President, Sibley Memorial Hospital.

FEBRUARY 24, AFTERNOON

On Feb. 24, 1938:

U. S. EXHIBIT 412

"My dear Doctor Selders:

"Your application for Medical, Major and Minor Surgical, and Major Gynecological privileges in Sibley Memorial Hospital were, at your request, again submitted to the Executive Committee of the Medical Council of Sibley Memorial Hospital for reconsideration of their action in refusing the same.

"I regret to inform you that the Committee did not reverse its action and your request has been refused.

"Very sincerely yours,
Lewis H. Taylor, M.D.

"President, Sibley Memorial Hospital."

Next came correspondence with Mr. Eisenman, secretary and Mr. Aspinwall, president of Garfield Memorial Hospital.

A conference had been held between Mr. Kirkpatrick, Mr. Aspinwall, Mr. Ormand Loomis and Mr. Louis Reed of the Social Security Board. The final letter indicated the Staff of the Hospital had made no recommendation relative to the appointment of Dr. Selders to the Courtesy Staff.

Then came correspondence with the Very Reverend Arthur A. O'Leary, S. J., President, Georgetown University.

Government's Exhibit 442 is Father O'Leary's response dated Oct. 11, 1938:

U. S. EXHIBIT 442

"Dear Mr. Kirkpatrick:

"In reply to your letter of Sept. 16th, 1938, I wish to state that at the meeting of the Executive Staff of Georgetown University Hospital, held yesterday, it was the decision of the Staff that no change should be made in the case of the refusal to admit Dr. Raymond E. Selders to the Courtesy Staff of Georgetown University Hospital.

"Dr. Selders was informed on March 4, 1938, by Dr. Fred O. Coe, Secretary of the Executive Staff, that his application to treat minor surgical, major surgical and gynecological cases at the hospital had been rejected.

"Very truly yours,
"Arthur A. O'Leary, S.J., President."

Next were letters to Dr. J. Gregg Custis, executive officer, Board of Trustees and Fred McGee, president of the Board of Trustees of National Homeopathic Hospital.

The government then presented correspondence between W. C. Kirkpatrick and H. E. Rice, credit manager, Washington Sanitarium and Hospital, Takoma Park, Washington, D. C.; Robert A. Hare, M.D., and W. C. Kirkpatrick.

There were also letters from Mr. Kirkpatrick to Dr. Caylor, the secretary of Providence Hospital.

And another from Mr. Kirkpatrick to Sister Rosa, the acting president of the board of trustees of Providence Hospital.

Mr. Kirkpatrick testified in reply to questions that he and Mr. Ivan Carson, a trustee of G. H. A., Inc., had called on Mr. Rice, credit manager of the Washington Sanitarium and Hospital at Takoma Park, Maryland.

Q.—Do you know why application had not been made to that hospital before that time?

A.—Well, that hospital is located just outside of the District of Columbia, and we felt somewhat impelled to use the hospitals in the city before we went elsewhere.

There followed discussion between attorneys on admissibility of evidence.

By Mr. Lewin:

Q.—Mr. Kirkpatrick, by December 20, 1938, when this indictment was returned, what was the situation with regard to the hospitalization of Group Health Association patients? How many at that time were awaiting hospitalization and elective surgical operations?

A.—About that time the number was in the neighborhood of forty-five.

Q.—And, now, what had happened during 1938 to account for the difference between the number that was waiting when you assumed office at the beginning of the year and this lesser number awaiting in December?

A.—Well, as these were all elective cases, some of them concluded, along with their physician, that they could postpone—

Mr. Leahy:—I object; that would be pure hearsay, if your Honor please.

Mr. Lewin:—I don't think it is hearsay.

THE COURT:—Well, I think he may say it was postponed, if that is a fact, without stating the conclusions of others or himself about it.

THE WITNESS:—The operations were postponed, and in other cases they resorted to outside physicians to have the operations performed.

Q.—And how were those doctors compensated; do you know?

By Mr. Lewin:

Q.—Now, who compensated those outside doctors who were not on the staff of Group Health Association, who performed these operations on Group Health members during '38?

A.—Group Health Association compensated them.

Q.—So that was an additional expense for medical service to the salaries that you paid your regular staff?

A.—It was.

Q.—And why was it necessary for them to seek these outside doctors?

Mr. Leahy:—I object, if your Honor please.

THE WITNESS:—Because the hospitals would not admit our physicians.

Mr. Leahy:—Wait just a minute.

THE COURT:—I thought you said—

Mr. Leahy:—I don't think it is competent, if your Honor please.

Mr. Burke:—Argumentative. The question starts with "why." It is an argumentative question.

Mr. Lewin:—All questions starting with "why" are banned?

THE COURT:—What was the question, Mr. Lewin?

Mr. Lewin:—I want to know why it was necessary for these members of Group Health to seek these outside doctors.

Mr. Leahy:—How would he know except from hearsay?

Mr. Lewin:—Oh, mercy! Hearsay! You are overworking that.

Mr. Leahy:—I don't think so, if your Honor please.

THE COURT:—I think it is in the form of a conclusion, isn't it?

Mr. Lewin:—He paid the bills for all those.

Mr. Leahy:—It does not answer the question.

THE COURT:—I am agreeing with you absolutely.

Mr. Lewin:—You agree with me?

THE COURT:—Except that I think he should state why he paid them, why it was necessary for him to employ them and pay them.

Mr. Lewin:—That is what I wanted to know. According to Mr. Burke's idea any question beginning with "Why" is bad.

THE COURT:—You sometimes misconstrue my remarks. I am with you.

Mr. Lewin:—I am so pleasantly surprised, your Honor.

By Mr. Lewin:

Q.—Now, Mr. Kirkpatrick, tell us—

The Witness:—May I have the question repeated, please?

Mr. Lewin:—Gracious, I am afraid to do it.

Mr. Leahy:—Go ahead; ask it again.

THE COURT:—Let me put the question; then there will be no objection to it.

Mr. Richardson:—I am not so sure about that.

BY THE COURT:

Q.—What was your reason for compensating these doctors?

A.—Well, primarily because they presented us a bill for their services.

Q.—Well, what was your current obligation?

A.—Well, these members of Group Health Association were entitled to receive this service, and if we couldn't supply it with our own staff we felt obligated to supply it elsewhere.

THE COURT:—I think that covers it.

By Mr. Lewin:

Q.—Why couldn't you supply it with your own staff?

A.—For the reason that our own staff was not admitted to the hospitals to perform the operations that were needed.

Q.—Yes, sir. All right.

Now, I shall show you Government's Exhibit 458 and ask you if that is a copy of your letter to the defendant Thomas E. Neill, president of the Medical Society of the District of Columbia, dated March 21, 1938.

A.—It is.

Q.—I show you Government's Exhibit 459 and ask you if that is the defendant Neill's response to you, dated March 22, 1938.

A.—That is the response to that letter.

Q.—I show you Government's Exhibit 460 and ask you if that is a letter which you received from the defendant Neill, dated April 11, 1938.

A.—It is.

Q.—And I show you Government's Exhibit 461 and ask you whether that is a copy of your reply to Dr. Neill, dated April 19, 1938.

A.—That is a copy of my reply.

Mr. Lewin:—Yes. I offer those letters in evidence.

Here followed discussion of admissibility of evidence consisting of letters between G. H. A., Inc., and the hospitals. The letters were written by R. T. Berry, secretary of G. H. A., Inc.

(Handing letters to Mr. Leahy.)

(Letters heretofore marked Government's Exhibits 458 through 461, inclusive, for identification, were offered in evidence.)

FEBRUARY 25

THE COURT:—Members of the jury: One of our alternate jurors is absent. We have a report that he is quite sick. I haven't yet any report as to exactly what his illness is, but I am informed it is something in the nature of an acute cold or influenza. I have taken the matter up with the attorneys and they have reached the understanding that they will let the matter go over until tomorrow.

FEBRUARY 26—MORNING

(The trial proceeded in the absence of the alternate juror who was ill.)

Mr. Lewin:—May it please the Court, I should like to begin this morning with the reading of two exhibits which have been received in evidence:

EXHIBIT 458

Mr. Lewin:—Exhibit 458 is a letter from Mr. Kirkpatrick, president of Group Health Association, Inc., to the defendant Thomas E. Neill, president of the Medical Society of the District of Columbia, dated March 21, 1938:

"Dear Dr. Neill:

"A situation arose yesterday, March 20, in regard to a member of Group Health Association who is seriously ill with coronary thrombosis, which gives us the gravest concern for the welfare of 2,500 members of our Association and their 3,500 dependents. If the instructions you are reported to have issued to a distinguished physician in good standing with the Medical Society of the District of Columbia are correctly reported to us, your action not only discredits the medical profession as a whole but would violate every humane precept that has been the cornerstone of the practice of medicine since the time of Hippocrates.

"The facts as reported to me in my official capacity as President of Group Health Association are these:

"Dr. Richard H. Price, a member of the Group Health medical staff, has been attending a patient, a member of Group Health Association who has been suffering from a serious heart affliction known as coronary thrombosis. His condition reached such a serious stage yesterday that Dr. Price wished to call into consultation on the case a heart specialist of repute, who is a member of your Society. Dr. Price reports he was informed by this physician that he had been advised by you that he would not be permitted to enter into such a consultation. Dr. Price reports him as saying in effect that you

had ruled no member of the Medical Society of the District of Columbia could consult with a physician on the staff of G. H. A.; that he could not visit a member of ours or render any service in the presence of a Group Health physician, regardless of the critical nature of the case; that any contact or 'consultation' between this physician and a staff physician of Group Health would have to be confined to formal notes or conversation on the telephone.

"Dr. Price concurred with me that every concession should be made in order to obtain the services of this heart specialist for this patient and such arrangements were immediately concluded. Dr. Price informs me that the physician was both sympathetic and willing to give his services in any form consistent with the rules of the Medical Society of the District of Columbia. We appreciate his attitude and are happy to have obtained his services in view of the critical nature of the patient's illness.

"I feel sure that a gross misunderstanding has taken place as it is inconceivable that you, as President of the District Society, would take such an autocratic stand in committing the medical profession to an inhumane policy. If true, your leadership of the Medical Society has not only barred GHA physicians from their right to administer to human needs in the hospitals of Washington but from their right and their duty to avail themselves of the benefits of consultation with other leaders of the Medical profession in administering to their patients.

"It is vitally important that we have a clear understanding of your position in the matter immediately. I, therefore, await word from you.

"Your very truly,

"W. C. Kirkpatrick,

"President."

U. S. EXHIBIT 459

Mr. Lewin:—I will now read Government Exhibit 459, which is Dr. Neill's response to Mr. Kirkpatrick's letter, which is dated March 22, 1938, written on the letterhead of The Medical Society of the District of Columbia:

"My dear Mr. Kirkpatrick:

"I acknowledge your letter of March 21st in which you refer to the occasion when Dr. Richard H. Price, a member of the medical staff of the Group Health Association is said to have endeavored to enlist the services of a member of the Medical Society of the District of Columbia as a consultant in connection with the treatment of a member of your Association.

"In view of the statements contained in your letter, and the wide publicity given to it in the public press, it is obvious that the primary purpose of your communication is to create in the public mind an erroneous impression as to the attitude of the Medical Society of the District of Columbia and the members thereof in rendering medical aid to the community in general.

"In order to have a proper appreciation of the questions involved it is first necessary to have a correct understanding of the facts. In the case referred to by you, it is my understanding that the services of the consultant in question were solicited by a member of the family of the patient because of the fact that on a prior occasion he had treated a member of the family of the patient for a like ailment. When it developed that the patient was being treated by Dr. Richard H. Price, a member of the staff of the Group Health Association, the consultant sought my advice as to whether it was permissible under the Constitution of the Society for him to enter into consultation with a member of your medical staff. Having in mind the Constitution of the Medical Society, which provides that:

'No member of the Society shall engage in any professional capacity whatsoever with any organization, group or individual, by whatever name called or however organized, engaged in the practice of medicine within the District of Columbia or within ten miles thereof, which has not been approved by the Society.'

and considering the fact that the Group Health Association has not been approved by the Medical Society, I advised the consultant that under the provisions of the Constitution of the Society, he was not authorized to enter into consultation with Dr. Price.

"I am advised that the consultant informed Doctor Price that while he could not see the patient in consultation, nevertheless, he would gladly see the patient independently and render whatever medical service might be needed. Agreeable to the wishes of the patient, the consultant called upon him, made a diagnosis and gave advice as to treatment, all of which was communicated to Doctor Price.

"A frank and fair disclosure of the facts clearly indicates that the best interests of the patient were in every respect safeguarded, and in no wise did he suffer any detriment.

"The Group Health Association is engaged in the practice of medicine in the District of Columbia in violation of the provisions of the Act of Congress known as the 'Healing Arts Practice Act,' in force in this District, which is a comprehensive act for the government, regulation and control of the practice of medicine. Because of the fact that the Group Health Association is illegally engaged in the practice of medicine, it has not, and cannot, be approved by the Medical Society as a proper organization to engage in the practice of medicine in this District.

"Notwithstanding the fact that the United States District Attorney has ruled that the Group Health Association is engaged in the practice of medicine in violation of law, nevertheless, it has persisted in the continuance of this illegal practice. The Constitution of the Medical Society is binding upon its members, and as President of the Society, I am obligated, when called upon, to advise the members of the Society that the provisions of its Constitution are mandatory and must be adhered to.

"I have no discretion to suspend the provisions of the Constitution of the Society, and so long as the Group Health Association persists in the practice of medicine in violation of law, it is my bounden duty to advise the members of the Society that under its Constitution they are not authorized to enter into consultation with the hired agents of the Group Health Association.

"In conclusion, I desire to emphasize that this does not mean that the members of the Group Health Association, or any other members of the community, will be deprived of proper medical attention. On the contrary, the members of the Medical Society stand ready at all times to render necessary and proper medical attention to all persons in the community, including the members of the Group Health Association.

"Very truly yours,
"Thomas E. Neill
"Thomas E. Neill, M.D., President,
"The Medical Society of the District of Columbia."

U. S. EXHIBIT 322

Mr. Kelleher:

"Report of Hospital Committee Submitted Nov. 11, 1937:
"In view of the resolution adopted by The Medical Society of the District of Columbia on the evening of Nov. 3, 1937, the Hospital Committee held a meeting, at my office, on the evening of Nov. 9, 1937 and recommends that the Medical Society of The District of Columbia send the following resolution to the medical boards of the various local hospitals for interpretation to the Boards of Directors of those hospitals:

"That the hospitals accept patients from Group Health Association, Inc., provided that Group Health Association, Inc., is responsible for their financial obligations; that these patients only be treated by the attending, associate, assistant and courtesy staff physicians of the respective local hospitals.

"J. Ogle Warfield Jr.
"Chairman, Hospital Committee."

Mr. Kelleher:—At the bottom is a handwritten note which reads as follows:

"The Med. Soc. of D. C. voted on Nov. 11, 1937 to recommit their report to the Hospital Committee for further consideration."

U. S. EXHIBIT 323

Mr. Kelleher:—Exhibit 323 is written on the letterhead of Dr. J. Ogle Warfield Jr. This is headed "Report of the Hospital Committee, Dec. 1, 1937":

"The Hospital Committee submits the following resolution:
"Resolved, That as a matter of educational policy the Medical Society of D. C. strongly recommends that all hospitals engaged in the teaching and training of residents, interns, and nurses, where possible, follow the recommendation of The American Medical Association regarding the constitution of their entire Medical Staffs, namely, that each appointee be a member of the Medical Society of D. C. or a local Medical Society in this immediate neighborhood and a member of American Medical Association.

"Mr. President, I move that this resolution be adopted and a copy of it be sent to each of the local hospitals.

"J. Ogle Warfield Jr.
"Chairman, Hospital Committee."

U. S. EXHIBIT 83

Mr. Kelleher:—Exhibit 83 is an original letter from the defendant C. B. Conklin, Secretary, The Medical Society of the District of Columbia to Dr. J. Ogle Warfield Jr., Chairman, Committee on Hospitals, The Medical Society of the District of Columbia, Washington, D. C., dated Feb. 25, 1938:

"Dear Doctor Warfield:

"Pursuant to action of the Executive Committee, in session on the evening of Feb. 21, 1938, the enclosed resolution, which was presented to the Society at the Business Meeting in February, was ordered referred to the Hospital Committee for consideration and report.

"Very truly yours,
"C. B. Conklin, M.D.,
"Secretary."

Mr. Kelleher:—And the enclosed resolution is as follows:

"Resolution presented at the Business Meeting of the Medical Society of the District of Columbia, in session on Feb. 2, 1938, by Dr. Thomas P. Mattingly; ordered referred to the Executive Committee for consideration and report.

"That the proper agency of the Medical Society be instructed to present at our next stated meeting the facts relating to the present status of Group Health physicians at the various Washington hospitals preliminary to appropriate disciplinary action, in event any hospital has ignored the Medical Society's wishes in the premises."

U. S. EXHIBIT 313

Mr. Kelleher:—Exhibit 313 is an original letter from the defendant Dr. Warfield:

"Feb. 3, 1938.

"Dr. W. Warren Sager,
1835 Eye Street N.W.,
Washington, D. C.

"Dear Dr. Sager:

"I would appreciate your inquiring of your hospital which you represent on the Hospital Committee whether any action has been taken on the names or applications of physicians or surgeons connected with Group Health Association, Inc., also has your hospital recently revised its lists of courtesy and staff physicians and surgeons?

"Sincerely,
"J. Ogle Warfield Jr.
"Chairman, Hospital Committee."

U. S. EXHIBIT 312

Mr. Kelleher:—Exhibit 312 is headed "Committee on Hospitals"—the testimony is that a letter similar to Exhibit 313 went to all of the members of the hospital committee, listed on Exhibit 312, and their names are as follows:

"Committee on Hospitals
"1937-38
"(Garfield) Chairman: J. Ogle Warfield Jr.
"Childrens—1726 Eye Street N.W., Washington, D. C.
"Georgetown—Leon A. Martel, 1801 Eye Street, N.W. Na. 7200.
"Episcopal—William H. Jenkins, The Connecticut Apts. Di. 3200.
"Homeopathic—Gregg C. Birdsall, 1832 Kalorama Rd. N.W., Co. 3350.
"Casualty—J. Rogers Young, 1400 M Street, N.W., Met. 2419.
"Emergency—William B. Marbury, 2238 Q Street, N.W. No. 8600.
"Columbia—Jerome F. Crowley, The Connecticut Apts., Di. 3200.
"Providence—J. P. Shearer, Farragut Medical Bldg., Di. 5870.
"G. Washington—W. Warren Sager, 1835 Eye Street, N.W., Na. 7200.
"John H. Trinder, 1746 K Street, N.W., Di. 4620.
"Sibley—Jessie T. Mann, 1024 Mass. Ave., N.E., Li. 6440.
"Counsel for Medical Society of D. C.—
"Frederick A. Fenning, 940 Shoreham Building, Washington, D. C.
Phone: National 1194.
"President of Medical Society of D. C.—
"Dr. Thomas E. Neill, 1824 Mass. Ave., N.W. Phone: Decatur 1707 or
"2810 35th Street, N.W. Phone: Cleveland 0026."

Mr. Kelleher:—Exhibits 314 through 321 are replies which the defendant Dr. Warfield received in response to letters sent to members of the committee.

U. S. EXHIBIT 321

Mr. Kelleher:—Exhibit 321 is written on the letterhead of Earle G. Breeding. It is dated Feb. 8, 1938, and addressed to Dr. John H. Trinder, The Parkwood, 1746 K Street N.W., Washington, D. C.:

"Dear Doctor:

"Referring to the enclosed inquiry of Dr. Warfield, I wish to advise there have been no applications of physicians or surgeons connected with the Group Health Association, Inc., for the courtesy of the Episcopal Hospital to date.

"The Hospital has recently revised its courtesy list and this list may be obtained by applying to the Superintendent of the Hospital if your committee requests it.

"If any further information is required, I will be glad to give it to you or you may obtain same from the acting Superintendent.

"Very sincerely,
"Earle G. Breeding, M.D."

U. S. EXHIBIT 320

Mr. Kelleher:—Exhibit 320 is a letter dated Feb. 4, 1938, under the letterhead of Columbia Hospital for Women, signed by P. M. Ashburn, Superintendent, addressed to Dr. J. Ogle Warfield Jr., 1726 Eye Street N.W., Washington, D. C.

It reads:

"My dear Doctor Warfield:

"Dr. Jerome F. Crowley has asked me if I would give you the information which you request in your letter to him dated February 3, and I take pleasure in doing so.

"This hospital has not as yet taken any action on the application of any physician or surgeon connected with the Group Health Association.

"This hospital has not recently revised its list of courtesy and staff physicians and surgeons.

"Very truly yours,
"P. M. Ashburn,
"Superintendent."

U. S. EXHIBIT 319

Mr. Kelleher:—Exhibit 319 is an original letter under the letterhead of the National Homeopathic Hospital, Washington, D. C., from Frances Whitlock Hall, Superintendent of that hospital, to Dr. J. Ogle Warfield Jr., Chairman, Hospital Committee, 1726 Eye Street N.W., Washington, D. C.

"My dear Dr. Warfield:

"In compliance with your request to Dr. Birdsall, I am enclosing copies of the two letters, one of which is being sent to every member of our Courtesy Staff of 1937.

"I am also enclosing copy of a letter sent to Mr. Penniman under date of Nov. 9, 1937.

"I believe the letters are self-explanatory in showing that the hospital has recently revised its list of courtesy and staff physicians and surgeons, excluding those who are not members of an organized Medical Society.

"Sincerely,
"Frances Whitlock Hall,
"Superintendent."

U. S. EXHIBIT 318

Mr. Kelleher:—It is Exhibit 318, dated March 18, 1938. It is under the letterhead of National Homeopathic Hospital, Washington, D. C. It reads as follows:

"The Trustees of the National Homeopathic Hospital are revising the Courtesy Staff for 1938. We wish to add your name to the Staff but find that the Medical Society of the District of Columbia does not list your name among its members.

"The rules of the Hospital governing staff members requires membership in a local medical society of the District of Columbia, nearby Maryland, or Virginia.

"Will you kindly advise me if you belong to any of the medical societies, at your earliest convenience.

"Yours very truly,"

U. S. EXHIBIT 317

Mr. Kelleher:—Exhibit 317 is a letter under the letterhead of National Homeopathic Hospital, from Fred McKee, to the defendant Dr. J. O. Warfield, Chairman of American Medical Association Committee, 1726 Eye Street N.W., Washington, D. C.:

"Dear Dr. Warfield:

"I am enclosing you herewith for your files, copy of letter written to each member of our Courtesy Staff, and also a copy of letter that has been written to those who we found were on the list, but were not members of any medical association.

"Your very truly,

"Fred McKee

"President,

"Board of Trustees."

U. S. EXHIBIT 316

Mr. Kelleher:—Exhibit 316 is a handwritten letter from G. C. Birdsall, M.D., 1832 Kalorama Road, Washington, D. C., dated Feb. 10, 1938:

"Dear Doctor:

"The National Homeo. Hospital met all requirements when appointing staff and courtesy staff. I asked the superintendent to mail you copies of the letters which were mailed out. All members were required to be affiliated with organized medical society either in the District or surrounding adjacent counties. A few of the younger men were given to May to affiliate themselves with their medical society before their applications could be accepted.

"Very truly,

"G. C. Birdsall."

U. S. EXHIBIT 315

Mr. Kelleher:—Exhibit 315 is a letter from Dr. William B. Marbury to the defendant Dr. J. Ogle Warfield Jr., 1726 Eye Street N.W., Washington, D. C., dated Feb. 9, 1938.

"Dear Dr. Warfield:

"I have your letter of February 3rd. I have inquired at Emergency Hospital whether or not there has been any change in the situation in regard to the Group Health Association, and also whether there has been any revision of the courtesy list and staff appointments. Apparently the hospital has not taken any new action in regard to physicians of the Group Health Association, Inc. They cannot treat patients at Emergency Hospital because they do not belong to the D. C. Medical Society.

"The notices in regard to the courtesy list and staff physicians go out in April. There have been no recent changes in any of these appointments. I hope this gives you the information desired.

"Very sincerely yours,

"William B. Marbury."

U. S. EXHIBIT 314

Mr. Kelleher:—Exhibit 314 is an original letter from the defendant J. Rogers Young to the defendant J. Ogle Warfield Jr., dated Feb. 9, 1938:

"Dear Dr. Warfield:

"In response to your inquiry of February 3, I wish to inform you that the Eastern Dispensary and Casualty Hospital is at this time revising its lists of courtesy and staff physicians and surgeons. To date we have had no application from any physician or surgeon connected with the Group Health Association.

"If there is any further information I can give you regarding this matter, I shall be glad to cooperate with you in any way.

"Very truly yours,

"J. Rogers Young."

U. S. EXHIBIT 296

Mr. Kelleher:—Exhibit 296 is a questionnaire which was addressed to all the hospitals in Washington. 296, which was filled out and returned by the National Homeopathic Hospital.

"1. What communication has your hospital had from Group Health Association, Inc.?"

Answer (in pen handwriting): "Received circular letter dated November 8."

"2. What reply has your hospital made to Group Health Association, Inc.?"

"No action would be taken until Group Health Assoc. was approved by D. C. Med. Soc.

"3. Which, if any of the following Doctors are now members of your Medical Staff in any capacity or have privileges to practice in your hospital?"

"Dr. Henry Rolf Brown. No.

"Dr. Allan E. Lee. Yes.

"Dr. Mario Scandiffo. Yes.

"Dr. R. Stephen Hulburt. No.

"Dr. Raymond E. Selders. No.

"Dr. Edmond B. Wells. No."

In handwriting is the following note:

"Courtesy staff: Lee, obstetrics; Scandiffo, pediatrics; both have had patients in hospital formerly. Further action regarding them awaits the action taken by D. C. Med. Society."

Next question:

"4. Is your hospital in sympathy with the policies of The Medical Society of D. C.?"

"Yes—one hundred per cent.

"5. Is the entire Medical Staff of your hospital reappointed annually?"

"Yes.

"6. Are appointments to the Medical Staff of your hospital approved by the Medical Staff?"

"Yes.

"7. What governing body of your hospital finally makes appointments to the Medical Staff?"

"Board of Trustees.

"8. Does your hospital require membership in the Medical Society of D. C. as a qualification for appointments to its Medical Staff?"

"Yes—Required since Jan. 1, 1937.

"9. What percentage of the entire medical staff of your hospital are members of the Medical Society of D. C.?"

"One hundred per cent—not all of courtesy staff.

"10. Does your hospital require membership in the A. M. A. as a qualification for appointment to its Medical Staff?"

"Only through membership in D. C. Med. Soc.

"11. What percentage of the entire Medical Staff of your hospital are members of the A. M. A.?"

"One hundred per cent.

"12. Is your hospital a beneficiary of Community Chest funds?"

"Yes.

"13. Will you kindly make any other inquiry that you think might be pertinent at this time?"

"The Hospital wants to co-operate with D. C. Med. Soc.—Would like advice about course to pursue regarding applications from patients holding Group Health Assoc. Also regarding consultations in such cases.

"Frances Whitlock Hall,

"Superintendent."

"G. C. Birdsall—

"For Hospital Committee"

U. S. EXHIBIT 311

Mr. Kelleher:—Exhibit 311 is a handwritten memorandum, which has been identified as being in the handwriting of the defendant Warfield. At the top of one column is the word "Doctors"; at the top of the other is "Require membership in D. C. Medical Society," and listed on the left-hand column are the names of the Washington, D. C., hospitals.

"Georgetown—Doctor. None.

"Require membership in D. C. Medical Society. Yes.

"Episcopal—Doctor. None.

There is no answer to the question in the second column.

"Homeopathic." The name Scandiffo is stricken out and also the zero is stricken, in pen.

"Require membership in D. C. Medical Society. Yes.

The next is:

"Casualty—Doctor. None.

"Require membership in D. C. Medical Society.

"Qualified for membership in local Society."

"Emergency—Doctor. None.

"Require membership in D. C. Medical Society. Yes.

"Columbia—Doctor. None.

"Require membership in D. C. Medical Society. No.

"Providence—Doctor. None.

"Require membership in D. C. Medical Society. Yes.

"George Washington—Doctor. None.

"Require membership in D. C. Medical Society. No.

"Sibley—Doctor. Scandiffo.

"Require membership in D. C. Medical Society. No.

"Garfield—Doctor. None.

"Require membership in D. C. Medical Society. Yes.

"Childrens—Doctor. None.

"Require membership in D. C. Medical Society. Yes."

Exhibit 324 is offered only as against the defendant Warfield.

U. S. EXHIBIT 324

"Report of the Hospital Committee submitted to the Executive Committee of the Medical Society of the District of Columbia on March 28, 1938, and to Medical Society April 6, 1938.

"The Hospital Committee has purposely avoided the submission of a list of local hospitals for approval of the Medical Society. The eleven local hospitals therefore remain approved by the Medical Society as of Nov. 4, 1936. To have attempted to re-approve these hospitals last fall or this winter would have detrimentally created conflicts between the Medical Society and some of the local hospitals because of attempted enforcement of the provisions of Chapter IX, Article IV, Section five of the Constitution of the Medical Society."

Mr. Kelleher:—The first sentence of the second paragraph, or a portion thereof, is stricken, and inserted in handwriting of defendant Warfield are certain words. I will first read the sentence as it was originally and then the sentence as changed by Dr. Warfield.

"In an effort to hinder the operation of Group Health Association, Inc. in the local private hospitals, the Medical Society adopted a resolution on Nov. 3, 1937."

The sentence as changed reads as follows:

"In an effort to maintain the high standards of practice in the local private hospitals, the Medical Society adopted a resolution on Nov. 3, 1937 directing the Hospital Committee to recommend the best way of bringing the questions involved to the attention of the Medical boards and boards of directors of the various local hospitals to insure the maximum amount of accomplishment with the minimum amount of friction and conflict. On Dec. 1, 1937 the Hospital Committee submitted a resolution, which was adopted, that the Medical Society recommend to the hospitals that they follow the recommendation of the American Medical Association, namely that each hospital appointee be a member of his or her local medical society and a member of the American Medical Association.

"On Feb. 2, 1938 the Medical Society adopted a resolution requesting, at the next stated meeting, the facts relating to the present status of Group Health physicians at the various Washington hospitals."

And the rest of the sentence is stricken. It reads as follows:

"preliminary to appropriate disciplinary action in event any hospital had ignored the Medical Society's wishes in the premises."

Mr. Kelleher:—The report then continues:

"This resolution was referred to the Executive Committee and in turn to the Hospital Committee.

"The Hospital Committee reports that, at this time, the majority of local private hospitals contain in their by-laws a provision that a physician in order to practice in the hospital must be a member or qualified for membership in his or her local Medical Society.

"Only three of the local hospitals, (Columbia, Sibley and George Washington) have not followed this recommendation of the American Medical Association.

"All of the local private hospitals are co-operating fully with the Medical Society in respect to Group Health Association, Inc. At the present time only one of the local hospitals has on its staff list the name of a physician connected with Group Health Association, Inc. This hospital does not revise its staff list annually, as do the other hospitals, but it has assured the Chairman of the Hospital Committee that steps have been taken to deny this physician hospital privileges.

"The Hospital Committee urges that the Medical Society continue their full cooperation and avoid conflict with any of the local private hospitals.

"J. Ogle Warfield Jr.
Chairman, Hospital Committee."

Mr. Kelleher:—I ask permission to pass to the jury for their inspection Exhibit 296, which is the questionnaire; 311, which is the handwritten memorandum of Dr. Warfield, and 324, which is a draft of full report.

Mr. Leahy:—I think the jury ought to be instructed by your Honor that this is simply a memorandum of Dr. Warfield's in his own handwriting; that it is only offered against him, and that there is no evidence in the world that any other defendant in this case had any knowledge of it whatsoever.

Mr. Lewin:—I am permitted to read an excerpt from Exhibit 325, which has been identified as the transcript of the record of the proceedings of the first session of the case before the Executive Committee of the Medical Society of the District of Columbia, which is entitled, "Compensation, Contract and Industrial Medicine Committee of the District of Columbia, Complainant, vs. Allan E. Lee and Mario Scandiffo, Defendants."

This session was held on Monday, Dec. 6, 1937, in the Hearing Room of the Medical Society of the District of Columbia.

"The above entitled matter came on for hearing before the Executive Committee of the Medical Society of the District of Columbia, pursuant to notice, at 8 o'clock p. m.

"Present: E. Hiram Reede (Chairman), John A. Reed, Henry R. Schreiber, Raymond T. Holden Jr., William T. Gill Jr., Thomas E. Neill, C. N. Chipman, William M. Sprigg, F. X. McGovern, H. C. Macatee, Sterling Ruffin, C. B. Conklin, and R. Arthur Hooe."

U. S. EXHIBIT 326

Mr. Lewin:—And from Exhibit 326, which is a transcript of the record of the second session, held on Dec. 10, 1937, in the Hearing Room of the Medical Society of the District of Columbia, Friday, Dec. 10, 1937:

"The hearing in the above-entitled matter before the Executive Committee of the Medical Society of the District of Columbia was resumed, pursuant to the adjournment, at 8 p. m.

"Present: E. Hiram Reede (chairman), Raymond T. Holden Jr., F. X. McGovern, Daniel L. Borden, Henry R. Schreiber, William M. Sprigg, Henry C. Macatee, R. Arthur Hooe, C. N. Chipman, John A. Reed, R. Lomax Wells, Earle G. Breeding and C. B. Conklin."

U. S. EXHIBIT 327

Mr. Lewin:—And from Exhibit 327, the transcript of the record of the third session, of that case, held in the Hearing Room of the Medical Society of the District of Columbia, on Thursday, Dec. 16, 1937:

"The hearing in the above-entitled matter before the Executive Committee of the Medical Society of the District of Columbia was resumed, pursuant to the adjournment, at 8 o'clock p. m.

"Present: E. Hiram Reede (chairman), Daniel L. Borden, C. N. Chipman, C. B. Conklin, H. A. Fowler, R. T. Holden Jr., R. Arthur Hooe, H. C. Macatee, F. X. McGovern, Thomas E. Neill, John A. Reed and Sterling Ruffin."

U. S. EXHIBIT 328

Mr. Lewin:—And from Exhibit 328, which is a transcript of the record of the fourth session of the Lee and Scandiffo trial held in the Hearing Room of the Medical Society of the District of Columbia on Monday, Dec. 20, 1937:

The above entitled matter came on for further hearing before the Executive Committee of the Medical Society of the District of Columbia, pursuant to adjournment, at 8 o'clock p. m.

"Present: E. Hiram Reede (chairman), Daniel L. Borden, C. N. Chipman, C. B. Conklin, H. A. Fowler, R. T. Holden Jr., R. Arthur Hooe, F. X. McGovern, Thomas E. Neill, John A. Reed, Sterling Ruffin and W. M. Sprigg."

Mr. Lewin:—Now, I wish to resume the reading of the minutes of the meetings of the District Medical Society of the District of Columbia. I had read up through the month of February, 1938. I will begin with March 2, 1938.

"Minutes of the stated meeting of the Medical Society of the District of Columbia, held Wednesday, March 2, 1938, at 8 p. m.

"Dr. Daniel B. Moffett, First Vice President, presiding.

"Present: Drs. Edgar M. McPeak, James A. Cannon, A. L. Staveland, Luther H. Reichelderfer, William J. Mallory, Don Johnston, Thomas C. Thompson, R. Arthur Hooe, Jerome F. Crowley, Henry A. Montat, Harry A. Spiegel, Victor B. Rensch, J. Lawn Thompson, A. Frances Foye, William Gerry Morgan, H. C. Macatee, Arch L. Riddick, John H. Trinder, Oscar B. Hunter, Thomas E. Mattingly, W. C. Gwynn, and other members to the number of about 150.

"The Minutes of the preceding meeting, held February 23, were read and approved."

We now turn to page 3:

"Dr. Sprigg read from the agenda the notice sent to all members as follows:

"Notice to all members:

"You are hereby notified that pursuant to Chapter X, Article 11, of the Constitution of the Society, the report, finding and recommendation of the Executive Committee upon the charges made in writing under date of Nov. 22, 1937, by the Compensation, Contract and Industrial Medicine Committee against Mario Scandiffo, M.D., member of the Society, specifically charging him with having violated Chapter IX, Article III, Sections 1 and 2, and Chapter IX, Article IV, Section 5, of the Constitution of the Society, will be submitted at a meeting of the Society to be held Wednesday, March 2, 1938, at 8 P. M., in the Medical Society Building, for appropriate action by the Society pursuant to its Constitution.

"Dr. Sprigg, in continuing, read the following report, finding and recommendation of the Executive Committee:

"Washington, D. C.
Feb. 21, 1938.

"The Medical Society of the District of Columbia.

"In the matter of Mario Scandiffo, M.D.

"Whereas, the Compensation, Contract and Industrial Medicine Committee, by its Chairman, R. Arthur Hooe, M.D., under date of Nov. 22, 1937, did submit in writing to the Executive Committee charges against Mario Scandiffo, M.D., a member of the Medical Society of the District of Columbia, specifically charging him with having violated Chapter IX, Article III, Sections 1 and 2, and Chapter IX, Article IV, Section 5, of the Constitution of the Society.

"And Whereas, after due notice to the said Mario Scandiffo, M.D., the Executive Committee did hold hearings at which the said Mario Scandiffo, M.D., with his counsel, did appear, did testify in his own behalf, did produce witnesses in his defense, and was accorded full and fair hearing in response to said charges; the said charges were fully and impartially investigated, and at the conclusion of the said hearings, arguments, both oral and written, were submitted by counsel for said Mario Scandiffo, M.D.

"Whereafter, all of the evidence adduced at the said hearings was duly considered by the Executive Committee, and upon consideration thereof, the said Executive Committee, by more than a two thirds vote, finds the said Mario Scandiffo, M.D., guilty of violating Chapter IX, Article III, Sections 1 and 2, and Chapter IX, Article IV, Section 5, of the Constitution of the Medical Society of the District of Columbia, as charged by the Compensation, Contract and Industrial Medicine Committee, and recommends that he be expelled from said Society.

"And it is further ordered, that the report, findings and recommendation of the Executive Committee be submitted in writing to the Medical Society of the District of Columbia at its next regular business meeting for such action as may be deemed proper pursuant to its Constitution.

"William Mercer Sprigg,
Chairman, Executive Committee.

"Dr. Sprigg made a motion to the effect that the report of the Executive Committee be received and the matter of the recommendation be brought up for action by the Society at the meeting to be held on March 16, 1938. Seconded, and finally unanimously adopted."

"Dr. R. Arthur Hooe was recognized. He stated that from time to time he and members of the Compensation, Contract and Industrial Medicine Committee, have been approached by members of the Society, stating that Dr. So-and-So is doing refraction work, performing surgical operations, or doing eye, ear and throat work for Group Health Clinic. The question is invariably asked of the committee as to what it intends to do

about it. Dr. Hooe said he, upon further inquiry of the member of the Society, is told that his information is all hearsay. Dr. Hooe urged the members to get facts and not hearsay evidence, as hearsay evidence was of no value."

The minutes are signed C. B. Conklin, Secretary.

Now I turn to:

"Minutes of the meeting of the Medical Society of the District of Columbia, held March 16, 1938, 8 P. M.

Dr. Thomas E. Neill, President, presiding.

"Present: Drs. William J. Mallory, John D. Thomas, John B. Nichols, Henry B. Gwynn, John H. Trinder, Prentiss Willson, E. Hiram Reede, H. H. Schoenfeld, E. J. Cuning, H. S. Bernton, F. X. McGovern, Thomas E. Mattingly, Grant S. Barnhart, George R. Tribble, Worth B. Daniels, Alma Jane Speer, Edmund M. Ellerson, Marvin M. McLean, Frank L. William, J. A. Murphy, and other members to the number of about 175.

"The Minutes of the preceding meetings held March 2 and March 9 were read and approved. One correction was suggested by Dr. J. H. Trinder, who stated that he did not make the motion concerning Dr. Hall's application. The minutes were approved with correction.

"The Chairman of the Executive Committee was called on for report.

"Dr. W. M. Sprigg pointed out that the recommendations of the Executive Committee were presented to the Society on March 2, 1938, are in the hands of the Secretary and they now belong to the Society.

"The Chair stated that the business to be taken up tonight had no legal aspects whatsoever. It is a question of the Society following the Constitution and By-Laws. Further, that all the newspaper notoriety did not mean a thing and had nothing to do with what the Society decides to do.

"The Chair declared the question before the house was the dismissal of Dr. Mario Scandiffo as a member of the Society.

"In the discussion, Dr. Sprigg pointed out that the report, findings and recommendation of the Executive Committee were read by the Secretary in the minutes of March 2. He thought someone might want to have then re-read.

"Motion was made that the recommendation of the Executive Committee be accepted. Seconded.

"A member of the Society would inquire who Dr. Scandiffo is and whether or not he should be here tonight to be given a proper hearing. It would seem to him to be most improper to act on this matter without the gentleman being present.

"Dr. Sprigg would call the attention of those present to the provisions of the Constitution of the Society. He would suggest that the member familiarize himself with the Constitution. He pointed out that Dr. Scandiffo had had a hearing before the Executive Committee, represented by his counsel, which hearings lasted over a period of 4 or 5 weeks. Dr. Sprigg felt the member opposing action tonight was out of order.

"Dr. F. J. Gunning thought the gentleman was perfectly proper in questioning the procedure, and agreed that Dr. Scandiffo should be present tonight. He referred to his own case, some years ago, when he was exposed to some controversy over the provisions in the Constitution. He was of the opinion that the Constitution of the Society gives the member no rights.

"Dr. J. Lawn Thompson rose to a point of order, stating that the doctor was not speaking to the question before the house.

"Motion was made that discussions be limited to two minutes each, except by vote of the Society. Seconded and adopted.

"Dr. H. H. Schoenfeld was of the opinion that the original question was not completely answered. He stated that the fact was that Dr. Scandiffo had knowledge of this meeting tonight, had received notice of the business to be considered, had the right and privilege of appearing and appealing directly to the Society if he so desired. In view of the fact that he has not taken advantage of that opportunity it was his opinion that the Society could proceed with the consideration of the subject.

"Dr. Thomas E. Mattingly was recognized. He said it might seem as though he was contradicting himself because only a few nights ago he had presented certain resolutions for consideration of the Society concerning patients of Group Health Association, Inc., being admitted to hospitals, but he would make a recommendation that Dr. Scandiffo be suspended from membership. Dr. Mattingly called attention to a radio broadcast today which told what was going to happen in the event the Society expelled the Doctor in question; also there appeared in the Star, News and Times newspaper writeups concerning the case, in other words, before the Society had taken a vote the case was tried in the newspapers.

"The Chair stated that the question before the house was the dismissal of Dr. Mario Scandiffo for violation of Chapter IX, Article III, Sections 1 and 2, and Chapter IX, Article IV, Section 5, of the Constitution of the Society. Vote was taken, and the motion was adopted by a vote of 148 to 5.

"The Chair, therefore, declared that Dr. Mario Scandiffo was no longer a member of the Society."

Mr. Kelleher:—Exhibit 147 is a carbon copy of a letter from Dr. Olin West to Dr. George Edward Follansbee, 629 Euclid Avenue, Cleveland, Ohio, dated April 21, 1938, reading as follows:

"Dear Doctor Follansbee:

"I am enclosing a telegram received this morning from Dr. A. T. Talley, Chairman of the Board of Censors, Harris County Medical Society, Houston, Texas. Doctor Talley has been informed that this telegram has been referred to you as Chairman of the Judicial Council.

"As I understand the matter, Dr. Raymond E. Selders, a member of the Harris County Medical Society, accepted a position with the Group Health Association, Inc. in Washington, D. C., a corporation

now engaged in the practice of medicine in the District of Columbia. You may recall that this corporation was financed by the Home Loan Bank Board through the Home Owners Loan Corporation and that this action was rather severely criticized by an official committee of Congress.

"We were definitely informed that the United States District Attorney for the District of Columbia has ruled that the Home Loan Bank Board had no legal authority for providing funds for the support of the Group Health Association, Inc., that official rulings have been issued by duly constituted authorities in Washington to the effect that corporations cannot legally engage in the practice of medicine, and that the Group Health Association, Inc., is operating in violation of the insurance laws of the District of Columbia.

"The Medical Society of the District of Columbia has, as I understand it, expelled one member who accepted employment with the Group Health Association, Inc., and this action has created a great storm in Washington, which has been widely and persistently heralded in the local press. As stated in Doctor Talley's telegram, charges have been preferred against Doctor Selders, a member of the Harris County Medical Society, and apparently the board of censors of that society is undecided as to what should be done. It seems to me that the first thing the board of censors should do is to take the matter up with the council of the State Medical Association of Texas, but apparently the members of the board of censors feel that, as Doctor Selders is acting as an agent of the Group Health Association, Inc., outside of Texas, the matter is one for determination by the Judicial Council of the American Medical Association.

"Very sincerely yours,

"Dr. West.

Mr. Lewin:—

"Minutes of the regular meeting of the Executive Committee of the Medical Society of the District of Columbia, held Monday, March 28, 1938, 8 p. m.

"Dr. William Mercer Sprigg, Chairman, presiding.

"Present: Drs. S. A. Alexander, C. N. Chipman, William T. Gill Jr., A. C. Gray, Raymond T. Holden, R. Arthur Hooe, F. X. McGovern, John P. H. Murphy, Thomas E. Neill, John A. Reed, E. Hiram Reede, Joseph E. Wall, C. B. Conklin.

"The minutes of the preceding meeting, held March 21, 1938, were read.

"Dr. J. Ogle Warfield Jr., Chairman of the Hospital Committee, made a report relative to the first resolution that had been proposed by Dr. Thomas E. Mattingly, namely:

Mr. Lewin:—I am a little bit in a quandary as to what to do about this. This is offered as to all the defendants against whom there is a prima facie case. It is identical with the exhibit already shown to the jury, with the exception of the changes in ink. Do you think I had better read it? I want to be fair.

Mr. Richardson:—It has just been read five minutes ago.

Mr. Leahy:—It is all right to read it.

Mr. Kelleher:—Mr. Leahy wants it read.

THE COURT:—There is no point in taking the time unless it will serve some purpose.

Mr. Kelleher:—Mr. Leahy wants it read.

Mr. Lewin:—I will read it.

"Dr. J. Ogle Warfield Jr., Chairman of the Hospital Committee, made a report relative to the first resolution that had been proposed by Dr. Thomas E. Mattingly, namely:

"That the proper agency of the Medical Society be instructed to present at our next stated meeting the facts relating to the present status of Group Health physicians at the various Washington Hospitals preliminary to appropriate disciplinary action, in event any hospital has ignored the Medical Society's wishes in the premises.

"With slight changes which pertained to paragraph 2 and paragraph 3, the report was accepted, as follows:

"The Hospital Committee has purposely avoided the submission of a list of local hospitals for approval of the Medical Society. The eleven local hospitals therefore remain approved by the Medical Society as of Nov. 4, 1936. To have attempted to reapprove these hospitals last fall or this winter would have detrimentally created conflicts between the Medical Society and some of the local hospitals because of attempted enforcement of the provisions of Chapter IX, Article IV, Section 5 of the Constitution of the Medical Society.

"In an effort to maintain high standards of practice in the local private hospitals, the Medical Society adopted a resolution on Nov. 5, 1937, directing the Hospital Committee to recommend the best way of bringing the questions involved to the attention of the medical boards and boards of directors of the various local hospitals to insure the maximum amount of accomplishment with the minimum amount of friction and conflict. On Dec. 1, 1937, the Hospital Committee submitted a resolution, which was adopted, that the Medical Society recommend to the hospitals that they follow the recommendation of the American Medical Association, namely, that each hospital appointee be a member of his or her local medical society and a member of the American Medical Association.

"On February 2, 1938, the Medical Society adopted a resolution requesting, at the next stated meeting, the facts relating to the present status of Group Health physicians at the various Washington hospitals.

"The Hospital Committee reports that, at this time, the majority of local private hospitals contain in their by-laws a provision that a physician in order to practice in the hospital must be a member or qualified for membership in his or her local Medical Society.

"Only three of the local hospitals (Columbia, Sibley and George Washington University) have not followed this recommendation of the American Medical Association.

"All of the local private hospitals are cooperating fully with the Medical Society in respect to Group Health Association, Inc. At the present time only one of the local hospitals has on its staff list the name of a physician connected with Group Health Association, Inc. This hospital does not revise its staff list annually, as do the other hospitals, but it has assured the Chairman of the Hospital Committee that steps have been taken to deny this physician hospital privileges.

"The Hospital Committee urges that the Medical Society continue their full cooperation and avoid conflict with any of the local private hospitals.

"J. Ogle Warfield Jr.
"Chairman, Hospital Committee."

"Relative to Resolution No. 2 offered by Dr. Thomas E. Mattingly, as follows:

"That the proper agency of the Society take immediate measures to ascertain if any member or members of the Society are party to secret understandings and unethical arrangements with Group Health Association, Inc., whereby Group Health patients are admitted to Washington hospitals and treated under the service or supervision of Medical Society members possessing hospital privileges."

"Dr. Hooe, reporting for the Compensation, Contract and Industrial Medicine Committee, to which the resolution had been referred, stated that he considered the resolution to be ambiguous and further that he did not believe it was in the province of his committee to make investigations or report except upon authentic information received from members.

"A motion was made, which was seconded, to lay this whole matter on the table. Adopted.

"Dr. Hooe, in continuing, stated that a member came to him and stated that he had received a check for \$16 from the Group Health Association. He asked Dr. Hooe whether he should accept it. This was but one of many similar cases. Dr. Hooe, after deliberating, informed the member that it was all right for him to take the \$16 check and have it cashed in view of there being nothing to indicate that the doctor had been in consultation with Group Health Association employees and that the patient was to all intents and purposes a private case, although paid for by the Group Health Association.

"A member present stated that the Group Health Association had claimed to have paid over \$3,000 in checks in this way."

Those minutes are signed by C. B. Conklin, Secretary.

TESTIMONY OF DR. J. LAWN THOMPSON

DIRECT EXAMINATION

Mr. Kelleher:—

J. Lawn Thompson identified Exhibit 439, a letter from him to Dr. R. Arthur Hooe dated Aug. 16, 1937.

Mr. Lewin:—I will read from the minutes of the Special Meeting of the Executive Committee of the Medical Society of the District of Columbia, held March 29, 1938, at 8 p. m.:

"Dr. William Mercer Sprigg, Chairman, presiding.

"Present: Drs. A. B. Bennett, Daniel L. Borden, C. N. Chipman, Harry A. Fowler, William T. Gill Jr., Raymond T. Holden, R. Arthur Hooe, H. C. Macatee, F. X. McGovern, J. P. H. Mercier, Thomas E. Neill, John A. Reed, H. R. Schreiber, Joseph S. Wall, R. Lomax Wells, C. B. Conklin. In addition there were present Drs. J. Russell Verbruycke Jr., Mr. Charles S. Baker and Mr. F. A. Fenning, by invitation.

"The Chair stated that should anyone like to hear a re-reading of the minutes of the meeting held March 21, 1938, the minutes would be re-read. No one seemed to wish this done. The minutes were not re-read.

"Mr. Fenning was recognized. He stated that the Group Health Association, among other things, had a drug store where, he was informed, prices were about one third that of Peoples Drug Stores.

"It was thought by many present that if Peoples Drug Stores authorities, Mr. Gibbs in particular, were notified some action might be taken.

"Dr. H. A. Fowler stated that he was sure that he could make contact with Mr. Gibbs and that he could have some influence with him."

The minutes are signed "C. B. Conklin, Secretary."

I will now read from the minutes of the business meeting of the Medical Society of the District of Columbia held April 6, 1938, at 8 p. m.:

"Dr. Thomas E. Neill, President, presiding.

"Present: Drs. A. L. Staveley, James M. Moser, Charles W. Hyde, James A. Gannon, C. N. Chipman, Thomas E. Mattingly, J. Ogle Warfield Jr., J. Lawn Thompson, Frank D. Costenbader, Charles S. White, Jerome F. Crowley, Marvin M. McLean, Charles P. Cake, J. Russell Verbruycke Jr., Lyle M. Mason, Earl R. Templeton, V. R. Alfaro, Sterling Ruffin, William P. Herbst Jr., John H. Trinder, John A. Reed, and other members to the number of about 85.

"The Chair appointed Dr. E. Hiram Reede to act as Secretary in the absence of Dr. C. B. Conklin, who was attending a convention in New York City.

"The minutes of the preceding meetings of the Society, held March 23 and March 30, were read and approved."

"Dr. John H. Trinder made a motion that the Society go into executive session and that Dr. W. C. Woodward and the Public Relations Counsel, Mr. Fulton Lewis Jr., be allowed to remain. Seconded and adopted.

"The Chair appointed Dr. Benjamin F. Dean to act as Sergeant-at-Arms.

"Dr. J. Ogle Warfield Jr., Chairman of the Hospital Committee, read the following report:—

I will not read that again, your Honor. That is the same report, this time being made to the Medical Society. I read the one made to the Executive Committee:

"Upon motion, duly seconded, the report of the Hospital Committee was adopted."

The minutes are signed by C. B. Conklin, Secretary, and D. E. Everett, underneath.

Mr. Leahy:—Will you read from the bottom of page 6 and at the top of page 7? It is only about 7 or 8 lines, right after "Upon motion, duly seconded, the report of the Hospital Committee was adopted."

Mr. Lewin:

"Dr. Marvin M. McLean would inquire if there was not a provision in the Constitution which requires the Hospital Committee to annually approve the various hospitals.

"The President stated that there was no such thing in the Constitution.

"Dr. Sprigg expressed the opinion that it should be clear that the hospitals have a perfect right to decide who should practice in their institutions. The courtesy staff has to be revised every year. One of the hospitals has had members of the profession on its staff for years even though they have not been members of the Society."

Mr. Lewin:—The minutes are signed by C. B. Conklin.

TESTIMONY OF MARY G. THORNHILL

DIRECT EXAMINATION

By Mr. Kelleher:

Mary G. Thornhill said she is employed by Dr. Warren Sager as technician. She identified exhibits bearing Dr. Sager's signature.

Mr. Kelleher:—We now desire to offer in evidence Exhibit 439, which is a letter of Dr. J. Lawn Thompson to the defendant Hooe, the handwritten notation on the bottom of Exhibit 313 which has now been identified as bearing the signature of Dr. Sager, and the questionnaire from George Washington Hospital which has been identified as bearing the signature of the defendant Sager. I offer in evidence Exhibit 440 which appears to be an original letter from Sister M. Rodriguez to Dr. C. B. Conklin, dated Dec. 7, 1937.

(Here followed discussion over identification of documents.)

Mr. Kelleher:—May I also offer in evidence Exhibit 441 for identification, which appears to be a letter from Dr. J. Russell Verbruycke to Dr. William C. Woodward, dated May 29, 1937. The document which I am offering has been produced by the American Medical Association in response to a subpoena served upon them. I respectfully ask the court to compare that signature of Dr. Verbruycke with Exhibit 11 which has been identified as bearing his signature.

I also offer in evidence at this time Exhibit 442 for identification, which purports to be a letter from Dr. Conklin to the Chief of Staff of the Episcopal Eye, Ear and Throat Hospital, enclosing resolutions of Dec. 1, 1937, of the District Medical Society. Exhibit 442 and the enclosure were produced by the Episcopal Eye, Ear and Throat Hospital.

(Here followed extended discussion over admissibility of certain documents.)

Mr. Kelleher:—I would like to read this reply, the handwritten notation on the bottom of Exhibit 313, which is as follows:

"The surgeon for H. O. L. C. has been rejected. No other application has been received."

That is signed by Dr. Sager.

Mr. Kelleher:—Exhibits 305 and 306 comprise the questionnaire from George Washington University Hospital, signed by W. Warren Sager.

Mr. Kelleher:—Exhibit 305 is as follows:

QUESTIONNAIRE

1. What communication or inquiry has your hospital had from Group Health Association, Inc.?
 - Request for hospital privileges for Dr. Selders.
 2. What reply has your hospital made to Group Health Association, Inc.?
- Application has been referred to the Staff and the Committee on Hospital Privileges for action.

3. Which, if any of the following Doctors are now members of your Medical Staff in any capacity or have privileges to practice in your hospital?

Dr. Henry Rolf Brown
Dr. Allan E. Lee
Dr. Mario Scandiffo
Dr. R. Stephen Hulburt
Dr. Raymond E. Selders
Dr. Edmond D. Wells

None.

4. Is your hospital in sympathy with the policies of The Medical Society of D. C.?

Yes.

5. Is the entire medical staff of your hospital reappointed annually?

Yes.

6. Are appointments to the medical staff of your hospital approved by the Medical Staff?

Yes.

7. What governing body of your hospital finally makes appointments to the medical staff?

Medical Staff.

8. Does your hospital require membership in The Medical Soc. of D. C.?

No.

9. Does your hospital require membership in The Medical Soc. of D. C. as a qualification for appointment to its medical staff?

No.

10. What percentage of the entire medical staff of your hospital are members of The Medical Society of D. C.?

289 members of D. C. Med. Society 33 not members.

11. Does your hospital require membership in the A. M. A. as a qualification for appointment to its medical staff?

No.

12. What percentage of the entire medical staff of your hospital are members of the A. M. A.?

Yes.

13. Is your hospital a beneficiary of Community Chest funds?

Yes.

14. Will you kindly make any other inquiry that you think might be pertinent at this time?

W. Warren Sager."

TESTIMONY OF DR. FREDERICK C. FISHBACK DIRECT EXAMINATION

By Mr. Kelleher:

Frederick Coleman Fishback was secretary of the Washington Academy of Surgery from April 1936 to April 1937. It may have been 1937 to 1938. He identified the roster of the members of the Academy in 1934, 1935, 1936, 1937, 1938 and 1940. Many of the names were read.

He said he wrote up the minutes of the Academy and identified them.

By Mr. Kelleher:

Q.—I show you Exhibit 445 for identification and ask you if that is a carbon copy of a letter which you wrote to the Superintendent of George Washington University Hospital on Dec. 8, 1937?

A.—I think it is. It looks like my typing.

Q.—I show you Exhibit 446 for identification and ask you whether that is a carbon copy of a letter written by you, dated Dec. 9, 1937, and addressed "Dear John."

A.—I think it is.

Q.—Who was "John"?

A.—Dr. John Lyons.

Q.—Was he on the Committee on Hospital Privileges?

A.—Yes.

He also identified letters to Col. P. M. Ashburn, Columbia Hospital, to Providence Hospital and to Dr. Hooe, dated Jan. 31, 1938; also to Garfield Memorial Hospital.

CROSS EXAMINATION

By Mr. Leahy:

Q.—What is the Washington Academy of Surgery?

A.—It is—

Mr. Kelleher:—I think we might just as well stop this now, if your Honor please. While we do not object to the witness telling us, we know that it is going to lead to something else. I asked this witness only for the identification of documents and letters which he wrote, and the membership of the Academy. I think counsel for the defense should be confined in their cross examination to those matters.

Mr. Leahy:—I do not think I can be confined so narrowly as that. This man is placed before the jury as Secretary of the Washington Academy of Surgery. We have a right to let the jury know who he is and what the organization is of which he is secretary.

THE COURT:—I think in a general way that you can, but I would not let it go too far.

Mr. Leahy:—I am not going far into it, but I think we have a right to know about the organization of which he is secretary and why they put him on the stand.

THE COURT:—You may inquire.

By Mr. Leahy:

Q.—What is the Washington Academy of Surgery, Doctor?

A.—It is a scientific society made up of men here in Washington doing general surgery. It meets four times a year.

Q.—The annual meeting, I think you said, was some time in April of each year?

A.—Yes.

Q.—And your duties as secretary were what?

A.—The duties of the secretary are to record the minutes of meetings, get out notices of the meetings, and take care of—three of the meetings are dinner meetings held in a hotel or club, and the fourth meeting, which is also a scientific meeting, is held at the Society's building.

Q.—Did you personally jot down the minutes?

A.—I personally did.

Q.—Are you a stenographer?

A.—No; I am not.

Q.—When you took the minutes you jotted down the substance of what you thought had occurred?

A.—Yes.

Q.—And then were those minutes submitted for approval at any time?

A.—They were submitted at the next meeting, although they were frequently not read.

Q.—As I understand it, then, Doctor, when you would attend one of these meetings— By the way: how many would be present on an average? Or can you average that?

A.—I would say the average would run—it is hard to say the average, but somewhere between 45 and 50.

Q.—How big was the membership back in 1937 and 1938, April to April?

A.—About 42 or 44, all of whom would never come. There were usually 15 or 20 guests. Perhaps 25 or 30 members were present and probably 20 guests.

Q.—Is it not safe to say that the Washington Academy of Surgery was composed of the prominent general practitioners of the profession, but especially in surgery, in the District of Columbia?

A.—Every one who pretended to confine their practice to surgery belonged, provided they had been out of medical school a certain number of years.

Q.—And you did the best you could to jot down what you thought was the substance of what everybody said at the business meetings?

A.—Yes.

Q.—And you would take down in substance the subject matter of the papers of a scientific character which were read and discussed?

A.—Yes.

Q.—That is the reason, or one of the reasons, you got together to discuss these various scientific papers which were read by members?

A.—That was the prime purpose.

Q.—That was the prime purpose and object of the society, was it?

A.—Yes.

Q.—And then several letters or carbon copies of letters were submitted to you which you stated you sent out to various hospitals?

A.—Being the secretary, I would have applications sent to me from the various hospitals, applications of men wishing privileges in surgery, some in gynecology and some in major and minor surgery. Those which had to do with general surgery, in contrast with gynecology or orthopedic surgery, were sent to the Credentials Committee, an advisory committee. As a matter of simplification they were sent to me, and I think Dr. Lyons was secretary of the Credentials Committee, and I would forward the whole bunch with a letter of transmittal to him. Eventually they would come back and I would write a letter of transmittal to the superintendent of the hospital.

Q.—You were not on this Credentials Committee?

A.—No.

Q.—Let me see if I understand you. If some one made an application to a Washington hospital for the privilege of practice—

Mr. Levin:—We object to this, if your Honor please. There is no need to go over this again. It is beyond the scope of the direct examination, and Mr. Leahy is now going to testify to the jury.

Mr. Leahy:—No, I am not.

THE COURT:—Have those letters been offered in evidence?

Mr. Lewin:—No, they have not.

Mr. Leahy:—They are going to be offered after the Doctor is off the stand and I can't talk to him.

Mr. Lewin:—You know that that is improper. You can call him back any time you want to in your own case.

Mr. Leahy:—I do not need to call him back in my case when he is here in your case.

Mr. Lewin:—I know what you want to do: you want to cross examine this man—

Mr. Leahy:—If your Honor please, I am trying to cross examine him on—

THE COURT:—If any further testimony is needed in explanation of these letters, as a matter of expediting the case, would it not be well to get that now?

Mr. Lewin:—He is talking about applications made to hospitals and how they came to him, and all that sort of thing.

Mr. Leahy:—That is what those letters are about.

Mr. Lewin:—These are the only ones he has testified about, and they have not been put in evidence.

Mr. Kelleher:—All we have had him do was to identify them as having been written by him.

THE COURT:—I do not assume that you had them authenticated for nothing.

Mr. Lewin:—We want to offer them. There is no question about that.

Mr. Kelleher:—If they want to put him on the stand and get the subject matter of these letters they are entitled to do that in their case. It is precisely the situation that arose the other day when we discussed the matter of authenticating signatures of letters.

Mr. Leahy:—When a signature is authenticated it is authenticated not for the signature but for the contents above the signature; and when they offered to this gentleman letters which your Honor now has in your hand, referring to applications for practice in hospitals, they are to be identified by him not for the purpose of saying, "Yes, I remember writing such a letter or sending the original of that copy"; they are to be identified for the contents, and then they want to read the contents.

Mr. Lewin:—The question I objected to was not directed to any application.

THE COURT:—I think the question went too far. I will sustain the objection.

Mr. Leahy:—It is so far back now that I have forgotten the question.

THE COURT:—Ask another question, then.

Mr. Leahy:—All right, your Honor.

By Mr. Leahy:

Q:—Now, Doctor, to be specific I am just going to hand you the same documents that you identified earlier. These are the minutes of the regular meeting which was held at the Cosmos Club on Friday, Dec. 10, 1937, and you took those down personally, did you not?

A:—Yes, sir.

Q:—Did you write out pencil notes of them?

Mr. Lewin:—That has already been testified to. We object to that. He has given the same answer before.

THE COURT:—It may be repetition.

Mr. Lewin:—I object to that.

THE COURT:—It has been answered, and I suggest that counsel do not repeat.

Mr. Leahy:—That is what counsel says, but it was not. Nobody has yet said that he took pencil notes and later on transcribed them.

THE COURT:—Put your next question.

By Mr. Leahy:

Q:—After you had taken the pencil notes of the minutes of the meeting at the time the meeting occurred, how long after that did you transcribe them?

A:—Probably the next day, but I am not sure.

Q:—Did you personally transcribe them, or did you dictate them to your stenographer?

Mr. Lewin:—I object to that. It has already been testified to.

THE COURT:—I do not think so. He may answer.

A:—I actually typed those myself.

Mr. Lewin:—He so testified.

Mr. Richardson:—Now you are testifying.

THE COURT:—Let us get along, gentlemen. This is just delaying matters. I have ruled upon it. After I rule, it is better for counsel not to make comments. Whether my rulings are right or wrong I do insist that they be accepted and respected.

By Mr. Leahy:

Q:—I am showing you a series of carbon copies, 447, 448, 449 and 450 marked for identification. These went through your hands, did they?

A:—Yes, sir.

Q:—Did the subject matter contained on a single one of the originals of which these are copies come to your personal consideration for decision?

Mr. Lewin:—We object to that, if your Honor please. It has already been testified to. He told us exactly how he got them up.

THE COURT:—I do not remember.

Mr. Leahy:—I do not, either, your Honor.

THE COURT:—I am sorry, but I do not remember. Let him answer.

The Witness:—Will you read the question?

(The pending question was read by the reporter as above recorded.)

A:—No.

By Mr. Leahy:

Q:—When you wrote the originals of each one of these carbons did you write those originals as the secretary at the direction of some other committee of your society?

Mr. Lewin:—I object. That has already been testified to. He said he got this information from the Lyons committee, and he made up these letters as the result of that and sent them out. He gave that to us fully.

THE COURT:—Maybe he did. I do not recall it. I might not have been listening carefully enough.

Mr. Leahy:—I think counsel must be confusing what he has gotten from another source.

THE COURT:—It is not clear to me, and I would like to get it clear.

A:—I was simply a transmitting officer; that is all.

By Mr. Leahy:

Q:—Let me ask you this. Behind these letters, the originals of which you typed and of which these are the carbons that I now hold in my hand, from 447 to 450, are there other records of this Society showing the information upon which is based the information contained in these letters?

A:—Not in the possession of the Society.

Q:—Where is it?

A:—In the possession of the hospitals. These applications were sent to me and were in turn by me forwarded to the Credentials Committee who passed on them or not as they saw fit. They were returned to me with this letter of transmission. They are in most instances application blanks and were sent back to the hospital. At least I never had permanent possession of them.

Q:—Was the Committee on Hospital Privileges a committee of your organization?

A:—Yes.

Q:—Did that committee in your organization retain records of its action?

A:—I can't answer that question. I have never been on it.

Q:—As secretary of the association you have never seen any records?

A:—No; I have never seen those records.

Q:—Before you wrote the originals of these letters, copies of which I have in my hand, you received some kind of authorization, you stated, from the Committee on Hospital Privileges?

A:—Yes.

Q:—Was that in writing or oral?

A:—It was in writing, and it is probably in the file.

Q:—In the files of your society?

A:—Of the Society; yes. It is perfectly obvious that I can not remember a letter like that (indicating). I simply dictate the letter as I get it from Dr. Lyons.

Q:—Did he head up the committee?

A:—Yes, sir.

Q:—So that back of these records there are other letters in the files?

Mr. Lewin:—He says he thinks so.

A:—The authorization was in writing.

Mr. Lewin:—You have already testified to that.

The Witness:—So far as I know, it is in the files of the Society. These letters were sent on to the hospital superintendents.

Q:—And that would be the only authorization you would have to write those letters you have just mentioned?

A:—Yes.

Mr. Lewin:—We have had this at least four times, and I object to it.

THE COURT:—Yes. I think it is perfectly clear. Is that all, Mr. Leahy?

Mr. Leahy:—Thank you, your Honor; yes, sir.

(The witness left the stand.)

Mr. Kelleher:—If your Honor please, we now offer in evidence Exhibits 447, 448, 449, 450, 445, 446 and 444. Those are all of the documents which Dr. Fishback identified.

Mr. Leahy:—There is no special objection to 444, 447, 448, 449 and 450. I cannot see any materiality in 445 and 446.

THE COURT:—Pass them up.

FEBRUARY 26—AFTERNOON

TESTIMONY OF JOSEPH F. RANDALL

DIRECT EXAMINATION

By Mr. Lewin:

A.—Joseph F. Randall stated he was with the National Homeopathic Hospital as a member of the board and was president from 1936 to 1938. The hospital is about 55 years old. It is located at Second and N streets, Northwest, and they do a general hospital business. It takes care of about seventy patients.

J. B. Gregg Custis, chief of the medical staff, also a member of the board of trustees, identified a roster of the physicians who were on the staff of the National Homeopathic Hospital in 1937 and 1938.

(Mr. Leahy objected.)

THE COURT:—The objection is sustained until it is properly identified. The mere fact that a document is procured under a subpoena does not make it admissible.

By Mr. Lewin:

Q.—Would you take this roster and testify to the jury the names of the doctors whom you can recall as being attached to the staffs of the National Homeopathic Hospital during those years; read off the ones who are really the most active.

A.—I would say the most active were Dr. Custis, Dr. Davidson, Dr. Sappington, Dr. Shearer, Dr. Cajigas, Dr. Warner, Dr. Swormstedt, Dr. Birdsall, Dr. Leadbetter, Dr. Cox, Dr. Roger O'Donnell—that is about all I know.

Q.—While you were president was it customary for you each year to have the accounts of the National Homeopathic Hospital audited by an independent firm of certified public accountants?

A.—Yes, Mr. Ball took care of that.

Q.—The firm of Ball, Blum & Company?

A.—Yes.

Q.—And did that firm, in response to your request, furnish this report for the year ending Dec. 31, 1937, which I now hand you?

A.—This looks like their report.

There was considerable discussion over the admission of the audit.

Mr. Lewin.—Will your Honor reserve your ruling on that?

THE COURT.—Yes.

By Mr. Lewin:

Q.—Colonel Randall, did you have occasion to attend a large meeting held Oct. 30, 1937, at which Group Health Association project was the subject matter?

A.—Yes, I did.

Q.—Where was that held?

A.—The Mayflower Hotel.

Q.—And how did you happen to go to that?

A.—I received an invitation from the president of Group Health Association, Mr. Penniman.

Q.—Is that Mr. William F. Penniman?

A.—Yes. Mr. Penniman and I talked about it, and I talked to several other of the hospital presidents; asked them if they had been invited. They said, "Yes."

Q.—As a result of the invitation, you went?

A.—Yes.

Q.—Was it a banquet?

A.—Yes.

Q.—Do you know who spoke at the banquet?

Mr. Leahy.—I object to it; it is entirely immaterial who spoke at the banquet.

Mr. Lewin.—I want to identify the meeting.

Mr. Leahy.—It has been identified as having occurred at the Mayflower Hotel on Oct. 30, 1937.

THE COURT.—Yes, I don't think that is material. Will you step up here.

(Thereupon counsel approached the bench and conferred with the Court out of hearing of the jury.)

By Mr. Lewin:

Q.—Now, after the banquet was over, did you have occasion to talk with Mr. Penniman, the president of Group Health Association?

A.—Yes.

Q.—What was the subject matter of the conversation, without telling what the conversation was?

Mr. Leahy.—Objected to; hearsay.

THE COURT.—There is nothing apparent yet that would indicate its materiality. Will you come up to the bench, please.

(Counsel thereupon approached the bench and conferred with the Court out of hearing of the jury.)

By Mr. Lewin:

Q.—Now, at the time you had this conversation with Mr. Penniman, were you desirous of getting Group Health business for your hospital, the National Homeopathic?

A.—Yes. After I attended this meeting and saw what was going on I thought it was a pretty good thing, and asked Mr. Penniman—

Mr. Leahy.—Objected to.

By Mr. Lewin:

Q.—Did you so express yourself to Mr. Penniman?

Mr. Leahy.—The same objection.

THE COURT.—He cannot go into the details, but he may show by him whether or not he did express this desire, without going into any details of the conversation.

By Mr. Lewin:

Q.—Don't tell me Mr. Penniman's reply. Tell me whether you expressed that desire on your part to have Group Health patients for your hospital to Mr. Penniman.

A.—Well, it was this way. He—

Mr. Leahy.—You can answer that yes or no, please.

THE COURT.—Merely yes or no.

The Witness.—Yes.

By Mr. Lewin:

Q.—Now, give us as near as you can recall what was said by you.

Mr. Leahy.—I still object to this testimony. It is hearsay.

Mr. Lewin.—I am not asking what Penniman said.

THE COURT.—Confine yourself to what you said.

A.—I told Mr. Penniman we would like to have some of his business at the National Homeopathic, as I thought they were going to have some patients that would need hospitalization, and when the concern could pay cash we would be glad to have them at our regular prices.

By Mr. Lewin:

Q.—Did you a few days later have occasion to go to the Group Health Clinic?

A.—I visited their clinic on I Street, yes.

Q.—Tell us the circumstances of how you went there. Were you invited?

A.—At the meeting that night they invited us to come down to the clinic on I Street. I couldn't do it that day. I went a few days later. I met some of the doctors there. I think Dr. Brown.

Q.—Is that Dr. Henry Ralph Brown, the Medical Director?

A.—Yes, the head of the clinic. He showed me through. It looked like a wonderful place.

Q.—You were favorably impressed with it?

Mr. Leahy.—Objected to as immaterial.

THE COURT.—Sustained.

By Mr. Lewin:

Q.—How did its facilities and equipment compare with the facilities and equipment of other hospitals in the vicinity?

Mr. Leahy.—Objected to. Immaterial.

THE COURT.—Sustained.

By Mr. Lewin:

Q.—Did you after that, to wit, on Nov. 4, 1937, have occasion to attend a meeting of the board of trustees of National Homeopathic Hospital?

A.—Yes, I presided at that meeting.

Q.—Was the defendant J. B. Gregg Custis there?

A.—Yes.

Q.—Did you have any conversation with the board of trustees there with reference to Group Health Association?

A.—When the matter was brought up I talked about it, yes.

Q.—What did you tell the board?

A.—Well, the matter was brought up regarding the change in our requirement for members of our staffs.

Q.—Up to that time what had been the requirements of National Homeopathic for members of your staffs?

A.—Well, they had to be a graduate of a recognized medical school and a member of a medical society, and they had to have a couple of years' practice.

Q.—Did you require membership in the District Medical Society or American Medical Association as a prerequisite for granting medical staff privileges?

A.—No specific organization. It might have been any medical society, either home town or in any place.

Q.—Then what transpired with reference to Group Health in this meeting of November 4?

Mr. Leahy.—This is only against Dr. Custis?

Mr. Lewin.—Yes.

By Mr. Lewin:

Q.—What was the conversation that took place at that meeting of November 4 by the board of trustees with respect to Group Health Association?

A.—Well, I suppose, without mentioning Group Health Association specifically, what was brought up at that time was the change in our requirements for admission to the staffs.

Q.—Who brought it up?

A.—Dr. Custis.

Q.—What did he say?

A.—He said that the Society was going—or I am not sure whether they were going to or had made changes in their regulations, and required all their doctors—the doctors of the local society—to be members of the boards of hospitals; to have on their staffs only members of the local association.

Q.—Did he say what, if anything, would happen if you didn't comply with that request for a change in the requirements?

A.—I believe he offered a resolution for a change in our requirements at that time; stated it was necessary it be passed; otherwise most of the staffs would have to quit.

Q.—Did you, that fall, adopt that rule for the first time?

A.—Yes, we made the change.

Q.—What was the reason for making the change?

A.—The majority of the board voted for it, for the amendment offered by Dr. Custis.

Q.—Did the statement of Dr. Custis that unless the change was made the staff would have to quit affect the decision of the board?

Mr. Leahy.—Objected to as leading; highly argumentative.

THE COURT.—Sustained.

By Mr. Lewin:

Q.—What was it that induced the action of the board to change your rules?

A.—I don't know. I voted against the resolution. I don't know what effect it had on the board, but they voted against it.

Q.—You mean in favor of it?

A.—They put it through; they voted against me; there were two of us voted against it.

Q.—Who was the secretary of the board of trustees?

A.—Mrs. Thompson.

Q.—Do you know her handwriting and signature?

A.—Yes.

Q.—I show you what purports to be the minutes of that meeting, and ask you whether those are signed by Doris W. Thompson, Secretary.

A.—Yes, that is her signature.

Mr. Lewin.—I offer the minutes—that portion of these minutes which deals with Group Health—in evidence.

THE COURT.—You mean at that particular meeting?

Mr. Lewin.—Yes. Do you object to it?

Mr. Leahy.—Yes, your Honor.

THE COURT.—Will you gentlemen step up here?

(Thereupon counsel approached the bench and conferred with the Court out of hearing of the jury.)

Here came extended discussion over the admission of the minutes.

By Mr. Lewin:

Q.—Colonel Randall, do you recognize this book which I showed you a minute ago as the official minute book of the board of trustees of the National Homeopathic Hospital for the year 1937?

A.—That is the book.

Q.—That is the book. Now, did the board of trustees have a secretary?

A.—Yes; Mrs. Thompson.

Q.—That is Mrs. Doris W. Thompson?

A.—Yes.

Q.—What were her duties in connection with the meetings of the board of trustees?

A.—She kept a record; she sent out the notices to the different members of the board; kept a record of the meeting.

Q.—And was that in the usual course of the business of the board of trustees for her to take down these minutes?

A.—Yes.

Q.—I have shown you what purports to be minutes of this meeting, and I think you have already testified those are the minutes of that meeting.

A.—I didn't read it. I looked at Mrs. Thompson's signature and it looks like her signature.

Q.—Will you look it over and tell us whether those are the minutes which Mrs. Thompson took of that meeting?

A.—It is hard for me to read this writing.

Q.—That is all right. Take your time. I am not asking you about the substance of what is recorded there. I simply want to know whether those are the minutes taken of that meeting, by Mrs. Thompson.

A.—Well, that is several years ago, but it sounds very much like it.

Q.—You would be willing to testify that Mrs. Thompson took those minutes in the ordinary course of business; that is her handwriting, and that is her signature?

A.—That is the only way she could get them, as secretary of the board. I don't know whether she writes shorthand. That is the only way she could get it.

Mr. Lewin.—Now, your Honor, have I complied with the statute? I offer it in evidence.

THE COURT.—Any objection?

Mr. Leahy.—No special objection.

(Minute Book of Board of Trustees, National Homeopathic Hospital, showing minutes of meeting of Nov. 4, 1937, was marked U. S. 453 and received in evidence.)

Mr. Lewin.—“Nov. 4, 1937.

“A meeting of the Board of Trustees of the National Homeopathic Hospital was held at the hospital at 12 noon, Nov. 4, 1937.

“Present: Colonel Randall, Presiding; Mrs. Dodge; Mrs. Zoller; Mr. Lauris McLachlen; Mr. Brown; Dr. Custis; Mr. Doing; Mr. and Mrs. Ross Thompson.”

Now I am going to omit a portion of what is written here.

“Colonel Randall told of having attended a meeting to discuss a proposed clinic for the H. O. L. C. Sponsors of this clinic wanted to know if it would be possible to send patients to our hospital and have their doctors attend the patients. The board held open discussion on the subject and decided that as long as this clinic is not accepted by the District Medical Society that we cannot recognize it. They pay the doctors salaries, charge monthly fees, do no charity work, and the men on their medical staff are not recognized by the District Medical Society. They want the hospitals to accept patients at the prevailing rates. If at a later date the District Medical Society accepts and approves this clinic, the board of trustees will consider the plan.

“Doris W. Thompson, Secretary.”

By Mr. Lewin:

Q.—Now, Colonel Randall, I wonder if you will tell the jury who it was in that open discussion referred to that moved that as long as the clinic is not accepted by the District Medical Society “we cannot recognize it.”

A.—That was Dr. Custis.

Q.—Who was it that made this statement in that discussion: “They (referring to Group Health) pay the doctors salaries, charge monthly fees, do no charity work, and the men on their medical staff are not recognized by the District Medical Society”?

A.—I am not sure about that. That might be Mrs. Thompson's idea of what transpired at the meeting.

Q.—Now, I show you what purports to be the minutes of a meeting of the board of trustees of the National Homeopathic Hospital, held Dec. 30, 1937; also this notation:

“Original minutes taken out of minute book” in the front of it, and ask you whether that is Mrs. Thompson's signature, as secretary, at the end of those minutes.

A.—Yes.

The witness identified further minutes.

U. S. EXHIBIT 454

“Dec. 30, 1937.

“A meeting of the Board of Trustees of the National Homeopathic Hospital was held at 12 noon, Dec. 30, 1937 at the Hospital. Present: Col. Randall, presiding; Mrs. Dodge; Dr. Custis; Mr. McRae; Mr. Brown; Mr. Delos Smith; Mr. McKee; Mr. McLachlen; Mr. Doing and Mrs. Thompson.

“The minutes of the previous meeting were read and accepted and the Treasurer's report was read.”

“A recommendation from the Executive Staff meeting that the Courtesy Staff again be accepted, with the exception of the Doctors who are not recognized by an organized Medical Society in Washington, D. C. and vicinity. These Doctors are to be given three months grace in which to join such a Medical Society. Dr. Custis moved that this recommendation from the Executive Staff be acted upon. It was duly seconded and carried. Mr. McLachlen suggested that the Hospital write letters to the accepted Doctors on the Courtesy Staff informing them of their acceptance and asking for their cooperation with the Hospital.”

Mr. Lewin.—And it is signed by “Doris W. Thompson, Secretary.”

And then I might offer this:

“A unanimous vote of thanks was expressed to Col. Joseph Randall for his splendid work while President of the Board of Trustees.

Signed “Doris W. Thompson.”

By Mr. Lewin:

Q.—Now there is a reference in the minutes to the executive staff. What was the executive staff?

A.—It was composed of the doctors on the staff.

By Mr. Lewin:

Nov. 9, 1937.

"Dr. C. B. Conklin, Secretary,
Medical Society of the District of Columbia,
1718 M Street, N.W.,
Washington, D. C.

"Dear Dr. Conklin:

"As the attitude of the National Homeopathic Hospital toward the Group Health Association is apparently not clear to various members of the District Medical Society, I am enclosing a copy of a letter sent today to their president, Mr. Penniman, by Dr. J. B. Gregg Custis, executive officer of our board of trustees.

"Yours very truly,
"Frances Whitlock Hall,
"Superintendent."

The letter referred to therein is already in evidence.

By Mr. Lewin:

Q.—Now, who succeeded Miss Hall as superintendent of the National Homeopathic Hospital?

A.—Mrs. Treasure.

Here came discussion over minutes kept by Mrs. Treasure.

By Mr. Lewin:

Q.—I hand you Exhibit 452, Colonel Randall, and ask you to tell the jury—you might refresh your recollection—what are the principal items of expense which your hospital had during the year 1937?

Mr. Leahy:—I object to it as immaterial. Secondly, he cannot refresh his recollection on something he did not write.

Mr. Lewin:—That is not the rule at all. He may refresh his recollection from anything.

THE COURT:—I think the objection should be sustained.

Mr. Lewin:—You mean on the ground of refreshment?

THE COURT:—On the ground I don't see the materiality of it.

Mr. Lewin:—Your ruling on the demurrer—you made that very point on that—that there was not sufficient allegation of the business of the hospital. There is proof that they are in business and we want to show by this document the business. We want to show the business for which it was organized.

THE COURT:—Well then, produce the corporate charter. That will show the business. This report of an auditor will not.

Mr. Lewin:—I have already withdrawn that in response to your Honor's ruling. I have asked him what the main items of expense are.

Mr. Kelleher:—We are not asking for figures; merely the general items.

THE COURT:—I don't understand it is material whether this concern was making or losing money.

Mr. Lewin:—I have not asked for that. I want to show what type of business that hospital carried on.

THE COURT:—Can that be done by this witness?

Mr. Lewin:—It can be done by the testimony as to the fact of the main items of expense.

THE COURT:—I don't think that gives us a good idea of the business.

Mr. Lewin:—It may not give us a very good idea of it, but it is the best I can do. I have to take the best I have and proceed step by step.

Mr. Leahy:—Do you want to prove by this witness what the expenses of the hospital were?

Mr. Lewin:—I would like to have you admit that the items of expense shown in this report are in fact the items of expense incurred by the hospital.

Mr. Leahy:—How can I admit anything on that?

THE COURT:—Mr. Lewin, you mean the items of expense there indicated would show the details of the business they were transacting?

Mr. Lewin:—I don't think there is any doubt about it.

THE COURT:—Does he know that? Ask him.

By Mr. Lewin:

Q.—Can you remember what the main items of expense were for the National Homeopathic Hospital during 1937?

A.—They would be general operating expenses, such as salaries, food for patients, coal, electric light bills. I know we spent some fourteen thousand dollars that year for a new set of boilers, heating system; had to buy medicines, had to buy supplies, buy sheets once in a while; paint the place.

Q.—How did you get the laundry done?

A.—We did our own.

Q.—Did you maintain a kitchen?

A.—Yes.

Q.—What was the main source of the hospital's revenue?

A.—The patient who came in and occupied the room.

Q.—In other words, you rented these rooms at a regular charge?

A.—Yes.

Q.—And you had expenses for housekeeping, in connection with those rooms?

A.—Yes, we would have office expenses, too. The officers received no pay.

Q.—Did you have expenses for medical and surgical care?

A.—Yes.

Q.—Nursing care?

A.—Yes.

Q.—Anesthesia?

A.—Yes.

Q.—Laboratory?

A.—Yes.

Q.—Operating room?

A.—Yes.

Q.—Pharmacy?

A.—Yes.

Q.—Did you operate a pharmacy?

A.—Well, we had a drug section.

Q.—Did you have to buy drugs?

A.—We furnished drugs.

Q.—How about x-rays?

A.—Yes, we had x-rays.

Q.—Administrative expenses?

A.—Yes, we had to run the office.

Q.—And you have already testified about heat and light and power?

A.—Yes.

Q.—How about maintenance of the building?

A.—Yes, that was an expense; and we reduced the mortgage.

Q.—And dietary?

A.—That went with the food.

Q.—Maintenance of personnel: what would that be?

A.—That would be under the general salaries of all employees; the office force.

Q.—Would you have a library and expense in connection with the maintenance of that library?

A.—No.

Q.—How about medical records and library; would that refresh your memory?

A.—Well, they usually kept the records and they may have had them bound occasionally. I am sure it cost money to keep any records.

Q.—Did you maintain a training school for nurses?

A.—We did until 1936.

Q.—Did you have any charge for ambulances?

A.—We had no ambulance.

Q.—Would you have to rent one when you required an ambulance?

A.—The patient would order an ambulance; we would order it for him.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Mrs. Dodge, who is she?

A.—She is also president of the ladies' board of the hospital; she is the wife of the real estate man.

Q.—Where is his office?

A.—In the Washington Building.

Q.—And Dr. Custis. Is he Dr. Custis of whom we have spoken here?

A.—Yes.

Q.—And Mr. McRae, who is he?

A.—A retired business man; he formerly represented the L. C. Smith Typewriter people.

Q.—Who is Mr. T. J. Brown?

A.—He is an insurance man.

Q.—Who is Mr. Delos Smith?

A.—An architect.

Q.—And Mr. McKee?

A.—He is vice president of the Security Savings Bank.

Q.—At Ninth and G?

A.—Yes, and they have a branch.

Q.—And Mr. McLachlen?

A.—He is Mr. Lanier P. McLachlen; he is president of the McLachlen Banking Corporation.

Q.—And who is Mr. Doing?

A.—He is treasurer and vice president of the Washington Loan & Trust.

Q.—And Mrs. Thompson is the secretary?

A.—Yes.

Q.—Were these trustees included in that minute the trustees throughout the period during which you acted as president of the board?

A.—Not the entire time.

Q.—I am now showing you Government's Exhibit 453. I notice in there a Mrs. Zoller. Who is she?

A.—She was a visitor; she wasn't a member of the board; she was a member of the ladies' board; she came with Mrs. Dodge.

Q.—And now there is a Mr. and Mrs. Thompson. Who is he?

A.—He is a member of the board, and he is the husband of Mrs. Doris Thompson, the secretary.

Q.—Now you also identified those members on the medical staff who you stated were the most active. Did you mean by that doctors who had the most patients normally in the hospital?

A.—Yes, they were the ones I came in contact with most; I wasn't there all the time. I would see them when I went there and I knew they were the doctors who brought in most of the business. I remembered their names.

Q.—The courtesy staff and the regular staff consisted of many doctors, did it not?

A.—Yes, and then there was an executive staff, which was composed of six or seven.

Q.—But those doctors were the ones who had most of the patients in the hospital during the time you were there as president?

A.—Yes.

Q.—And when you said they were the most active, that is what you referred to?

A.—Yes, they were around the hospital; would know what was going on.

Q.—Now you stated, when your attention was brought to it, that at the meeting of Nov. 4, 1937, there occurred a discussion before the board as to a change in the requirements of the hospital for applicants for staff privileges?

A.—Yes.

Q.—Now before that time, you had always had some requirement for a doctor who desired membership on your staff, did you not?

A.—Yes.

Q.—In other words, any doctor just couldn't come to your hospital with a patient and treat the patient in your hospital?

A.—No.

Q.—Before he went into your hospital to treat a patient, he was required to make application to the Board for the privilege of so doing; is that not it?

A.—Yes. He would come to us.

Q.—What board was it to which he would make such application?

A.—He would write a letter to the hospital. It would be referred to the board of doctors and they would pass on it, and whatever action they would take they would report to the Board of Trustees, and we generally upheld them, whatever they said.

Q.—How many years have you been connected with Homeopathic in any capacity?

A.—About five years; four or five years.

Q.—And during those five years you have been connected with Homeopathic it was the custom and practice, when a doctor would make application to the board of doctors, the doctors would cause an investigation to be made of him, as a result of which they would make their report to your Board of Trustees and your Board of Trustees would then vote on it; is that the way it usually worked?

A.—We did that every year.

Q.—In your hospital staffs were passed on each year?

A.—By the Board?

Q.—Yes?

A.—Yes.

Q.—For instance, if a doctor was admitted to practice in your hospital, that gave him the right to practice for a year after his application was favorably reported on; is that correct?

A.—I don't think we limited him to a year, for the reason that they didn't make application each year after they were first approved.

Q.—Then you didn't have the rule that each year members of the medical staff would have to renew their application for privileges?

A.—It was supposed to be like that, but we didn't stick to it. I think we are doing it now.

Q.—Now, going back to the qualifications. Was there not always a rule in your hospital as to the fundamental qualifications of any applicant for admission to the staff?

A.—Yes.

Q.—Those were set forth in the shape of a by-law; isn't that true?

A.—It was in a little book we had there. We did require a man to be a graduate of a recognized medical school; to have served the necessary internship; to have had experience in the line of work that he intended to do in the hospital, and that he belong to some medical society.

Q.—And do you recall also that rule which you have just told us about which in substance stated that if the doctor was a member of your Homeopathic Society that he was qualified for admission to practice, provided that he had the other requirements; was a graduate of a school you recognized; had served his internship and so forth?

A.—Oh, yes; if he belonged to a Homeopathic Society. I don't know whether there was one in Washington or not. Homeopaths are recognized just the same as allopaths. We didn't confine our hospital to homeopaths. There were many allopaths.

Q.—But if a doctor applied for privileges who was a member of the Homeopathic Society, that qualified him for admission, provided he had the other qualifications which we have just discussed?

A.—Yes.

Q.—And that rule had been in force also during the entire period you were in the hospital?

A.—As long as I was in the hospital it was, yes.

Q.—And during the period while you were there as president of the board, did you have any trouble with the District Medical Society or the American Medical Association about any member of your staff being a member of the Homeopathic Society?

A.—No, we were in good graces with them.

Q.—Never had any difficulty with them?

A.—Never heard of it; never came to my attention.

Q.—And you attended the meetings of the boards pretty regularly?

A.—Yes; when I was able.

Q.—Do you recall whether it was at the meeting of November 4, that the question in reference to the qualifications of applicants for privileges on either staff came up?

A.—I am not quite sure it was, because I attended another meeting; I think on the 11th, and I was so surprised—

Mr. Lewin:—Meeting of what?

The Witness:—I attended the general meeting of the Medical Society in the District of Columbia.

By Mr. Leahy:

Q.—I am referring to the board; your own Board of Trustees.

Mr. Lewin:—He has told you why this came up.

Mr. Leahy:—Let me reframe the question. Let's look over Exhibit 453, let's look that over together, and see if we can refresh your recollection; that is, about the paragraph that refers apparently to what Miss Thompson thought about the matter.

Q.—Will you read that over and see if you can refresh your recollection?

A.—Do you mind if I read it all?

Q.—No, go ahead.

Mr. Lewin:—You will admit he can refresh his recollection from something he didn't sign?

Mr. Leahy:—I am following you.

Mr. Lewin:—Well, it is good law, anyway.

The Witness:—What do you want to ask me?

By Mr. Leahy:

Q.—Do you recall now whether it was the question of changing the requirements for applicants for admission to either staff in your hospital that came up on the evening of Nov. 4, 1937?

Mr. Lewin:—It was noon.

Mr. Leahy:—I mean that day.

A.—Yes, I am quite sure it was brought up at that meeting. This may be Miss Thompson's idea of the whole thing, but I am quite sure it was brought up at that meeting, because I was surprised later to learn that the Medical Society had not taken that action and was still discussing the matter at their meeting of November 11, which I attended.

By Mr. Leahy:

Q.—In any event, Miss Thompson didn't record any action as having been taken of that kind so far as this meeting is concerned?

A.—That is right.

Q.—But at all events, to the best of your recollection, the Board on November 4 heard open discussion on the subject and decided that this clinic "isn't accepted by the District Medical Society; we can't recognize it"?

A.—Well, it was discussed in general by a couple of the members. I talked about it. I talked in favor of taking business from Group Health. I believe Mr. McLachlen was favorable to that, but Dr. Custis—I don't think anyone else talked up against it except Dr. Custis, and maybe Miss Thompson. Our people were not very quick to take sides.

Q.—In other words, you freely discussed the matter back and forth?

Mr. Kelleher.—He said he did.

By Mr. Leahy:

Q.—You listened. It was discussed?

A.—Yes.

Q.—I think you said you weren't very quick on making changes but that the matter was discussed.

A.—Yes; and I was in favor of accepting the business, because I knew it would be there. It was just a difference of opinion among the members.

Q.—Now, do you remember Dr. Custis' discussing one side of it?

A.—Yes.

Q.—Do you remember anything that Dr. Custis said with reference to Group Health Association?

A.—I don't remember his exact words, but it was that this was an organization in business and that they were not acceptable to the Medical Society, and then the Medical Society could not have a proficient staff if we accepted doctors from Group Health; and if we did accept them, the doctors who belonged to the Medical Association would have to resign.

Mr. Lewin.—Resign from what?

The Witness.—From our board.

By Mr. Leahy:

Q.—Let me see if I can refresh your recollection, Colonel. Do you remember when this matter came up for discussion that Dr. Custis was called upon by the Board to give his views with reference to the advisability of recognizing the clinic in the hospital at that time?

A.—Yes; that was discussed.

Q.—Do you remember that Dr. Custis then advised the Board that it had been reported, in his judgment, that G. H. A. was very probably illegal?

A.—I think that was discussed.

Q.—Did he also say that G. H. A. very probably was not financially sound?

A.—I don't think he stated that, because he thought that they had plenty of money. He stated they had plenty of money that was furnished by the Home Owners Loan, or something like that. I saw myself that they had a well equipped place; and I don't think he mentioned the fact that they were not financially responsible.

Q.—Did Dr. Custis say at that meeting that the way the clinic had been financed was by moneys advanced by the Home Owners Loan Corporation and that the fees in the shape of dues which they were charging would not be sufficient to carry them on once the money which they got from the H. O. L. C. was exhausted?

A.—I think that was Dr. Custis's opinion.

Q.—That opinion was considered by the full board, was it not?

A.—In discussing the whole matter?

Q.—Yes.

A.—I suppose it was. They must have had some reason.

Q.—You were there, were you not?

A.—Yes. I disagreed with the doctor, because I thought—
THE COURT.—You have told us that. Just answer the question.

The Witness.—What was the question?

By Mr. Leahy:

Q.—The opinions which you voiced and the opinions which Dr. Custis voiced—the whole angle was talked about on one side or the other and was considered by the full board?

A.—Yes; it must have been.

Q.—And of the nine members present, seven agreed with the views expressed by Dr. Custis?

A.—Yes.

Q.—And you, who had been on the other side of the question, stuck to your opinion and voted against him?

A.—Yes. But after it was all over we were for the whole.

Q.—Then it was the action of the Board after seven had voted for the measure; is not that right?

A.—It was not discussed any more. We would go right along with them.

Q.—You stated something about this having been said, that it would be necessary for the members of the Medical Society who were on your staff to resign in the event you recognized the clinic?

A.—Recognized the doctors and allowed them to practice in our hospital.

Mr. Lewin.—I object to that. Colonel Randall did not say that; he said Dr. Custis said that. That is in the evidence.

Mr. Leahy.—All right. I do not care who said it. I want to get the fact. Somebody said it.

By Mr. Leahy:

Q.—Was it Dr. Custis?

A.—I understood you to ask me what I understood Dr. Custis to say.

Q.—It was Dr. Custis who said that in connection with the matter?

A.—Yes.

Q.—Is not this what he said to you in connection with that clinic, which he said was very probably illegally conducting business, and he said something which brought up the discussion with reference to the finances of the clinic, that if the hospital at this time permitted the doctors to practice in your hospital, and later on the District Medical Society did not approve the clinic, that then, under the constitution of the District of Columbia Medical Society, the doctors would be prevented from practicing in your hospital? Is not that what he said, in substance? I cannot quote his words.

A.—It might be something like that.

Q.—Do you remember also that there was a discussion in the meeting about the doctors being paid salaries at Group Health and that they were charged monthly fees and that they did no charity work? Do you remember a discussion about Group Health doing no charity work?

A.—Yes.

Q.—Do you remember Dr. Custis saying that the clinic was not set up to help the poor, and that the poor would still be thrown back upon the regular doctors who now attended them?

A.—He may have mentioned that; but I told him I thought it was a good thing.

Q.—You still stuck by your opinion?

A.—For, if you can buy medical care for \$3 a month that is good—

Q.—Did Dr. Custis take issue and say that you cannot provide care for \$3 a month, and that is why it was financially unsound?

A.—I don't think he used those words, but I think those were his ideas; yes.

Q.—I do not talk medical language?

A.—Yes; I think that was his idea.

Q.—Finally the conclusion of the action as to that hospital was that if at a later date the District Medical Society accepted and approved the clinic, your board would then consider the plan of G. H. A.; is that right?

A.—Yes. Up to that time we had no applications from them.

Q.—I want to ask you if you will not kindly look over Government Exhibit 454 again, Colonel, please. If you want to read that front page, just read that over, will you? Do you recall whether in the meeting of December 30 there was any discussion of the recommendation from the executive staff with reference to the qualifications of doctors on the staff of your hospital?

A.—We approved the staff as submitted by the doctors. Dr. Custis brought a list and we approved that.

Q.—That list came from where?

A.—It was made up of the men who had been accepted by the group of doctors, and also approved by the Board the year before. I do not think there were any new ones admitted during that year except resident doctors and interns. I don't know of any new ones that came in there.

Q.—You mentioned the fact that Dr. Custis would bring it in from a group of doctors. Was that group known as the Executive Staff of the hospital?

A.—Yes, sir.

Q.—How many doctors were on that staff?

A.—On his immediate group I believe there were about five.

Q.—Could you name them?

A.—Dr. Custis, Dr. Birdsall, Dr. Davidson, Dr. Sappington and Dr. Shearer. I think they were the principal ones.

Q.—And that was the Executive Staff from which a recommendation came that the courtesy staff be again accepted "with the exception of the doctors who are not recognized by an organized medical society in Washington and vicinity." Do you remember that?

A.—I am not sure of the wording of it, but I know they brought in a recommendation and we approved it.

Q.—When it speaks of giving three months grace in which to join such a medical society, that means, does it not, that the doctors whom the Executive Staff recommended for acceptance by your board of trustees, if they did not belong to the District Society, the Homeopathic Society or the Virginia Society, they had three months in which to join?

A.—They had three months. I understand that to be three months in which to join a medical society; those men out of town who occasionally practice at Homeopathic and were still on the staff.

Q.—Did they mean the Medical Society of Washington, D. C., or in Maryland or in Virginia?

A.—After that meeting it would mean the D. C. Medical Society.

Q.—Only the D. C. Medical Society?

A.—Yes.

By Mr. Leahy:

Q.—Now, Colonel, you do not know anything about this letter personally, do you—Exhibit 339?

A.—That must be what Mr. Penniman called me up about. He called me out in the country—

Mr. Lewin.—What is that?

A. (Continuing)—and I had to apologize to him. He got a letter from the hospital.

THE COURT.—Let us have the examination in an orderly way, please.

Mr. Lewin.—I could not understand what he said.

THE COURT.—The witness goes on voluntarily to speak of things that are not asked. Let us confine the examination. I was speaking more to the witness than I was to you.

By Mr. Leahy:

Q.—You were asked several questions in reference to items of expense that went into the conduct of the hospital. Homeopathic Hospital was running a regular hospital?

A.—Yes.

Q.—And any of the expenses which you incurred in the conduct, maintenance and operation of the hospital were made necessary in the conduct, maintenance and operation of a hospital for the sick?

A.—Oh, yes.

Q.—You were asked about a drug store. You were not conducting a drug store for public patronage, were you?

A.—No, sir.

Q.—The drug store was made necessary because drugs had to be taken from it in order to care for the sick?

A.—We merely had a department where we kept some drugs.

Q.—And when you were talking about a dietary, you did not mean that you were running a lunch room for public use?

A.—Not at all.

Q.—And you were not buying and selling coal as a business?

A.—No.

Q.—There was not anything which you did in connection with the hospital except to incur the necessary expenses required to take care of a proper place for the sick?

A.—That is correct.

RE-DIRECT EXAMINATION

By Mr. Lewin:

Q.—You testified, I believe, that Dr. Custis told the board of trustees at the November meeting that unless the staff were limited in a certain way, the members of the Homeopathic Medical Staff who were members of the District Medical Society would have to leave your hospital; is that right?

A.—Yes, sir.

Q.—What was the limitation that he said the hospital would have to put into effect in order to avoid that?

Mr. Leahy.—I do not like to interrupt, but that has been gone over by both of us.

Mr. Lewin.—You tried to shake it, and I did not want it left confused.

Mr. Leahy.—It is not confused. The record shows what we both said.

Mr. Lewin.—I am entitled to have his testimony.

THE COURT.—If you think there is any doubt about it you may ask him. I want counsel on both sides to avoid mere repetition.

Mr. Lewin.—I am trying to.

THE COURT.—If counsel have any doubt about it of course I want it cleared up. You may ask the question.

Mr. Lewin.—Will you read the question, Mr. Reporter?

(The last two questions and answers were read by the reporter as above recorded.)

Mr. Leahy.—That is pure repetition, if your Honor please.

Mr. Lewin.—We have been all over that.

Mr. Leahy.—I know you have.

Mr. Lewin.—No; I mean, your objection.

THE COURT.—Give the witness a chance to think, and let him answer, and then we will get along with the next question. Have you got the question, Colonel?

The Witness.—I have it.

THE COURT.—All right. You may answer.

The Witness.—My impression was, from Dr. Custis's statement, that the Medical Society had changed their requirements, or it may have been their by-laws or something, that local medical society doctors could be on the staff of local hospitals only where all doctors or surgeons in the hospital were members of the local society.

By Mr. Lewin:

Q.—That is, the District of Columbia Medical Society?

A.—Yes. That was my understanding.

THE COURT.—That answers your question, does it not, Mr. Lewin?

Mr. Lewin.—Yes, sir.

By Mr. Lewin:

Q.—I want to know whether that was one of the things the board considered when they voted as they did on November 4, that they could not make any contract or do any business with Group Health.

A.—Yes.

Q.—That is the thing they were considering?

A.—Yes.

THE COURT.—Do not ask it twice.

Mr. Richardson.—The trouble is that when he asked it the second time he changed it.

THE COURT.—I just do not want counsel to repeat.

By Mr. Lewin:

Q.—You said you went to some meeting on November 11. How do you know it was November 11?

A.—Because it happened to be Armistice night.

Q.—Where did you go to this meeting?

A.—I attended the meeting of the Medical Society at their headquarters on M Street.

Q.—How did you happen to attend? Were you a member?

A.—No. I was invited.

Q.—Who invited you?

A.—Several of the doctors.

Q.—When you went there you heard a discussion about the limitation of hospital staffs, did you?

A.—Yes. They discussed Group Health quite a lot. They were discussing this amendment that I believe was already adopted, as far as our hospital was concerned.

Q.—They were discussing this amendment that your hospital adopted?

A.—Yes, sir.

TESTIMONY OF GEORGE W. DINGLE

DIRECT EXAMINATION

By Mr. Timberlake:

George W. Dingle said he is a special agent of the Federal Bureau of Investigation, where he has been employed approximately five and a half years. He is assigned to the examination of questioned documents, which includes a comparison of known handwriting, hand printing, typewriting and mechanical impressions and other forms of document work.

He attended Indiana University, where he was granted the Bachelor of Arts, Master of Arts, and Doctor of Philosophy degrees. He has done special work in the field of document examination.

Q.—I hand you photostats, the first of which is a letter from J. Ogle Warfield to Warren Sager, the second of which is a document bearing names of various hospitals, next a list of doctors, and next those that require membership in the District Medical Society. The third is a questionnaire bearing the handwritten notation "Children's" at the top, and the next is one bearing the handwritten notation "Garfield" at the top. I ask

you if you have examined those photostats and made a comparison between the handwriting on the first one which I handed you, that is, the signature—

Mr. Richardson:—Suppose you use exhibit numbers.

Mr. Lewin:—He is entitled to proceed in any way he wants to.

Mr. Richardson:—We will see about that.

THE COURT:—As the witness is being asked concerning certain papers they should, for the purpose of the record, be identified by the numbers. I think that would help.

By Mr. Timberlake:

Q.—I hand you Government Exhibit 313, which is in evidence, and ask you if the first photostat which I handed to you is a faithful copy of that original?

A.—I think it is.

Q.—I hand you Government Exhibit 313, which is in evidence, and ask you if the second photostat which I have handed you is a faithful copy of the original?

A.—It is.

(The witness then identified a number of exhibits by the handwriting.)

Mr. Timberlake:—Now, reading from Government Exhibits 302 and 303, the questionnaire which bears the handwriting notation at the top "Garfield":

"QUESTIONNAIRE

Garfield

1. What communication or inquiry has your hospital had from Group Health Association, Inc.?

Asking to admit Pt. & physician.

2. What reply has your hospital made to Group Health Association, Inc.?

Will admit Pt. Drs. must apply for priv.

Dr. Selders has applied and will go thru routine.

3. Which, if any of the following Doctors are now members of your Medical Staff in any capacity or have privileges to practice in your hospital.

Dr. Henry Rolf Brown.

Dr. R. Stephen Hulburt.

Dr. Allan E. Lee. Yes.

Dr. Raymond E. Selders.

Dr. Mario Scandiffo.

Dr. Edmund D. Wells.

4. Is your hospital in sympathy with the policies of The Medical Society of D. C.?

Yes.

5. Is the entire Medical Staff of your hospital reappointed annually?

Yes.

6. Are appointments to the Medical Staff of your hospital approved by The Medical Staff?

Recommended by Med. Staff.

7. What governing body of your hospital finally makes appointments to the Medical Staff?

Bd. of Directors.

8. Does your hospital require membership in the Medical Society of D. C. as a qualification for appointments to its Medical Staff?

Yes or have applied.

9. What percentage of the entire medical staff of your hospital are members of the Medical Society of D. C.?

Over 75%—All recent appointments.

10. Does your hospital require membership in the A. M. A. as a qualification for appointment to its Medical Staff?

No but for appts. to staff and privileges they use form recommended by A. M. A.

11. What percentage of the entire Medical Staff of your hospital are members of the A. M. A.?

All active staff.

12. Is your hospital a beneficiary of Community Chest funds?

Yes.

13. Will you kindly make any other inquiry that you think might be pertinent at this time?"

Mr. Richardson:—They were all signed by Warfield?

Mr. Kelleher:—Warfield represented Garfield for the committee.

Mr. Timberlake:—I will read Government Exhibit 308:

"QUESTIONNAIRE

Children's

1. What communication or inquiry has your hospital had from Group Health Ass., Inc.?

Requesting admission of pts. and privileges for Dr. Selders.

2. What reply has your hospital made to Group Health Association, Inc.?

Will admit pts. & Drs. must make regular application.

3. Which, if any of the following Drs. are now members of your Medical Staff in any capacity or have privileges to practice in your hospital? None."

After the name of Dr. Mario Scandiffo there is the handwriting notation:

"Resignation accepted."

"4. Is your hospital in sympathy with the policies of The Medical Society of D. C.?

Yes.

5. Is the entire Medical Staff of your hospital reappointed annually?

Yes.

6. Are appointments to the Medical Staff of your hospital approved by The Medical Staff?

Yes—recommended.

7. What governing body of your hospital finally makes appointments to the Medical Staff?

Bd. of Directors.

8. Does your hospital require membership in the Med. Soc. of D. C. as a qualification for appointments to its Medical Staff?

Yes.

9. What percentage of the entire medical staff of your hospital are members of the Medical Society of D. C.?

100%.

10. Does your hospital require membership in the A. M. A. as a qualification for appointment to its Medical Staff?

No.

11. What percentage of the entire Medical Staff of your hospital are members of the A. M. A.?

Probably majority.

12. Is your hospital a beneficiary of Community Chest funds?

Yes.

13. Will you kindly make any other inquiry that you think might be pertinent at this time?"

TESTIMONY OF EDNA H. TREASURE

DIRECT EXAMINATION

By Mr. Lewin:

Mrs. Edna H. Treasure has been Superintendent, National Homeopathic Hospital, for three years.

(She identified roster of the hospital and minutes of the staff meetings.)

"May 17, 1938.

"The regular meeting of the Executive Staff was held at 12:30 p. m. in the Superintendent's office, Dr. Sappington presiding.

"Applications for courtesy staff memberships were considered and approved for:

"Dr. Hyder—Normal OB-medicine, anesthesia.

"Dr. Verlin E. Miles—Normal OB medicine.

"Recommendation was made that applications be approved, with the understanding that continuous service on the courtesy staff be contingent upon affiliation with only those associations approved and recognized by the Dis. Medical Society.

"A motion was made by Dr. Custis that notice of the above action be sent to all hospitals and the D. M. S." It is signed "E. Treasure."

CROSS EXAMINATION

By Mr. Leahy:

Q.—I am now handing you Exhibit 451 and will ask you to look at the first page of it. Would you say those were the doctors that constituted the Executive Staff?

A.—At that time Dr. Elward was not.

Q.—Do you know who was there in his place?

A.—Dr. Claude Moore.

Q.—So the Executive Staff at that time consisted of Dr. W. P. Baker, Dr. J. H. Branson, Dr. Tomas Cajigas, Dr. J. B. G. Custis, Dr. J. F. Davidson, Dr. Claude Moore, Dr. Bernard Notes, Dr. E. F. Sappington, Dr. J. P. Shearer, Dr. W. C. Sterling and Dr. C. F. Warner. Is that right?

A.—That is right.

Mr. Timberlake:—Before the next witness comes in I would like to offer in evidence Exhibit 470, which was produced from the files of the Georgetown University Hospital, being a letter dated Dec. 2, 1937, from Dr. Conklin to the Chief of Staff. The signature of Dr. Conklin can be compared with a number of exhibits which are in evidence.

(Letter dated Dec. 2, 1937, from Conklin to Chief of Staff, Georgetown University Hospital, was marked U. S. Exhibit No. 470 and received in evidence.)

TESTIMONY OF JUNE M. GRUBB

DIRECT EXAMINATION

By Mr. Timberlake:

June M. Grubb has been secretary to Dr. Dardinski for five months. She identified his signature.

TESTIMONY OF BENJAMIN B. SANDIDGE

DIRECT EXAMINATION

By Mr. Allen:

Benjamin B. Sandidge has been during the period from Jan. 1, 1937, to Dec. 30, 1938, Superintendent of Emergency Hospital.

As part of his duties he attended Executive Staff meetings. He identified minutes of the meetings; also correspondence with Drs. Allen Lee, Gist, Blair, Aspinwall and Conklin, and the annual report of Emergency Hospital.

(Counsel for both sides approached the bench and conferred with the court.)

(To be continued)

MEDICAL LEGISLATION

MEDICAL BILLS IN CONGRESS

Bills Introduced.—H. R. 3738, introduced by Representative Haines, Pennsylvania, proposes to establish a Chiropody Corps in the Medical Corps of the United States Army. Appointments in this corps will be made in the grade of first lieutenant, it is proposed, and officers of the corps will be promoted to the grade of captain after three years' service, to the grade of major after twelve years' service, to the grade of lieutenant colonel after twenty years' service and to the grade of colonel after twenty-six years' service. H. R. 3790, introduced by Representative May, Kentucky, proposes to authorize the appointment of female dietitians and female physical therapy aids in the Medical Department of the Army.

DISTRICT OF COLUMBIA

Bill Introduced.—H. R. 3871, introduced by Representative Burdick, North Dakota, proposes to make it a misdemeanor for any person to experiment or operate in any manner whatsoever on any living dog in the District of Columbia, for any purpose other than the healing or curing of the dog.

STATE MEDICAL LEGISLATION

Arizona

Bill Introduced.—H. 178 proposes to enact a separate osteopathic practice act and to create an independent board of osteopathic examiners to examine and license applicants for licenses to practice osteopathy. The bill defines "osteopathy" as "that system of treatment and healing of abnormalities of the human mind and body by manipulation, medicine and surgery, as taught and practiced in the standard colleges of osteopathy." The bill proposes that osteopaths shall "have equal rights and privileges with physicians and surgeons of other schools of medicine relative to the treatment of cases and the holding of public office or position."

Arkansas

Bills Introduced.—S. 249 proposes to authorize the compulsory sexual sterilization of inmates of state institutions who would be likely if released without sterilization to procreate offspring with a tendency to serious physical, mental or nervous disease or deficiency. H. 587, to supplement the medical practice act, proposes to require all licentiates of the State Medical Board of the Arkansas Medical Society to register annually on or before July 1 with the board and at that time to pay such registration fees as may be fixed by the board.

Georgia

Bill Introduced.—S. 152 proposes in effect to authorize courts to enjoin the unlicensed practice of medicine and other professions and vocations.

Indiana

Bills Introduced.—H. 315 proposes to authorize the establishment and operation by the state of a hospital for the care and treatment of crippled children, including children afflicted with infantile paralysis. H. 443 proposes to enact a separate naturopathic practice act and to create an independent board of examiners in naturopathy to examine and license applicants for licenses to practice naturopathy. H. 459 proposes to authorize the organization of corporations not for profit to operate nonprofit hospital service plans whereby hospital care is provided by any hospital or group of hospitals with which such corporations have contracts to members of the public who become subscribers to such hospital service plans.

Kansas

Bill Introduced.—H. 286, to amend the osteopathic practice act, proposes, under the purported guise of aiding the national defense, to permit licensed osteopaths to practice operative surgery and obstetrics and to administer antiseptics, anesthetics, narcotics and biologicals.

Minnesota

Bill Introduced.—H. 756 proposes to authorize the chief administrative officer of any public or private hospital, with the consent of its board of directors, to cause to be transferred and recorded on photographic film any or all of the original files and records of the hospital dealing with case history, physical examination and daily hospital records, including any miscellaneous documents, papers and correspondence in connection therewith. Such photographic films shall have the same force and effect when offered in evidence as the original records from which they were made.

Nevada

Bill Introduced.—A. 117 proposes that every physician attending a pregnant woman during gestation for conditions relating to pregnancy shall make such examination, including a standard serologic test, as may be necessary for the discovery of syphilis. The physician is to take or cause to be taken a sample of her blood at the time of the first examination and is to submit that sample to a qualified laboratory for a standard serologic test for syphilis.

New Mexico

Bill Introduced.—H. 211 proposes, in effect, to permit any practitioner of the healing art to attend and treat patients in any governmental hospital or any privately owned hospital receiving any portion of its funds, provided only that the patient requests the attendance of such practitioner and that the practitioner is licensed to practice the healing arts which he is called on to administer.

Oklahoma

Bill Passed.—Senate Committee Substitute for S. 52 passed the Senate February 27 proposing to prohibit the retail sale and distribution of veronal, barbital, nembutal, sodium amytal, chloralhydrate, bromidia, sulfanilamide, sulfapyridine, sulfathiazole, thyroid gland, benzedrine or amphetamine preparations, or compounds or derivatives of any of the foregoing drugs except on the original written prescription of a licensed practitioner of medicine, dentistry or veterinary medicine.

Texas

Bills Introduced.—H. J. Res. 15 proposes an amendment to the state constitution under which the counties, on a vote as a majority of the resident property tax paying voters, could authorize a tax not to exceed 25 cents on the one hundred dollar valuation to construct and maintain public free hospitals. H. 459 proposes to enact a separate chiropractic practice act and to create an independent board of chiropractic examiners to examine and license applicants for licenses to practice chiropractic. The bill proposes to define chiropractic to be "the Science of Palpating and adjusting the articulations of the human spinal column." Licensed chiropractors are to be entitled to practice chiropractic as defined and are to be subject to all rights, disabilities, limitations and restrictions of other licensed health practitioners.

Utah

Bill Introduced.—H. 143 proposes to grant to a hospital treating an injured person a lien on the cause of action, suit, claim or demand accruing to the injured person by reason of his injuries.

Vermont

Bills Introduced.—S. 71 proposes to require a practitioner of medicine and surgery attending a pregnant woman to take a sample of her blood prior to the third month of gestation and to submit the sample to a laboratory approved by the state board of health for a standard serologic test for syphilis. H. 204 proposes that a child over 6 years of age shall not be received into a public or private school unless vaccinated for smallpox.

Washington

Bill Introduced.—S. 317 proposes to enact a separate sanipractic practice act and to require the governor to appoint a committee to be known as the "Sanipractic Physicians' Examina-

ing Board of Washington" to examine and license applicants for licenses to practice sanipractic. The bill states that "Sanipractic is the science and art of applied prophylactic and therapeutic sanitation, which enables the physician to direct, advise, prescribe or apply food, water, roots, herbs, light, heat, exercises active and passive, manipulation, adjusting tissue, vital organs

and anatomical structure by manual, mechanical or electrical instruments or appliances; or other natural agency, to assist nature restore a psychological and physiological interfunction for the purpose of maintaining a normal state of health in mind and body. Above definition copyrighted 1919 for the purpose of protecting a separate and coordinate principle of healing."

OFFICIAL NOTES

RADIO BROADCASTS

"Doctors at Work" is the title of the sixth annual series of dramatized radio programs being presented by the American Medical Association and the National Broadcasting Company.

The program is scheduled for 10:30 p. m. eastern standard time (9:30 central, 8:30 mountain, 7:30 Pacific time) over the Blue network, other N. B. C. stations and Canadian stations.

Descriptive posters for local distribution may be had gratis from the Bureau of Health Education, American Medical Association, 535 North Dearborn Street, Chicago. Program titles

will be announced weekly in *THE JOURNAL* and monthly in *Hygeia*, the Health Magazine.

Tickets are available for each broadcast. Address the Bureau of Health Education, American Medical Association, 535 North Dearborn Street, Chicago. Tickets are free, but a stamped self-addressed envelop should accompany requests.

The next three programs to be broadcast, together with their dates and titles, are as follows:

March 19. First Line of Defense.
March 26. Health for the Workman.
April 2. Invisible Invaders.

WOMAN'S AUXILIARY

WINNERS IN THE HYGEIA CONTEST

The American Medical Association offered \$400 in cash prizes to the state and county auxiliaries which obtained the largest number of subscription credits to *Hygeia*. The contest covered the period from Sept. 1, 1940, to Jan. 31, 1941.

Cash prizes were awarded as follows:

Group 1. Auxiliaries with a membership of from one to thirteen:

First prize, \$40, to Cass County, Mo., Mrs. David S. Long, secretary-treasurer, Harrisonville, Mo.

Second prize, \$25, to Childress-Collingsworth-Hall counties, Texas, Mrs. E. W. Moss, Hygeia chairman, Wellington, Texas.

For the third prize, \$15, no county qualified by sending twenty-five subscriptions.

Group 2. Auxiliaries with a membership of from fourteen to twenty-three:

First prize, \$40, to Chelan County, Wash., Mrs. N. M. Bellas, Hygeia chairman, Wenatchee, Wash.

Second prize, \$25, to Baldwin County, Ga., Mrs. C. H. Richardson, president, Milledgeville, Ga.

Third prize, \$15, to Kern County, Calif., Mrs. Eric Colby, Hygeia chairman, Bakersfield, Calif.

Group 3. Auxiliaries with a membership of from twenty-four to forty-two:

First prize, \$40, to Vermilion County, Ill., Mrs. Holland Williamson, Hygeia chairman, Danville, Ill.

Second prize, \$25, to Bowie-Miller County, Ark., Mrs. Ralph Cross, Hygeia chairman, Texarkana, Ark.

Third prize, \$15, to Walla Walla Valley, Wash., Mrs. J. W. Ingram, Hygeia chairman, Walla Walla, Wash.

Group 4. Auxiliaries with a membership of from forty-three to five hundred and ninety-five.

First prize, \$40, to Buchanan County, Mo., Mrs. Charles H. Werner, Hygeia chairman, St. Joseph, Mo.

Second prize, \$25, to Cook County, Ill., Mrs. Clyde Landis, Hygeia chairman, Chicago.

Third prize, \$15, to Westmoreland County, Pa., Mrs. I. J. Ober, Hygeia chairman, Greensburg, Pa.

State winners:

First prize, \$40, to state of Illinois, Mrs. E. M. Egan, Hygeia chairman, Chicago.

Second prize, \$25, to state of Washington, Mrs. Martin Norgore, Hygeia chairman, Seattle.

Third prize, \$15, to state of Missouri, Mrs. Charles H. Werner, Hygeia chairman, St. Joseph.

Honorable Mention was given to the following counties:

Weld County, Colo., Mrs. Theodore E. Heinz, chairman, Greeley.

Duval County, Fla., Mrs. Raymond H. King, chairman, Jacksonville.

Sangamon County, Ill., Mrs. J. E. Reisch, chairman, Springfield.

Will-Grundy County, Ill., Mrs. Bernard Klein, chairman, Joliet.

Dubuque County, Iowa, Mrs. Walter Cary, chairman, Dubuque.

Sedgwick County, Kan., Mrs. Frank Emery, chairman, Wichita.

Park Region Auxiliary, Minnesota, Mrs. W. O. B. Nelson, chairman, Fergus Falls.

Berks County, Pa., Mrs. Clarence E. Goode, chairman, Reading.

Crawford County, Pa., Mrs. J. R. Gingold, chairman, Meadville.

Jefferson County, Texas, Mrs. G. B. Stephenson, chairman, Beaumont.

Kerr-Kendall-Gillespie-Bandera counties, Texas, Mrs. Sam E. Thompson, chairman, Kerrville.

Yakima County, Wash., Mrs. Delmar Bice, chairman, Yakima.

Other counties that have made or exceeded their quota were:

Washington County, Ark.; Riverside County, Calif.; Logan County, Ill.; Shawnee County, Kan.; Greene County, Mo.; Jackson County, Mo.; LaFayette County, Mo.; Cayuga County, N. Y.; Polk Marion County, Ore.; Bucks County, Pa.; Lebanon County, Pa.; Salt Lake County, Utah; Clark County, Wash.; Cowlitz County, Wash.; King County, Wash.; Kitsap County, Wash.; Pierce County, Wash.; Kenosha County, Wis.; Portage County, Wis.; Racine County, Wis.; Rock County, Wis.; Washington County, Wis.

The final result in this year's contest was eight thousand four hundred and eighty subscriptions.

To the Hygeia chairmen, officers and members of the various county and state woman's auxiliaries who have assisted in making this contest a success, Mrs. W. J. Wanninger, national Hygeia chairman, and the circulation manager of *Hygeia* express appreciation.

Medical News

(PHYSICIANS WILL CONFER A FAVOR BY SENDING FOR THIS DEPARTMENT ITEMS OF NEWS OF MORE OR LESS GENERAL INTEREST: SUCH AS RELATE TO SOCIETY ACTIVITIES, NEW HOSPITALS, EDUCATION AND PUBLIC HEALTH.)

ALABAMA

The Nutrition Clinic at Birmingham.—In 1937 the department of internal medicine of the University of Cincinnati, the director of which is Dr. Marion A. Blankenhorn, started a clinic in nutrition in Birmingham at the invitation of the staff of the Hillman Hospital, and the clinic has operated since then each summer during the season when pellagra is prevalent. During the last season, which ended in November, 1,729 persons with deficiency disease were studied and treated. Last summer departments of seven additional separate colleges sent investigators or teams of workers mainly to do biochemical, bacteriologic, neurologic and psychiatric studies. These were the Ohio State University Department of Bacteriology, Iowa State University Department of Pathology and Neurology, University of Texas Department of Chemistry, University of Wisconsin Department of Biochemistry, Washington University Department of Medicine, University of California Department of Experimental Biology, University of Cincinnati Departments of Ophthalmology and Psychiatry, and Carleton College Department of Chemistry. The clinic is housed in a new clinic and laboratory building built by Jefferson County with federal aid, and the laboratories were equipped by the Jefferson County commissioners. The budget of the clinic last year was about \$56,000, not counting the outlay made by the various collaborators, and for the coming season the clinic will be aided by a grant of \$37,500 from the National Foundation for Infantile Paralysis, Inc., to study the relation of nutrition to infectious diseases. The first season at the clinic was financed by the University of Cincinnati and Western Reserve University, Cleveland. Subsequent seasons have been financed with aid from the Rockefeller board, the Macy Fund and the Markle Foundation, and by various private corporations interested in nutrition.

CALIFORNIA

Annual Report of Blood Bank.—During the first year of operation of the blood bank at San Francisco Hospital, San Francisco, blood was taken from 1,747 persons and transfusions were given to 1,670. According to a report 48, or 2.7 per cent, of the total 1,747 blood samples taken showed a positive Wassermann reaction; 12, or 0.6 per cent, showed a history of malaria; less than 0.5 per cent of the specimens drawn were not used because of the unsatisfactory condition of the blood, and only 165, or 10 per cent, of recipients showed any reactions; no deaths resulted from transfusions. After one year of operation of the blood bank it is possible to give about one hundred and seventy blood transfusions a month, whereas previously it was possible to give an average of about forty transfusions. Prior to the establishment of the bank, the department of public health paid for most of the transfusions at a cost of \$25 a donor. With the inauguration of the service only about \$100 a month was paid by the department during the calendar year 1940 for professional blood donors. These donors were used in the few cases in which the blood types required were not available at the time in the storehouse of the blood bank.

CONNECTICUT

Dr. Francis Blake Appointed Dean at Yale.—Dr. Francis G. Blake, Sterling professor of medicine, Yale University School of Medicine, New Haven, and acting dean since the retirement of Dr. Stanhope Bayne-Jones on July 1, 1940, has been made dean, effective July 1. Dr. Blake joined Yale's faculty as John Slade Ely professor of medicine in 1921 and served with that title until 1927, when he became Sterling professor.

Hospital Districts for Mental Patients.—Connecticut has been divided into three districts to take care of mental patients throughout the state. Classified by the state board on hospital districts, established under the 1939 supplements to the general statutes, cities and towns throughout the state have been grouped in districts so that mental commitments may be directed to three state hospitals: Connecticut, Norwich and Fairfield. A provision has been made for changes in the districts twice yearly if necessary and will be made whenever the

experience of the preceding six months indicates there have been unequal admission rates to the hospitals. The state board on hospital districts is also prepared to consider at its regular meetings requests for adjustments of the district, according to the state medical journal.

GEORGIA

Surgical Meeting of Railway Groups.—The Surgical Association of the Atlanta and West Point Railroad Company, the Western Railway of Alabama and the Georgia Railroad will be held at the Atlanta Biltmore, Atlanta, March 20. The following program will be presented:

- Dr. William W. Young, Atlanta, Importance of the Personality Aspect of Railroad Employees.
- Dr. Floyd W. McRae, Atlanta, Significance of Abdominal Pains.
- Dr. Gordon B. Myers, Detroit, Clinical Experience with Sulfathiazole.

Following a round table discussion and luncheon, Dr. Hugh M. Lokey, Atlanta, president of the association, will present his official address on "Eye Symptoms Associated with General Diseases."

IDAHO

Personal.—Dr. Anton C. Sibilsky, formerly of Laurium, Mich., has been appointed in charge of the North Central Idaho health unit, succeeding Dr. Hugh F. Stanton.

Society News.—Dr. Raphael C. McDonough, Spokane, Wash., discussed "Treatment of Skin Diseases" before the North Idaho District Medical Society in Lewiston, January 15. —The South Side Medical Society was addressed at Twin Falls, January 21, by Drs. Thomas M. Joyce, Portland, on appendicitis and Laurence Selling, Portland, rupture of the intervertebral disk. They discussed similar subjects before the Southwestern District Medical Society in Boise on January 20.

MASSACHUSETTS

Dr. Gordon Named Liaison Officer with British Ministry of Health.—Dr. John E. Gordon, professor of preventive medicine and epidemiology, Harvard Medical School, Boston, and now in charge of the Red Cross-Harvard University Hospital recently established in England, has been appointed United States liaison officer with the British Ministry of Health, according to *Science*. The appointment was made on the invitation of Malcolm Macdonald, then minister of health.

Dr. Salter Goes to Yale.—Dr. William T. Salter, assistant professor of medicine at Harvard Medical School, Boston, has been appointed professor of pharmacology at Yale University School of Medicine, New Haven, effective July 1. A native of Boston, Dr. Salter graduated in medicine at Harvard in 1925. Completing his medical residency at Massachusetts General Hospital, he was Moseley Traveling Fellow and research fellow in medicine for Harvard from 1928 to 1929, when he became tutor in the biochemical sciences. He has been assistant professor since 1935 and research fellow in biochemistry of the Harvard Cancer Commission since 1929. Dr. Salter has written numerous scientific papers along the lines of his research.

MINNESOTA

The Jackson Lecture.—Carl R. Moore, Ph.D., professor and chairman of the department of zoology, University of Chicago, will present the annual Clarence Martin Jackson Lecture in Minneapolis, March 19, on "The Significance of Hormones in Embryonic Sex Differentiation." The Jackson lectureship was established in 1933 by Phi Beta Pi fraternity in honor of Dr. Clarence M. Jackson, professor and head of the department of anatomy at the University of Minnesota Medical School, Minneapolis, since 1913.

NEW JERSEY

Society News.—Drs. Thomas H. Cherry, New York, addressed the Hudson County Medical Society, Jersey City, February 4, on office gynecology. —Dr. Herbert T. Kelly, Philadelphia, addressed the Cumberland County Medical Society, Bridgeton, February 11, on "Newer Concepts in the Treatment of Diabetes." —Dr. Walter I. Lillie, Philadelphia, addressed a stated meeting of the Academy of Medicine of Northern New Jersey, Newark, February 20, on "Fundamental Changes Associated with Arterial Hypertension." Drs. Edward D. Churchill, Boston, and Charles F. Bove, New York, discussed "War Wounds and Injuries of the Chest" at a meeting of the acad-

emy's section on medicine and pediatrics in conjunction with the lung committee of the Essex County Medical Society, February 11.—Dr. George R. Minot, Boston, addressed the Essex County Medical Society, Newark, February 13, on "Etiology, Diagnosis and Treatment of the Anemias."—Speakers at a meeting of the Camden County Medical Society, Camden, February 4, were Drs. Hyman I. Goldstein, Camden, on "Interesting Cases of Ulcer of the Stomach"; Paul M. McCray Jr., Camden, "Multiple Polyposis of the Colon," and Norman M. Scott, Trenton, "Medical Service Administration Plan."—Dr. Harold E. B. Pardee, New York, addressed the Passaic County Medical Society, Paterson, February 13, on "Management of Patients with Rheumatic Fever, Particularly in Regard to Cardiac Complications," and Dr. Norman M. Scott, Trenton, "Medical Service Administration."

NEW YORK

Courses for County Societies.—The council committee on public health and education of the Medical Society of the State of New York has arranged several courses for county societies to continue through the spring at intervals of one or two weeks. A course on traumatic surgery is being presented for the Fulton County Medical Society at Gloversville and Johnstown alternately on Fridays from February 21 to April 4. Dr. William S. Ladd arranged a course on general medicine for the Tompkins County society that is being given in Ithaca between March 3 and May 5. A course in general medicine was arranged by Dr. Albert F. R. Andresen, Brooklyn, with speakers from Long Island College of Medicine on alternate Thursdays from March 27 to May 22 for the Columbia County society at Hudson. Dr. Andresen arranged a similar course for the Otsego County society at Oneonta on the second Tuesday of each month from March to June. The Wayne County society is having a course on general medicine in Newark and Lyons alternately on alternate Tuesdays, February 4 to April 15, partly in cooperation with the state department of health. A course in general medicine is also being presented for the Genesee County society on six Tuesdays from February 18 to May 6. Dr. Clayton W. Greene, Buffalo, arranged a course on "Treatment of Common Diseases" for the Schenectady County Medical Society in Schenectady from March 5 to April 9. A group of three lectures on traumatic surgery arranged by Dr. Henry H. Ritter, New York, was presented in Oneida on Wednesdays beginning January 29, and four miscellaneous lectures in later successive weeks were planned in cooperation with the state department of health. A sanitation symposium was presented before the Oswego County Medical Society, Oswego, January 29, with addresses on milk and water supplies by members of the staff of the division of sanitation of the state health department, stressing emergency procedures in case of catastrophe.

New York City

Centennial Celebration.—The sixth annual alumni day of the New York University College of Medicine will be held, March 22, as part of the centennial celebration of the college. A dinner will be held Friday evening, March 21, at the Hotel Roosevelt with the following speakers: Harry Woodburn Chase, Ph.D., chancellor of the university; W. Somerset Maugham, author, and James Rowland Angell, Ph.D., former president of Yale University and now educational director of the National Broadcasting Company. The scientific program at the college will include the following speakers, all members of the faculty:

- Dr. John H. Mulholland, Is There a Surgical Solution for Hypersensitivity of the Carotid Sinus?
- Dr. Emery A. Rovenstine, An Approach to the Problem of Management Presented by the Patient in Coma.
- Dr. Karl M. Bowman, What Is the Present Status of the Shock Treatment in Schizophrenia?
- Dr. William S. Tillett, Role of Specific Antipneumococcus Immunity in Patients with Pneumonia Treated with Sulfonamide Compounds.
- Dr. Howard C. Taylor Jr., What Is the Basis for Rational Endocrine Therapy in Gynecologic Conditions?

There will be a luncheon Saturday at which the speakers will be Drs. Samuel A. Brown, dean emeritus of the college; Currier McEwen, present dean, and Nathan B. Van Etten, President of the American Medical Association. Dr. Luther B. MacKenzie is president of the alumni association and Dr. Marshall S. Brown Jr., secretary. New York University College of Medicine was formed in 1841 as the University of the City of New York Medical Department and retained that title until 1896, when it adopted the title New York University Medical College. The latter name was used until 1898, when the school merged with Bellevue Hospital Medical College.

From that time until 1935 the school was known as University and Bellevue Hospital Medical College.

Building for Health Museum.—The former Masterpieces of Art building in Flushing Meadow Park will be remodeled to meet more fully the demands of its use as the permanent home of the American Museum of Health, it was announced at the recent annual meeting of the museum. A tower of steel and glass will be added, and a façade of glass brick with a large raised mural emblazoned over the entrance will give the building a more attractive appearance, it was said. Offices for the museum staff will be provided. The building will be opened to the public early in the summer. The formation of a scientific advisory board to insure accuracy of exhibits to be displayed, with Dr. Haven Emerson as chairman, was also announced at this meeting.

OKLAHOMA

Cancer Clinic at University Hospital.—A cancer clinic was recently organized at the University Hospital, Oklahoma City, with eleven members of the hospital staff in charge. The physicians will meet the first and third Thursdays in each month to study difficult cases. They also plan to conduct special investigations. The staff includes Drs. William E. Eastland, Cyril E. Clymer, Herbert Dale Collins, Rufus Q. Goodwin, Elmer R. Musick, John H. Lamb, Everett S. Lain, Hugh G. Jeter, Paul C. Colonna, Joseph W. Kelso and Alfred J. Ackermann.

Society News.—The council of the Oklahoma State Medical Association has approved the formation of a new section on neurology, psychiatry and endocrinology, which will present its first program at the next annual meeting of the association. Dr. David W. Griffin, Norman, is chairman of the new section; Dr. Harry Wilkins, Oklahoma City, vice chairman, and Dr. Coyne H. Campbell, Oklahoma City, secretary.—Dr. Alonzo C. McFarling, Shawnee, addressed the Pottawatomie County Medical Society, Shawnee, February 15, on "Interstitial Keratitis."—Dr. Basil A. Hayes, Oklahoma City, addressed the February meeting of the Garfield County Medical Society, Enid, on "Relationship of Urologic Lesions to Nephritis and Hypertension."

OREGON

Postgraduate Session and Sommer Lectures.—The annual Alumni Postgraduate Session and the Ernst A. Sommer Memorial Lectures of the University of Oregon Medical School, Portland, will be given, March 17-21, in the auditorium and library of the school. The memorial lectures will be presented by Drs. William S. Middleton, Madison, Wis., and Donald Guthrie, Sayre, Pa. Two of the lectures will be presented at morning meetings of the postgraduate session and two at evening meetings. Dr. Guthrie will speak on "Diagnosis of Cancer of the Breast and Its Surgical Management" and "Diagnosis of Diseases of the Thyroid Gland," Dr. Middleton on "Further Rationalized Therapeutic Experiences" and "Infectious Arteritis." In addition, Dr. Guthrie and Dr. Middleton will speak at luncheon round tables on "The Acute Surgical Abdomen" and "Cardiac Emergencies" respectively. The morning sessions will be devoted to lectures in the fields of surgery and gynecology, medicine and pediatrics, and eye, ear, nose and throat. Afternoons are arranged so that physicians may gather in small groups for instruction in clinics, hospitals and laboratories. Class reunion dinners will be held the first evening and the annual banquet Thursday evening, March 20, at the Multnomah Hotel.

PENNSYLVANIA

Special Society Organized.—Physicians specializing in eye, ear, nose and throat diseases from the counties surrounding Harrisburg recently formed the Central Pennsylvania Eye, Ear, Nose and Throat Society, with Drs. George F. Gracey, Harrisburg, as president and Forney P. George, Harrisburg, as secretary. The society will hold meetings the second Thursday of February, April, June, October and December.

Philadelphia

Annual Postgraduate Institute.—The Philadelphia County Medical Society will present its sixth annual Postgraduate Institute at the Bellevue-Stratford Hotel, March 31 to April 4. The institute will consist of more than seventy-five lectures on modern therapy given by physicians associated with the medical schools and hospitals of Philadelphia. Dr. Rufus S. Reeves is director of the committee in charge of arrangements for the institute.

Society News.—Speakers before the Philadelphia Pediatric Society, January 14, were Drs. John H. Stokes, on "Some of the Applications of Fundamental Principles to the Eczema Complex in Infants and Children"; Carroll S. Wright, "Nevi in Children and Their Treatment," and Clarence S. Livingood, "Fungal Infections in Childhood."—The New York and Philadelphia chapters of the National Gastroenterological Association held a meeting in Philadelphia, January 16, with the following speakers: Drs. Anthony Bassler, New York, on "Recent Advances in Gastroenterology"; Samuel Weiss, New York, "Recent Advances of Hepatic Function Tests," and Edward L. Bortz, Philadelphia, "Therapeutic Use of Cholesterol Ester Sol in Infectious and Toxic Diseases."—Drs. Clare C. Hodge and Kenneth E. Fry addressed the Philadelphia Academy of Surgery, February 3, on "Ambulatory Treatment of Fractures of the Leg and Foot by Means of the Skate Type of Walking Iron."

RHODE ISLAND

Society News.—Dr. Gordon J. McCurdy addressed the Providence Medical Association, March 3, on "Endaural Mastoid," and Comdr. Charles L. Oliphant, Naval Torpedo Station, Newport, on "Industrial Medicine." A symposium on chemotherapy was presented at a meeting of the association, February 3, by Drs. Howard K. Turner, Providence, speaking on infections of the genitourinary tract; Morgan Cutts, Providence, pulmonary infections; Kalei K. Gregory, Providence, meningococcal infections, and Champ Lyons, Boston, osteomyelitis and compound fractures.

TENNESSEE

Meharry Seeks Endowment Fund.—Meharry Medical College, Nashville, is making a campaign to raise more than two million dollars for an endowment fund. The General Education Board, which has been contributing toward the annual operating budget of the college, has announced that it will not continue this subsidy after this year, it is reported. The board has offered conditionally, however, to make endowment grants totaling \$3,700,000 if the college will obtain \$1,700,000 from other sources. Of this amount \$1,500,000 must be raised by July 1. The college has a current endowment of about \$800,000. A large committee of prominent persons representing medical, educational and journalistic activities is sponsoring the campaign, and Abraham Flexner, Ph.D., Princeton, N. J., is national chairman of the endowment program.

GENERAL

Agency Wants Man Charged with Murder.—Jesse C. Byrum, alias "Big Red," believed to be seeking private treatment for tuberculosis, is wanted by Pinkerton's National Detective Agency. He formerly received treatment in the federal hospitals as a war veteran but became aware that the hospitals were asked to be on the lookout for him. Byrum's description is given as follows: Age, 40 (1937); height, 6 feet 2½; weight, 170 pounds; eyes, blue; hair, auburn; speaks with Southern accent. He is reported to frequent gambling and bookmaking resorts and to be an opium smoker. Physicians who may be approached by Byrum for treatment are asked to notify their local police authorities at the expense of Pinkerton's National Detective Agency, Inc.

WPA Health Program to Be Expanded.—An expansion and redirection of all community service programs of the Works Projects Administration toward activities related to home defense will include widening of the public health program, according to an announcement. Training of as many as fifty thousand persons in the next twelve months as ward attendants, orderlies and hospital aides capable of giving simple bedside care will be one feature of the program. At present the public health program is devoted to assisting public hospitals, clinics and sanatoriums. The school lunch program, which now provides hot lunches for approximately two million school children, as well as the gardening and food preservation projects, will also be strengthened, it was said.

New Journal on Cancer.—The first issue of *Cancer Research*, a monthly journal of articles and abstracts on cancer research, made its appearance in February. The publication plans to make information available to laboratory workers, clinicians and all persons concerned with the attack on malignant disease. It is sponsored by the American Association for Cancer Research, the Anna Fuller Fund, the International Cancer Research Foundation and the Jane Coffin Childs Memorial Fund for Medical Research. The journal will be managed by an advisory board composed of representatives of

each of these groups. The subscription price to members of the association for cancer research will be \$5, and for those who are not members and for institutions and libraries the rate will be \$7. Dr. Alexander Vaughn Winchell is the business manager, with offices at 1620 Lincoln-Liberty Building, Philadelphia. Dr. Stanhope Bayne-Jones is secretary of the editorial committee, 333 Cedar Street, New Haven, Conn. The first issue contains thirteen original articles and two hundred and forty-one abstracts of papers published in the latter half of 1940.

Pan-American League Against Cancer.—Announcement was made, February 28, of the formation of the Pan-American League Against Cancer, incorporated under the laws of New York. Dr. Francis Carter Wood, emeritus director of the Institute of Cancer Research, Columbia University College of Physicians and Surgeons, New York, was head of the organizing committee and Dr. Angel H. Roffo, director of the Institute of Experimental Medicine, Buenos Aires, will be president of the new league. The organizing committee included, among others:

Dr. Antonio C. Fontes, director of the Instituto Oswaldo Cruz, Rio de Janeiro, Brazil.
Dr. Fernando Ocaranza, president of the Mexican League Against Cancer, Mexico, D. F.
Dr. Emilio Martinez, president of the Cuban League Against Cancer, Havana.
Dr. José V. Huertas, director of the National Institute of Radium, Bogotá, Colombia.
Dr. Juan Jose Mostajo, director of the Institute of Cancer, Lima, Peru.
Dr. Mario Lujan, secretary of health, San Jose, Costa Rica.
Dr. Leon Rulk, director-general, National Service of Hygiene and Public Welfare, Port-au-Prince, Haiti.
Dr. Carlos Butler, director of the Institute of Cancer, Montevideo, Uruguay.

Among the incorporators of the league are:

Mr. Winthrop W. Aldrich, chairman, board of directors of the Chase National Bank, New York.
Major Gen. James G. Harbord, chairman, board of directors, Radio Corporation of America, New York.
Frank B. Jewett, Ph.D., president, National Academy of Sciences, New York.
Dr. George E. Pfahler, professor of radiology, University of Pennsylvania Graduate School of Medicine, Philadelphia.
Dr. Albert Soiland, Los Angeles.
Mrs. Robert G. Mead, member of the board, New York City Committee of the American Society for the Control of Cancer.

The organization will carry on in the Western Hemisphere the scientific and social work of the International Union Against Cancer, which formerly had headquarters in Paris. The aims outlined in the articles of incorporation are to promote the fight against cancer, to coordinate study and research in the countries of the American continent and to disseminate information thereon, and to promote establishment of national organizations throughout the Western Hemisphere.

Deaths in Other Countries

Dr. Charles Thurstan Holland, Liverpool, president of the first International Congress of Radiology, held in London in 1925, died January 16.—Dr. Francis Temple Grey, an authority on legal medicine, died in London January 24, aged 54.—Sir Pendrill Varrier-Jones, founder and medical director of Papworth Village, a settlement for the care and rehabilitation of tuberculosis patients, died at Papworth, Cambridgeshire, England, January 30, aged 57.—Dr. William Bulloch, emeritus professor of bacteriology, University of London, and an original member of the Medical Research Council, under the National Insurance Act, died in London Hospital, February 11, aged 72.

Government Services

The Government Needs Physicians

The U. S. Civil Service Commission announces that applications are still being received for three grades of medical officer positions, ranging in salary from \$3,200 to \$4,600 a year for the following agencies: Public Health Service, Food and Drug Administration, Civil Aeronautics Administration, Veterans Administration and the Indian Service. An announcement was first published in *THE JOURNAL*, Sept. 21, 1940, p. 1032. The recent announcement amends the original one to add to the list of optional branches "diagnosis and treatment of cancer." Applications will be rated as received until further notice and certification made as the needs of the service require, except that if sufficient eligibles are obtained the receipt of applications may be closed, in which case due notice will be given.

Foreign Letters

LONDON

(From Our Regular Correspondent)

Jan. 18, 1941.

Hospital Coordination

There are two hospital systems in this country. The older one consists of the voluntary hospitals, so called because they are provided and supported by the voluntary subscriptions of the benevolent for the benefit of the poor. To them are attached the medical schools and therefore the vast majority of the leaders of British medicine. The other system consists of the municipal hospitals, which have developed out of the infirmaries established by the municipal authorities for the aged and infirm poor. They are thus part of our public health organization. In the past they had no status comparable to that of the voluntary hospitals but in recent years they have been much improved, with the result that we have two efficient hospital systems independent of each other. This means waste of effort and has given rise to the problem of coordination of our hospitals on a regional basis. The complete calmness and confidence with which the country faces the greatest threat to democratic civilization is shown, among many ways, by the fact that the war has not interrupted the attack on the hospital problem.

In December 1939 the automobile magnate Lord Nuffield, who is famous for his benefactions, endowed a trust with the object of promoting coordination of hospital services. The trust has set up a central regionalization and medical advisory council under the chairmanship of Sir Farquhar Buzzard. Plans for the regionalization of hospital services have been discussed in important provincial centers with representatives of the public health services and the voluntary hospitals. The minister of health, Mr. Malcolm Macdonald, has expressed approval of the work of the trust. Whatever may be the proper ultimate hospital service, he holds that we should build up from existing organizations. Both have played a great part in our hospital system in the past.

Government Decides to Fortify White Bread

The war has caused the rationing of certain imported foods because the cargo space is required for munitions and has made nutrition a national problem, in which the question of bread has come to the front. Now that the government not only controls the price of bread but also subsidizes it so as to keep the price down, it has been urged to insure that the public be supplied with wholemeal bread. In the House of Lords the minister of food, Lord Woolton, stated that he had been impressed by the unanimity of scientific opinion on the nutritive value of wholemeal bread and the obvious desire of people who were not scientists to compel everybody to eat it. Its virtues had been widely known for some time, and certain trade interests had spent large sums in advertising them. The government found that the average deliveries of all kinds of wholemeal flour did not exceed 5 per cent of the total delivery of all flour. Reckoning that 60 per cent was used for bread making, it followed that only 8 per cent of the bread used in the country was made from wholemeal. A scientific committee appointed to advise the government carefully sifted the facts. The committee stated that brown bread did not keep as well as white bread and was a less attractive food when stale. Further—and this was very important in wartime, when we must maintain reserve stocks of flour—wholemeal flour did not keep as well as white flour and would have to be turned over twice as often as white flour if it was not to go out of condition. In these circumstances he was loath to insist on the public having no choice but to eat wholemeal bread. The proper course was to secure an adequate

supply of this bread at the same price as white bread and draw attention to its advantages, while recognizing that there were people to whom, for physiologic reasons, it was not suitable.

The government had decided to fortify the white loaf. The milling industry had spent much money on research as to the best means of remedying the deficiency of white flour in vitamin B₁. Guided by its scientific advisers, the government had made arrangements for the synthetic production of vitamin B₁ but this would not be available in quantity until May 1941. It would be introduced into white bread with calcium salts, which are also deficient. In the debate which followed, it was stated by Lord Balfour, chairman of the Medical Research Council, that calcium deficiency had long been a defect in the nutrition of our people, as was shown by the defective formation of the teeth. While thinking that everybody should eat wholemeal bread, the council recognized the practical difficulties, and the government could not be a dictator.

The decision to fortify the white loaf in this way has aroused criticism. The question is asked Why remove from flour many of its valuable ingredients and then resort to a difficult process to restore only some of them? A research by Dr. Harriette Chick, published in the *Lancet*, is something of a bombshell for the government's plan. She points out that vitamin B₁ is not the only deficiency in white flour; it is also deficient in the vitamin B complex (which includes riboflavin, nicotinic acid and vitamin B₆).

The Troubles of a Medical Journal with the Lay Press

The *South African Medical Journal*, which is the organ of the South African Medical Association, has in vain tried to prevent the lay press from summarizing or quoting from its articles for purposes of review because in the present state of the law there is nothing to forbid this from being done. The *Journal* admits that some of its matter may be of interest and value to the layman and that it may be its duty to bring this material to the notice of the public, as is done by at least two medical contemporaries in England and by THE JOURNAL in America. In such cases the editor decided what should be given to the public. An example was an article sent to the lay press on the dangers of damage to the retina from looking at the sun in the recent total eclipse visible in South Africa. But in some other cases there are objections to publication in the lay press. These are generally that it is an infringement on the ethical code of the association and that excerpts, when divorced from their context, give rise to mistaken impressions, especially when they are in the nature of criticisms among the profession.

A New Use of the Stethoscope

In gratitude for his work in removing delayed action bombs which fell in the east end of London, Capt. Robert Davies, who is in command of the bomb disposal squad, has been presented with a stethoscope by the resident staff of one of the hospitals. He has frequently borrowed a stethoscope from the hospital in order to listen to the ticking of delayed action bombs before removing them.

Marriages

JOHN PHILIP COGLEY to Miss Patricia Ellen Noonan, both of Council Bluffs, Iowa, in Palm Springs, Calif., Dec. 25, 1940.

W. HUGH MISSILDINE, Des Moines, Iowa, to Miss Alice Miriam Hughes of Ames, Dec. 24, 1940.

IRWIN W. BARRETT to Miss Irma Lee Barnes, both of Clarksdale, Miss., Dec. 24, 1940.

EMIL A. FULLGRABE, Indianola, Iowa, to Miss Lois Hooper of Hartford, Dec. 24, 1940.

ALFRED G. HUENEGARDT to Miss Helen Wood, both of Los Angeles, Dec. 30, 1940.

Deaths

Charles Wallis Edmunds Ⓢ a leading member of the Council on Pharmacy and Chemistry of the American Medical Association since 1921, died, March 1, of coronary embolism at his home in Ann Arbor, Mich., aged 68.

Dr. Edmunds was born in Bridport, Dorset, England, Feb. 22, 1873 and came to the United States in 1883. He graduated from the University of Michigan Department of Medicine and Surgery, which later became the University of Michigan Medical School, Ann Arbor, in 1901. The following year he became a member of the faculty at his alma mater as assistant in pharmacology, in 1904 instructor in materia medica and therapeutics, was lecturer from 1905 to 1907 and had been professor since 1907. From 1911 to 1921 he was secretary and from 1918 to 1921 assistant dean of the faculty. He had been director of the pharmacology laboratory since 1936. In 1935 he was made a member of the executive committee of the medical school and in 1937 a member of the executive board of the graduate school. In 1937 Dr. Edmunds was selected to give the Russell lecture at the university.

At the 1940 convention Dr. Edmunds was chosen president of the United States Pharmacopeia; he had been a member of the committee on revision since 1910, member of the executive committee since 1920, second vice chairman since 1930, chairman of the antianemia products advisory board since 1935 and chairman of the committee on biologic assays since 1920. For more than ten years he had been a member of the committee on drug addiction of the National Research Council.

In 1925 he went to Geneva, Switzerland, as a member of the international committee on drug standardization of the Health Committee of the League of Nations.

In the American Medical Association Dr. Edmunds was chairman of the Section on Pharmacology and Therapeutics, 1929-1930.

CHARLES WALLIS EDMUNDS, M.D.
1873-1941

Many scientific organizations profited by his leadership. He was a past president of the American Society for Pharmacology and Experimental Therapeutics and a member of the American Physiological Society, the Association of American Physicians and the Society for Experimental Biology and Medicine. He was the author of numerous publications in his special field. With Dr. Arthur R. Cushny he wrote the well known "Laboratory Guide in Pharmacology." He revised with Prof. J. A. Gunn of Oxford, England, Cushny's textbook on "Pharmacology and Therapeutics," and he was on the editorial board of the *Journal of Pharmacology and Experimental Therapeutics* from 1907 to 1937.

By his death medicine loses a scientific contributor, an indefatigable worker, a dependable leader.

Charles Value Chapin, Providence, R. I.; Bellevue Hospital Medical College, New York, 1879; superintendent of health of Providence from 1884 to 1932; professor of physiology at Brown University from 1886 to 1896; registrar of the city of Providence from 1888 to 1932; in 1909 lecturer at Harvard Medical School, lecturer at the Massachusetts Institute of Technology School for Health Officers from 1913 to 1922 and the Harvard School of Hygiene and Public Health from 1923 to 1935; in 1913 undertook for the American Medical Association a survey of state sanitation throughout the United States; member and past president of the Rhode Island Medical Society; past president of the Providence Medical Association, and was the first president of the American Epidemiological Association; member of the American Academy of Arts and

Sciences, Royal Society of Medicine of England, and the American Public Health Association, of which he was president in 1927; was elected the first honorary member of the Delta Omega Society in 1927; member of the medical advisory board of the American Red Cross during the World War; was largely responsible for the establishment of the Providence City Hospital, which later changed its name to the Charles V. Chapin Hospital; was awarded the Marcellus Hartley medal by the National Academy of Sciences in 1928, the Sedgwick Medal by the American Public Health Association in 1929 and the Susan Colver Rosenberger Medal by Brown University in 1935; received honorary degrees from Brown University, Rhode Island State College, Kingston, and Yale University, New Haven, Conn.; was the author of numerous works on public health and sanitation and was a frequent contributor to the literature of public health; at one time associate editor of the *American Journal of Hygiene* and the *Journal of Preventive Medicine*; aged 85; died, January 31, of arteriosclerosis and Parkinson's disease.

Achilles Edward Davis Ⓢ New York; University of Louisville (Ky.) Medical Department, 1889; member of the American Academy of Ophthalmology and Otolaryngology, American Ophthalmological Society and the Association for Research in Ophthalmology; fellow of the American College of Surgeons; formerly professor of ophthalmology at the New York Post-Graduate Medical School; consulting ophthalmologic surgeon, New York Post-Graduate Medical School and Hospital, Central Islip (N. Y.) State Hospital, United Hospital, Port Chester and the Ossining (N. Y.) Hospital; served during the World War; author of "The Medical Treatment of Cataract," 1937, and co-author of "Handbook of the Anatomy and the Diseases of the Eye and Ear"; aged 74; died, January 17, at his home in Scarsdale of coronary thrombosis.

Robert Grant Torrey Ⓢ Philadelphia; University of Pennsylvania Department of Medicine, Philadelphia, 1906; professor of principles and practice of medicine and clinical medicine, Woman's Medical College of Pennsylvania; fellow of the American College of Physicians; formerly associate professor of medicine at the University of Pennsylvania Graduate School of Medicine; associate in medicine at his alma mater; medical examiner for the division of tuberculosis of the city health department; on the staff of the Hospital of the Woman's Medical College; visiting physician to the Philadelphia General Hospital; served during the World War; aged 62; died, January 11, of spontaneous subarachnoid hemorrhage.

Colin Luke Begg Ⓢ New York; University of Toronto Faculty of Medicine, Toronto, Ont., Canada, 1899; formerly assistant professor of urology at the New York Post-Graduate Medical School; one of the founders of the American Urological Association; served in various capacities on the staffs of the New York Hospital, Bellevue Hospital, New York Skin and Cancer Hospital and the Columbus Hospital; served during the World War; aged 67; died, January 15, of coronary thrombosis.

John Joseph McGovern Ⓢ Milwaukee; University of Pennsylvania Department of Medicine, Philadelphia, 1893; member of the House of Delegates of the American Medical Association, 1913-1914; fellow of the American College of Physicians; past president of the State Medical Society of Wisconsin and the Medical Society of Milwaukee County; on the staffs of the Columbia Hospital and the Johnston Emergency Hospital; aged 76; died, January 14, of pernicious anemia.

Homer S. Warren Sr., Chicago; College of Physicians and Surgeons of Chicago, 1889; member of the Illinois State Medical Society; in 1916 was commissioned a first lieutenant in the medical reserve corps of the United States Army; founder of the National Pathological Laboratories; for many years on the staff of the Cook County Hospital; aged 75; died, January 18, in the Veterans Administration Facility, Hines, Ill., of arteriosclerosis and heart disease.

Albert Benjamin McCreary Ⓢ Jacksonville, Fla.; University of Tennessee College of Medicine, Memphis, 1922; state health officer, Florida State Board of Health; director of the bureau of county and district health work, state board of health; was at one time engaged in public health work in Tennessee, North Carolina and Virginia; past president of the Florida Public Health Association; aged 45; died, January 24, of organic heart disease.

Charles Francis Coulter, Great Falls, Mont.; University of Minnesota College of Medicine and Surgery, Minneapolis, 1902; member of the Medical Association of Montana and the American Academy of Ophthalmology and Otolaryngology; formerly member of the state board of medical examiners; served during the World War; aged 65; died, January 2, in

St. Patrick Hospital, Missoula, of cerebral hemorrhage and hypertension.

Lawrence Hugh Gilman * Indianapolis; Indiana University School of Medicine, Indianapolis, 1923; clinical professor of mental and nervous diseases at his alma mater; member of the American Psychiatric Association; served during the World War; medical director of the Dr. W. B. Fletcher's Sanatorium; on the staff of the Methodist Hospital; aged 46; died, January 26.

William Judson Martin, Kokomo, Ind.; St. Louis College of Physicians and Surgeons, 1903; member of the Indiana State Medical Association; past president of the Indiana Tuberculosis Association; formerly health officer of Kokomo and secretary of the city board of health; aged 71; died, Nov. 19, 1940, in Winter Haven, Fla.

John Harland Goodnough * Rock Springs, Wyo.; University of Nebraska College of Medicine, Omaha, 1914; past president of the Wyoming State Medical Society, Sweetwater County Medical Society and the Wyoming association of county health officers; aged 51; died, Dec. 13, 1940, in Hollywood, Calif., of nephritis.

David D. Custer * Philadelphia; University of Pennsylvania Department of Medicine, Philadelphia, 1883; for many years police surgeon; aged 83; on the courtesy staff and a member of the board of managers of the Memorial Hospital, where he died, January 14, of cerebral thrombosis and coronary occlusion.

George Bailey Coon, Greystone Park, N. J.; Dartmouth Medical School, Hanover, N. H., 1895; member of the Massachusetts Medical Society and the New England Society of Psychiatry; resident physician at the New Jersey State Hospital; aged 72; died, January 18, of carcinoma of the stomach.

Edward Mellus, Newton, Mass.; Harvard Medical School, Boston, 1903; member of the Massachusetts Medical Society; treasurer of the Middlesex South District Medical Society; member of the board of health; on the staff of the Newton Hospital; aged 68; died, Dec. 7, 1940, of coronary thrombosis.

Elton Smith Corson, Bridgeton, N. J.; University of Pennsylvania Department of Medicine, Philadelphia, 1895; member of the Medical Society of New Jersey; served during the World War; aged 73; died, January 5, in the United States Naval Hospital, Philadelphia, of carcinoma of the rectum.

Francis Joseph Fitzpatrick, Somerville, Mass.; College of Physicians and Surgeons, Boston, 1928; member of the Massachusetts Medical Society; member of the board of public welfare; aged 59; died, January 2, in the Somerville Hospital of bronchopneumonia and diabetes mellitus.

Leander Cox, Springfield, Mo.; Missouri Medical College, St. Louis, 1891; member of the Missouri State Medical Association; on the staffs of the Springfield Hospital, St. John's Hospital and the Burge Hospital; aged 80; died, January 7, of arteriosclerosis and heart disease.

William Joseph Scott, Derby, Conn.; Fordham University School of Medicine, New York, 1916; member of the Connecticut State Medical Society; served during the World War; aged 51; died, Dec. 3, 1940, in the Veterans Administration Facility, Bedford, Mass., of cerebral hemorrhage.

Alexander Sanders De Witt * Detroit; University of Michigan Homeopathic Medical School, Ann Arbor, 1905; fellow of the American College of Physicians; aged 58; on the staff of the Providence Hospital, where he died, January 2, of cerebral hemorrhage.

Erle Franklin Fisher * Chicago; Bennett Medical College, Chicago, 1912; served during the World War; on the associate staff of the Alexian Brothers' Hospital; aged 57; died, January 5, at his home in Fox River Grove of coronary thrombosis.

Jessie Phandora Simpson, Radford, Va.; Woman's Medical College of Pennsylvania, Philadelphia, 1898; for many years a medical missionary in India; aged 74; died, Dec. 24, 1940, in Flagler Beach, Fla., of hypertensive cardiovascular disease.

William Kerr Skinner, Kingston, Ont., Canada; McGill University Faculty of Medicine, Montreal, Que., 1923; member of the American Psychiatric Association and the New England Society of Psychiatry; aged 42; died, Oct. 13, 1940.

Theodore Boose * Williamsport, Md.; College of Physicians and Surgeons, Baltimore, 1889; on the staff of the Washington County Hospital, Hagerstown; aged 76; died, January 11, of coronary occlusion and arteriosclerosis.

Mae Emery White * Canton, Ohio; Eclectic Medical Institute, Cincinnati, 1899; member of the American Society of Anes-

thetists; aged 63; died, Dec. 30, 1940, in the Mercy Hospital of injuries received in an automobile accident.

Herbert Engel, Massena, N. Y.; Friedrich-Wilhelms-Universität Medizinische Fakultät, Berlin, Prussia, 1920; member of the Medical Society of the State of New York; aged 46; died, Dec. 5, 1940, of coronary embolism.

John Edson Bolender * Grand Rapids, Mich.; University of Michigan Department of Medicine and Surgery, Ann Arbor, 1912; aged 55; on the staff of the Blodgett Memorial Hospital, where he died, January 9, of septicemia.

Florence Brandeis, Louisville, Ky.; Woman's Medical College of Pennsylvania, Philadelphia, 1894; member of the Kentucky State Medical Association; aged 80; died, January 8, in the Jewish Hospital of pneumonia.

Albert Leonidas Butt, Danville, Ky.; Vanderbilt University School of Medicine, Nashville, Tenn., 1882; University of Nashville Medical Department in 1883; aged 82; died, January 7, of cerebral hemorrhage.

Adolphus St. Pierre, Pawtucket, R. I.; Victoria University Medical Department, Coburg, Ont., Canada, 1876; aged 89; died, Dec. 3, 1940, of burns received when a spark ignited his clothing while smoking.

Lavander Lafayette Tilley, Lebanon, Tenn.; Vanderbilt University School of Medicine, Nashville, 1894; member of the Tennessee State Medical Association; aged 71; died, Dec. 18, 1940, of heart disease.

Don Bruce Cameron * Grand Rapids, Mich.; Rush Medical College, Chicago, 1922; served during the World War; on the staff of the Butterworth Hospital; aged 44; died, January 17, of carcinoma.

Everett Edwin Lusk, San Bernardino, Calif.; Hahnemann Medical College and Hospital, Chicago, 1901; aged 70; died, Nov. 9, 1940, of acute pentobarbital sodium and gelsmium poisoning.

Joseph Madison Daly * Abilene, Texas; Arkansas Industrial University Medical Department, Little Rock, 1897; aged 68; died, January 6, in the Hendrick Memorial Hospital of influenza.

Barney Barr Smith * Buffalo; Jefferson Medical College of Philadelphia, 1917; member of the Radiological Society of North America; aged 45; died, Dec. 17, 1940, of lobar pneumonia.

Graham B. Bristol, Geneva, Fla.; University of the City of New York Medical Department, New York, 1881; aged 88; died, January 10, of coronary thrombosis and arteriosclerosis.

Alfred Freudenthal * Trinidad, Colo.; Gross Medical College, Denver, 1902; on the staff of the Mount San Rafael Hospital; aged 60; died, Dec. 22, 1940, of angina pectoris.

Stanley Atkins Ferrell, Forrester City, Ark.; Memphis (Tenn.) Hospital Medical College, 1912; aged 59; died, January 13, in Madison of angina pectoris.

Clement H. Bockoven, Verona, Ohio; Illinois Medical College, Chicago, 1903; aged 66; died, January 3, in the McMillen Sanitarium, Columbus, of pneumonia.

Horace Harvey Carothers, Charleroi, Pa.; University of the South Medical Department, Seawance, Tenn., 1899; aged 80; died, January 14, of myocarditis.

George W. Shadwick, Iola, Kan.; Homeopathic Medical College of Missouri, St. Louis, 1900; aged 78; died, Dec. 5, 1940, of cerebral hemorrhage.

William Lee Davidson, Houston, Texas; Medical College of Alabama, Mobile, 1892; aged 71; died, January 2, in Wharton of coronary occlusion.

Richard Frank Trimble, Windsor, Ont., Canada; University of Toronto Faculty of Medicine, 1923; aged 46; died, Nov. 9, 1940, in Tucson, Ariz.

Enos Mitchell, Primghar, Iowa; College of Physicians and Surgeons, Keokuk, Iowa, 1878; aged 86; died, Dec. 9, 1940, of auricular fibrillation.

William B. Brewton, Panama City, Fla.; Medical College of Alabama, Mobile, 1900; aged 79; died, January 5, of coronary occlusion.

Parker Burnham, Gloucester, Mass.; Harvard Medical School, Boston, 1903; aged 62; died, Dec. 25, 1940, of bronchopneumonia.

Newton Murphy Wade, Portland, Ore.; Chicago Medical College, 1880; aged 80; died, Dec. 7, 1940, of coronary thrombosis.

John L. Varnell, Ooltewah, Tenn. (licensed in Tennessee in 1891); aged 87; died, Dec. 20, 1940, of organic heart disease.

Bureau of Investigation

CEASE AND DESIST ORDERS

Abstracts of Certain Federal Trade Commission Releases

The work of the Federal Trade Commission, in helping to protect the public against misrepresentation or fraud in the medical as well as other fields, has been greatly extended by the provisions of the Wheeler-Lea Amendment to the Federal Trade Commission Act. The Food, Drug and Cosmetic Act of 1938 added to the Food and Drug Administration's control of the advertising claims and statements made on the labels of medicines or on the carton or in the accompanying leaflet, whereas what might be termed collateral advertising, that which appears in newspapers and magazines and over the air, comes more actively under the purview of the Federal Trade Commission, by virtue of the Wheeler-Lea Amendment.

THE JOURNAL has at various times commented on the activities of the Federal Trade Commission in this connection, even before the Wheeler-Lea Amendment gave it its added rights. In some cases the Commission may accept from the person or concern involved a stipulation that the objectionable practices or claims cited will be discontinued. In other cases the Commission issues what is known as a Cease and Desist Order, in which the individual, manufacturer or distributor cited is ordered to cease and desist from practices which have been declared objectionable.

Abstracts of some of the orders issued during 1940 follow:

"Dr." Springer's Nostrums.—These were put out by Basic Foods, Inc., Somerset, Pa., whose president was a self-styled "Dr." Curtis Howe Springer. Springer's activities were dealt with in a lengthy article that appeared in THE JOURNAL, Sept. 14, 1935, page 900. This brought out that he had been "Dean" of a discredited technical school in Chicago, had traveled about the country giving "lectures" on psychology, prosperity, personality and some other things; had issued an alleged magazine called "Symposium Creative Psychology," devoted mainly to advertising the man and his activities, especially the "Doc. Springer Temple of Health"; had attempted to start a "health resort" at Mount Davis, near Salisbury, Pa.; had established Basic Foods, Inc.; had claimed various degrees including that of M.D. (which he could not prove) and was putting out various "patent medicines." Two of these were involved in the release issued on Nov. 9, 1940, in which the Federal Trade Commission reported that it had ordered Basic Foods, Inc., and Curtis Howe Springer to cease and desist from certain misrepresentations in the sale of "Dr. Springer's Antediluvian Tea" and "Dr. Springer's Re-Hib." Among these misrepresentations were the use of the word "doctor" or any abbreviation thereof to designate or identify any person when such person was not a physician or practitioner of medicine duly licensed as such; representing that the majority of human aches and pains are due to congestion of the glands and organs of the body, or to constipation or overacid conditions; that Dr. Springer's Antediluvian Tea and Dr. Springer's Re-Hib, or any products of substantially similar composition, may be beneficially or safely taken by all persons, and that any of the respondents' products are approved by any governmental agency; that the tea or any product of substantially similar composition has any beneficial, curative or remedial value for any malady or diseased condition or possesses any therapeutic value in the treatment of kidney trouble, diseased tonsils, stiff and aching joints, swollen feet, heartburn, insomnia or nervousness, or in the treatment of any other condition except to the extent that the symptoms thereof may be relieved by the administration of a mild laxative; that Dr. Springer's Re-Hib, or any product of substantially similar composition, has any beneficial, curative or remedial value for, or possesses any therapeutic value in the treatment of, any condition or malady, except to the extent that such condition or malady is caused by hyperacidity of the stomach, which may be relieved by the administration of the product as a palliative or acid neutralizer, and except to the extent that the digestion of foods may be aided by the administration of the product as a digestant.

Home Diathermy.—This is a device put out by the Home Diathermy Company, Inc. On Nov. 26, 1940, the Federal Trade Commission ordered this New York concern to cease representing that its "Home Diathermy" device may be easily and safely used in the home; that its use constitutes a cure or remedy for arthritis, neuritis, bursitis, sciatica, neuralgia, lumbago, hay fever, asthma, high or low blood pressure or rheumatism, or that the device has any therapeutic value in treating such diseases and conditions or in treating any other ailment, unless the advertisement is specifically limited to those cases in which there is no acute inflammation, infection, pus formation, arteriosclerosis or any condition tending toward hemorrhage. The order also prohibits advertisements which fail to reveal that the unsupervised use of this device by persons not skilled in the diagnosis, analysis and methods of treatment of disease may result in serious and irreparable injury to health.

Lady Lydia Capsules.—This nostrum is also designated as "Soluble Gelatin Capsules No. 5, Apioi and Ergotin Compound" and is put out by Louis, Sol and Marvyn Cohen, trading as Cohen's Cut Rate Drug Store and Cohen Drug Company, these persons being operators of a chain

of drugstores in West Virginia. On Sept. 23, 1940, the Federal Trade Commission declared that its investigations had shown that the Cohens had falsely advertised through the mails and by other means, representing that their product is a competent and effective treatment for delayed menstruation and that it is safe and harmless. On the contrary, the Commission pointed out that the product contains certain drugs in quantities sufficient to cause serious and irreparable injury to health if used under the conditions prescribed in the advertisements and under such conditions as are customary or usual and that the advertising did not bring out this fact. The Commission ordered the Cohen concern to cease and desist from the misrepresentations named.

Lady Lydia Female Capsules.—The Gotlieb concern, which is run by a Lenard and Sarah Gotlieb of Clarksburg, W. Va., trading as Reed's Cut Rate Store and Fountain Cut-Rate Stores, put out this nostrum. They also designated it as "Prescription Female Capsules." On Oct. 22, 1940, the Federal Trade Commission ordered the Gotlieb concern to discontinue advertisements which represent, directly or through inference, that their preparation is a competent or effective treatment for delayed menstruation and that it is harmless; or advertisements which fail to reveal that use of the preparation may cause gastrointestinal disturbances and excessive congestion and hemorrhage of the pelvic organs, and, in the case of pregnancy, may cause uterine infection and blood poisoning.

Morgan's Pomade.—Rose Heifler and Fred Jackson, doing business as Heifler and Jackson, Brooklyn, advertised this product as "Undoubtedly the finest remedy for grey or faded hair . . . not a dye but a special compound which when massaged into the roots of the hair, nourishes it back to its original color and luster. . . ." On the contrary the Federal Trade Commission charged that the product was a lead-and-sulfur dye which when applied to gray hair would dye the exterior of the hair shaft and that use of the preparation would not supply the hair shaft with the color pigments, a deficiency of which material causes gray hair. Further, the advertisements contained no statements to the effect that application of the product to a tender skin, or to skin on which there are lesions which have broken the continuity of the integument, may be injurious. On April 20, 1940, the Commission ordered the company to cease representing that its product is not a tint or a dye; that its application causes the hair to change its color without dyeing; that its use will restore the original color to gray hair or prevent hair from falling out, or that it penetrates into the roots of the hair and enriches the hair.

Murine.—On July 6, 1940, the Federal Trade Commission ordered the Murine Company, Inc., Chicago, to cease advertising that "Murine" is a cure, remedy or effective treatment for eyestrain, or possesses any therapeutic value with respect to that condition in excess of furnishing relief from irritation and eye discomfort; that it will prevent or ward off eyestrain due to driving, reading, sewing, viewing moving pictures, or other excessive use of the eyes; that it will prevent eye irritation due to exposure to dust, sun or light glare or that it possesses any therapeutic value with respect to irritation of the eyes aside from furnishing relief from such irritation. Some 1940 advertising of Murine states that the ingredients are potassium bicarbonate, potassium borate, hydrogen borate, berberine hydrochloride, hydrastine hydrochloride, glycerin, "merthiolate" (sodium ethylmercuri thiosalicylate, Lilly) 1:100,000 and sterilized water.

Pancreobismuth.—The Frye Company of Watertown, Mass., was reported as the distributor of this product, which was also known as "Pancreo Bismuth" and "Pancreobismuth and Pepsin." In January 1940 the Federal Trade Commission ordered the concern to cease and desist from representing, among other things, that its preparation has therapeutic value in the treatment of upset stomach, in the relief of indigestion due to acid stomach or in the neutralization of excess acid and allaying of irritation, beyond its being a simple antacid and carminative tending to give temporary relief from distress caused by such symptoms. The firm also was ordered to cease using the foregoing names for its product and to avoid any other trade names containing the words "Pancreatin" or "Pepsin."

Phillips' Milk of Magnesia Creams.—Two cosmetics of this brand, "Milk of Magnesia Cleansing Cream" and "Milk of Magnesia Texture Cream," are put out by the Charles H. Phillips Chemical Company, New York. On Dec. 18, 1940, the Federal Trade Commission ordered the concern to "cease disseminating advertisements which represent, directly or through inference, that there is a disease or condition properly described as 'acid skin,' which may be cured by use of the respondent's preparation or which causes skin blemishes, blackheads, enlarged pores, oily shine or dry, scaly roughness; that use of the respondent's preparations will cure or overcome skin blemishes; that use of either or both preparations have value in treating roughness of the skin in excess of temporarily relieving roughness when due solely to dryness; that either or both will remove blackheads or have value in such removal in excess of aid through removing accumulated dirt, foreign matter or skin excretions lodged in the exterior openings or are of value in the treatment thereof in excess of aiding in their reduction when caused solely by accumulated dirt, foreign matter or skin excretions lodged in exterior openings of the pores; and will overcome or are of value in treating oily shine or oiliness of the face, in excess of temporarily removing accumulated oil from the skin surface." The order also directs the respondent to "cease representing that use of either or both preparations neutralizes excess fatty acid or other acid accumulations on the skin in the same way that milk of magnesia neutralizes acid in the stomach, or that the neutralization of a normal fatty acid or other acid accumulation on the skin is necessary to the maintenance of a healthy skin condition; that the preparations or either of them change or affect the texture of the skin, and that the use of the respondent's cleansing cream or of any other product of substantially similar ingredients penetrates the pores of the skin or thoroughly cleans the skin, except as it acts upon dirt or other matter which may be present on the skin surface or in the exterior openings of the pores."

Medical Examinations and Licensure

NATIONAL BOARD OF MEDICAL EXAMINERS EXAMINING BOARDS IN SPECIALTIES

Examinations of the National Board of Medical Examiners and Examining Boards in Specialties were published in *THE JOURNAL*, March 8, page 1023.

BOARDS OF MEDICAL EXAMINERS

ALABAMA: Montgomery, June 17-19. Sec., Dr. J. N. Baker, 519 Dexter Ave., Montgomery.

ARKANSAS: * *Medical*. Little Rock, June 5-6. Sec., Dr. D. L. Owens, Harrison. *Eclectic*. Little Rock, June 5-6. Sec., Dr. Clarence H. Young, 1415 Main St., Little Rock.

CALIFORNIA: *Oral examination* (required when reciprocity application is based on a state certificate or license issued ten or more years before filing application in California), San Francisco, April 16. *Written*. San Francisco, June 30-July 3. Sec., Dr. Charles B. Pinkham, 1020 N. St., Sacramento.

CONNECTICUT: * *Endorsement*. Hartford, March 25. Sec., Dr. Thomas P. Murdock, 147 W. Main St., Meriden.

DELAWARE: July 8-10. Sec., Medical Council of Delaware, Dr. Joseph S. McDaniel, 229 S. State St., Dover.

DISTRICT OF COLUMBIA: * Washington, May 12-13. Sec., Commission on Licensure, Dr. George C. Ruhland, 203 District Bldg., Washington.

FLORIDA: * Jacksonville, June 23-24. Sec., Dr. William M. Rowlett, Box 786, Tampa.

GEORGIA: Atlanta, June. Sec., State Examining Boards, Mr. R. C. Coleman, 111 State Capitol, Atlanta.

HAWAII: Honolulu, July 14-17. Sec., Dr. James A. Morgan, 48 Young Bldg., Honolulu.

IDAHO: Boise, April 1. Dir., Bureau of Occupational License, Mr. H. B. Whittlesey, 335 State Capitol Bldg., Boise.

ILLINOIS: Chicago, April 1-3. Superintendent of Registration, Department of Registration and Education, Mr. Lucien A. File, Springfield.

INDIANA: Indianapolis, June 17-19. Sec., Board of Medical Registration and Examination, Dr. J. W. Bowers, Citizens Trust Bldg., Fort Wayne.

KANSAS: Kansas City, June 17-18. Sec., Board of Medical Registration and Examination, Dr. J. F. Hassig, 905 N. 7th St., Kansas City.

KENTUCKY: Louisville, June 5-7. Sec., State Board of Health, Dr. A. T. McCormack, 620 S. Third St., Louisville.

MARYLAND: *Medical*. Baltimore, June 17-20. Sec., Dr. John T. O'Mara, 1215 Cathedral St., Baltimore. *Homeopathic*. Baltimore, June 17-18. Sec., Dr. John A. Evans, 612 W. 40th St., Baltimore.

MICHIGAN: * Ann Arbor and Detroit, June 11-13. Sec., Board of Registration in Medicine, Dr. J. Earl McIntyre, 202-4 Hollister Bldg., Lansing.

MINNESOTA: * Minneapolis, April 15-17. Sec., Dr. Julian F. Du Bois, 350 St. Peter St., St. Paul.

MISSISSIPPI: Jackson, June. Asst. Sec., State Board of Health, Dr. R. N. Whitfield, Jackson.

MONTANA: *Reciprocity*. Helena, March 31. *Written*. Helena, April 1. Sec., Dr. S. A. Cooney, 216 Power Bldg., Helena.

NEW JERSEY: Trenton, June 17-18. Sec., Dr. Earl S. Hallinger, 28 W. State St., Trenton.

NEW MEXICO: Santa Fe, April 14-15. Sec., Dr. Le Grand Ward, 135 Sena Plaza, Santa Fe.

NEW YORK: Albany, Buffalo, New York and Syracuse, June 23-26. Chief, Bureau of Professional Examinations, 315 Education Bldg., Albany.

NORTH DAKOTA: Grand Forks, July 1-4. Sec., Dr. G. M. Williamson, 4½ S. Third St., Grand Forks.

OHIO: Columbus, April 1. Sec., Dr. H. M. Platter, 21 W. Broad St., Columbus.

OKLAHOMA: * Oklahoma City, June 11-12. Sec., Dr. James D. Osborn Jr., Frederick.

OREGON: Portland, April 3. Exec. Sec., Miss Lorianne M. Conlee, 608 Failing Bldg., Portland.

PENNSYLVANIA: Philadelphia and Pittsburgh, July. Act. Sec., Bureau of Professional Licensing, Department of Public Instruction, Mrs. Marguerite G. Steiner, 358 Education Bldg., Harrisburg.

SOUTH DAKOTA: * Pierre, July 15-16. Dir., Medical Licensure, Dr. J. F. D. Cook, State Board of Health, Pierre.

TENNESSEE: Memphis, March 26-27. Sec., Dr. H. W. Qualls, 130 Madison Ave., Memphis.

VIRGINIA: Richmond, June 17-20. Sec., Dr. J. W. Preston, 30½ Franklin Road, Roanoke.

* Basic Science Certificate required.

BOARDS OF EXAMINERS IN THE BASIC SCIENCES

ARIZONA: Tucson, March 18. Sec., Mr. Franklin E. Roach, Science Hall, University of Arizona, Tucson.

DISTRICT OF COLUMBIA: Washington, April 21-22. Sec., Commission on Licensure, Dr. George C. Ruhland, 203 District Bldg., Washington.

FLORIDA: De Land, June 7. *Applications must be on file not later than May 24*. Sec., Prof. J. F. Conn, John B. Stetson University, De Land.

MINNESOTA: Minneapolis, April 1-2. Sec., Dr. J. Charnley McKinley, 126 Millard Hall, University of Minnesota, Minneapolis.

OKLAHOMA: Oklahoma City, May 22. Sec. of State, Hon. C. C. Childress, State Capitol, Oklahoma City.

OREGON: Corvallis, July 12. Sec., State Board of Higher Education, Mr. Charles D. Byrne, University of Oregon, Eugene.

RHODE ISLAND: Providence, April 3-4. Sec., Division of Examiners, Rev. Nicholas H. Serror, Providence College, Providence.

SOUTH DAKOTA: June. Sec., Dr. G. M. Evans, Yankton.

WISCONSIN: Madison, April 5. Sec., Prof. Robert N. Bauer, 3414 W. Wisconsin Avenue, Milwaukee.

District of Columbia November Report

Dr. George C. Ruhland, secretary, Commission on Licensure, reports the written examination for medical licensure held at Washington, Nov. 12-13, 1940. The examination covered 10 subjects and included 60 questions. An average of 75 per cent was required to pass. Eighteen candidates were examined, all of whom passed. The following schools were represented:

School	PASSED	Year Grad.	Per Cent
George Washington University School of Medicine.....	(1935)		77.4,
(1936) 80, (1939) 79, 82.6, 84, 84.8, 85.5, 86.6			
Georgetown University School of Medicine.....	(1938)		80.3,
(1939) 82, 83.1			
Howard University College of Medicine.....	(1937)		78.8,
(1939) 79.1			
Johns Hopkins University School of Medicine.....	(1930)		80.1
University of Minnesota Medical School.....	(1924)		78.3
Columbia University College of Physicians and Surgeons.....	(1928)		79.3,
(1938) 83.8			
University of Oklahoma School of Medicine.....	(1938)		85.8

Sixteen physicians were licensed to practice medicine by reciprocity and 18 physicians so licensed by endorsement from June 12 through December 12. The following schools were represented:

School	LICENSED BY RECIPROCITY	Year Grad.	Reciprocity with

West Virginia November Report

Dr. Arthur E. McClue, secretary, Public Health Council of West Virginia, reports the oral and written examination for medical licensure held at Morgantown, Nov. 1-2, 1940. The examination covered 11 subjects and included 110 questions. An average of 80 per cent was required to pass. Eight candidates were examined, all of whom passed. Eleven physicians were licensed to practice medicine by reciprocity and 3 physicians so licensed by endorsement. The following schools were represented:

Bureau of Legal Medicine and Legislation

MEDICOLEGAL ABSTRACTS

Hospitals: Liability for Injury to Mental Patient Following Ineffectual Surveillance.—The patient in this case was suffering from a mental disorder which was diagnosed as "nervousness and stuporous depression." In February 1937, after consulting a specialist in mental diseases, she was taken to a private hospital, located on the shore of a lake, which was owned and operated by the defendant physician. When the patient was admitted to the hospital, her husband and sister discussed with the defendant the patient's health, background, family life and the like and, as the sister testified, they "discussed that she would have to have special care and she would have to be watched." The patient was assigned to a room the windows of which were furnished with guards and storm windows, but it was adjacent to a living room in which the windows were not guarded and could be easily raised. The door to her room was not locked and was left ajar. Early on the morning of the patient's seventh day in the hospital, about five minutes after having had a conversation with the patient in her room, one of the nurses heard a noise and on investigation discovered that the patient had left her room, gone into the living room, opened the window and stepped out onto the ground, clad only in her nightgown. The temperature at the time was 2 degrees above zero (F.). The defendant, who lived about two blocks from the hospital and had been "immediately" notified, went at once to the lake shore, made an unsuccessful search and returned to the hospital building. There he discovered her footprints, followed them to an outhouse on the premises where he found the patient and returned her to the hospital. She had been exposed to the cold for about one hour and forty minutes. Her legs and arms were swollen, her feet were frozen, she was in a state of shock and she began to have a high temperature. Eventually her mental condition became such as to require commitment to an insane asylum. Subsequently the patient and her husband sued the defendant for damages for physical and mental injuries which they alleged she had sustained because of the defendant's negligence. The plaintiffs obtained a verdict in their favor in the trial court, which was modified by the presiding judge before judgment in their favor was entered, and both the plaintiffs and the defendant thereupon appealed to the Supreme Court of Wisconsin.

The plaintiffs contended that the defendant's conduct was the cause of the patient's aggravated mental condition, whereas the defendant contended that there was no evidence of any negligence on the part of either himself or the employees of the hospital. A private hospital engaged in the treatment of nervous and mental diseases, said the Supreme Court, is bound to use such means as are necessary and reasonably sufficient to restrain and guard its patients. But in the present case the patient was admitted for treatment and was not committed for restraint. There was not the slightest evidence that she was considered a proper subject for special restraint or that her history aroused suspicion or placed the defendant on notice that the patient would attempt to leave the hospital or inflict injury on herself if not restrained. In fact, up until she left the hospital, she conducted herself in a mild and docile manner. The court, therefore, held that that portion of the verdict which found the defendant guilty of negligence in not properly restraining or guarding the patient was erroneous.

The court, however, was of the opinion that the jury should have been more clearly instructed as to whether the defendant and his nurses had discharged their duty of due care after discovering the patient's departure. In the judgment of the court the jury would have been justified from the evidence in concluding that the nurses might have prevented the extended exposure and that the defendant might have found the patient sooner if he had first looked for her footprints and started his search

from the hospital building rather than from the lake shore. The jury might have found that such conduct amounted to negligence. The jury was asked to determine whether or not the defendant and his nurses had failed "to use such means to restrain and guard her [the patient] as would seem reasonably sufficient to an ordinarily prudent man under like circumstances to prevent her from escaping and injuring herself." It could be assumed that this question was broad enough to cover both negligence in permitting her to leave the hospital and negligence in failing to use due care in returning her to the hospital. But such an assumption made the question a double one and rendered it impossible to determine whether an affirmative answer to it was based on only one or both theories of negligence. The court concluded, therefore, that justice required that a new trial be had on this issue, and so it ordered the cause remanded for a new trial.—*Dahlberg v. Jones*, 285 N. W. 841 (Wis., 1939).

- New York, Medical Society of the State of, Buffalo, Apr. 28-May 1. Dr. Peter Irving, 292 Madison Ave., New York, Secretary.
- Northern Tri-State Medical Association, Tiffin, Ohio, Apr. 8. Dr. E. Benjamin Gillette, 320 Michigan St., Toledo, Ohio, Secretary.
- Post Graduate Institute of the Philadelphia County Medical Society, Philadelphia, Mar. 31-Apr. 4. Dr. Rufus S. Reeves, 301 South 21st St., Philadelphia, Director.
- Society for the Study of Asthma and Allied Conditions, Atlantic City, N. J., May 3. Dr. W. C. Spain, 116 East 53d St., New York, Secretary.
- South Carolina Medical Association, Greenville, Apr. 15-17. Dr. Julian P. Price, 105 West Cheves St., Florence, Secretary.
- Tennessee State Medical Association, Nashville, Apr. 8-10. Dr. H. H. Shoulters, 706 Church St., Nashville, Secretary.

Current Medical Literature

AMERICAN

The Association library lends periodicals to members of the Association and to individual subscribers in continental United States and Canada for a period of three days. Three journals may be borrowed at a time. Periodicals are available from 1931 to date. Requests for issues of earlier date cannot be filled. Requests should be accompanied by stamps to cover postage (6 cents if one and 18 cents if three periodicals are requested). Periodicals published by the American Medical Association are not available for lending but can be supplied on purchase order. Reprints as a rule are the property of authors and can be obtained for permanent possession only from them.

Postoperative Thrombosis and Embolism.—De Takats points out that, while there has been a gradual reduction in the general mortality following major surgical procedures, the incidence of postoperative thrombosis and embolism has not decreased. He discusses the three predisposing factors of postoperative embolism and thrombosis: hemoconcentration, the slowing of venous return and meteorologic influences. As preventive measures are possible against the first two, they constitute the prophylactic field. The objectives of early treatment in thrombosis are the freeing of the limb from postoperative edema and the protection of the patient from propagating thrombosis and embolism. The patients with the early premonitory symptoms which may later be followed by the manifest thrombosis or remain latent abortive types of phlebitides are more endangered by embolism than those in which a large "milk leg" has appeared. In fact, once a milk leg has made its appearance the danger of embolism is slight. A small rise in the evening temperature, a persistently elevated pulse rate without cause after the fourth to fifth postoperative day should cause one to seek for other signs and symptoms of latent thrombosis. These are (1) an elevation of skin temperature of the sole of the foot on the affected side, (2) pain on pressure in the sole of the foot, in the calf muscles, in the popliteal space on dorsiflexion of the foot or in the groin, (3) a slight edema of the groin or suprapubic region, (4) frequent urination or mucous stools and (5) pain in the small of the back. The three last symptoms are suggestive of pelvic thrombosis, while the location of pressure pain often denotes the site of the original thrombus, which, if it remains localized, may not progress to a manifest thrombosis. However, there are post-

operative blood clots in which these premonitory signs and symptoms are missing. The patient may show a smooth post-operative course with no rise in pulse and temperature, no pain or swelling; most fatal pulmonary emboli originate from such thrombi. They are located in the muscle veins of the calf or the large pelvic plexuses. Many small emboli go unnoticed. Proof of this is the frequent finding of emboli in the lungs of patients whose clinical symptoms were not suggestive. A quick sharp pain in the side followed by a mild dry or exudative pleurisy, a short retrosternal attack of pain or a few minutes of dyspnea followed by lassitude should suggest embolism. Nurses' records show that the three leading symptoms are dyspnea, cyanosis and chest pain. Emergency treatment of pulmonary embolism when cyanosis and dyspnea are the predominant symptoms consists of drugs and oxygen by nasal catheter or, preferably, in 100 per cent concentration. However, massive pulmonary embolism is often characterized by pallor, retrosternal pain and fall in blood pressure; its differentiation from a coronary occlusion is quite difficult. It is necessary to avoid the obsession that cyanosis and dyspnea are the cardinal signs of pulmonary embolism. If the diagnosis is incorrect and coronary occlusion, acute pulmonary edema or cerebrovascular accident is present, the treatment does no harm but is definitely beneficial. Morphine, digitalis and epinephrine are not recommended, as they either sensitize the vagus or, in the case of epinephrine, favor pulmonary edema. Instead, atropine and papaverine are used.

Hypertension Reduced with Renal Extracts.—According to Page and his associates, evidence from a study of dogs, rats and patients with hypertension indicates that an extractable substance is present in normal kidneys which has the property of reducing arterial blood pressure, and experience suggests that it may have therapeutic properties. A number of extracts have been found active. All extracts used for animals were treated by adding one part of merthiolate to 20,000 parts of extract. Sterility of extracts used for patients was assured by filtration through a Seitz filter. In dogs, subcutaneous or intramuscular injection of renal extracts caused no immediate change in blood pressure. Intravenous injection resulted in a sharp, prolonged rise, probably the result of contained renin. A fall in blood pressure usually began after two to four days. Its effect appeared cumulative, for if an excess was given the pressure continued to fall progressively until death occurred. A fatal dose of extract caused a shocklike syndrome to appear. The renal extract given to dogs with severe experimental hypertension and nitrogen retention often reduced both. Many extracts were inactive or an insufficient amount was given. The length of time before the arterial pressure rose after treatment was discontinued varied. In general the larger the dose of extract, the more prolonged the effect. In a few instances it rose above the hypertensive level (150 mm. of mercury mean pressure) within four days after treatment was stopped. In most cases from four to forty-one days was

required and in a few it has not risen even after ninety-seven days. The extract given has been measured in terms of original whole kidney substance used for its preparation. Roughly, from 400 to 900 Gm. of kidney was required for the preparation of sufficient extract to reduce the mean arterial pressure of a dog weighing 12 Kg. (26 pounds) from 200 to 130 mm. of mercury. The clinical condition of the animals remained excellent even when the pressure fell to 100 mm. or less, provided the drop did not occur too precipitously. The treatment of 54 animals exhibiting signs of the malignant syndrome saved the lives of 22. It appeared of the utmost importance to administer extract early and in large doses. The eye signs regressed, and vision was often restored. Improvement appeared to last only for as long as the animals continued to receive the extract. After the malignant syndrome reappeared, further treatment caused a second regression in 4 dogs. Much the same phenomena were observed in hypertensive rats as in dogs. The authors gave daily extracts of 800 to 1,000 Gm. of whole fresh kidney to hypertensive patients. The most general reaction was pain in the muscles of the back and a feeling of constriction in the chest. This may last for ten minutes or more and be followed by a rise in temperature to about 102 F. Occasionally a sufficiently sharp fall in blood pressure occurred a few minutes after the injection to make it desirable to administer epinephrine. Local reactions were reddening, induration and pain around the site of injection. All the reactions were irregular in their appearance. As in the animals, the extract caused no immediate fall, but after several days or a week the pressure was definitely reduced. The blood pressure of 6 patients with essential (fixed) hypertension has been reduced, respectively, from 220, 248, 200, 237, 213, 229 systolic and 130, 148, 129, 130, 123, 119 diastolic to 148, 172, 173, 189, 170, 157 systolic and 103, 104, 118, 102, 106, 78 diastolic. When the blood pressure was reduced, the headaches of the patients who had them when the blood pressure was high disappeared. Dyspnea was lessened. On the whole the patients felt much better, though some of them were not aware of the reduction of the blood pressure. The most dramatic changes were observed in 5 patients with advanced malignant hypertension; 1 of them had convulsions and 2 were stuporous. Two days after treatment was initiated the patients were alert and sitting up in bed. Convulsions did not recur during treatment. Two of the patients were almost blind and the other 3 had reduced vision because of hemorrhages, exudates and papilledema. Vision was partially restored in all. The electrocardiogram of these patients after treatment demonstrated an improved state of the myocardium; the T waves became upright when they had been inverted. Hemoglobin tended to fall even after sufficient amounts of extract; therefore the anemia of malignant hypertension may require additional treatment. Two of the patients with malignant hypertension are dead. The other 3 patients are ambulant, and 1 is now being treated as an outpatient. Increasing experience with the treatment suggests that it is of therapeutic value in hypertension but that it is as yet in the experimental stage.

*Continuous Transthoracic Aspiration of Pulmonary Cavities: Indications, Technique and Case Reports. A. Guggenheim and M. Finkelstein, Denver.—p. 45.

Continuous Aspiration of Pulmonary Cavities.—Since September 1939 Guggenheim and Finkelstein have used continuous transthoracic aspiration of pulmonary cavities, according to the method of Monaldi, for 4 patients. The first patient experienced definite improvement with the beginning of aspiration and has gained in weight. The sputum dropped from 90 to 2 cc. daily. Aspiration was discontinued after two months; ten sputum speci-

mens were found negative on direct smear and five positive. The aspirated material of the second patient dropped from 75 to 8 cc. daily after ten weeks of treatment. The sputum decreased to 75 cc. (by one half) daily. Both sputum and aspirated material are still positive for tubercle bacilli. The cavity, as seen on roentgen study, was decreased by almost one half. Aspiration is being continued. Aspiration of the third patient was discontinued after eleven days, as the temperature rose abruptly to 103 F. No fluid or air could be aspirated from the cavity. Roentgen study revealed a massive infiltration throughout the lower half of the right lung field. The infection subsided, and the sinus healed after three weeks. The temperature has remained normal for six weeks. The sputum decreased in quantity and was negative for tubercle bacilli. A roentgenogram showed complete resolution of the acute infiltration and disappearance of the cavity. The last patient had had an artificial pneumothorax on the right side two years previously. It was followed by a superimposed spontaneous pneumothorax and given up as dangerous. The patient's course was poor. Cough was excessive and harassing, expectoration reaching 500 cc. daily. Aspiration of the huge cavity on the left side was performed to relieve the excessive cough and expectoration. There was slight symptomatic relief but after four weeks the patient died. Necropsy revealed no gross changes in the cavity that could be ascribed to the procedure, except thinning of the wall near the site of entry. Continuous aspiration has thus far been applied only to tuberculous cavities, but the authors suggest that it may be of value in chronic lung abscess, infected pulmonary cysts and other conditions characterized by infected cavities in the lung. Aspiration may be useful as a preliminary to thoracoplasty, making it possible to operate on a lung containing a shrunken cavity free of secretion, instead of a large defect containing infectious pus. Since the period of observation for any case has been short, it is impossible to draw conclusions. Immediate results have been encouraging and indicate that the procedure is worthy of further clinical trial.

Effects of Serum and Saline Infusions.—According to Hill and his associates, accurate knowledge is needed of the effects of various types of infusions recommended in the treatment of hemorrhage and shock, both of which conditions are characterized by a depletion of the volume of circulating blood. They made observations on the hemoglobin concentration, blood volume and blood pressure before and after infusion with physiologic solution of sodium chloride, hypertonic saline solution, serum or concentrated serum in normal persons and in patients with postoperative and posttraumatic shock. They found that physiologic or hypertonic saline solution given intravenously to normal persons is rapidly lost from the circulation. Serum given intravenously to normal persons is retained in the circulation for long periods. The rise in blood volume depends on the total quantity of protein added and is independent of the dilution of serum employed. In shocked patients the intravenous administration of saline solution produces only transient benefit. Giving serum intravenously is effective in overcoming circulatory collapse due to diminished blood volume. The recovery of a shocked patient is invariably heralded by a rise in systolic and pulse pressures. The pulse rate, on the other hand, is a deceptive index of the patient's condition, for it often remains high, even when the blood pressure has risen to normal. It is useful to follow the concentration of hemoglobin in the blood of shocked patients. A rising hemoglobin means a falling blood volume and precedes a deterioration in the patient's condition. Recovery can be forecast if the hemoglobin is falling, meaning that the blood volume is being spontaneously restored by dilution of the blood. The retention of infused serum or saline solution can be gauged by estimating the hemoglobin.

*Kauffmann Diuresis Test of Heart Function in Children. J. T. Rubio Garcia.—p. 59.

Kauffmann Diuresis Test of Heart Function in Children.—Rubio Garcia performed the Kauffmann test on 100 children ranging in age from 4 to 13 years. A positive test is indicated by the increase in diuresis in the last two hours of the test. The patient lies in bed during the test in the horizontal posture for the first four hours and in the inclined headward position for the last two hours. The test was negative in cases of rheumatic fever and heart disease with edema, in chorea with or without rheumatism, in chronic deforming polyarticular rheumatism without heart disease, in congenital heart disease, and in various diseases not related to rheumatism and heart disease. The test was positive in all cases of rheumatic fever with heart disease in the absence of edema or with very mild edema. In some of the cases positive results were observed in the absence of edema. The test became negative when edema appeared or reappeared, or the reverse. In all cases a positive test was observed only in the absence of edema and pointed to impending decompensation of the heart. The author suggests the use of an index for the gradation of the results of the test as a help in recognizing impending decompensation. The index is obtained by ascertaining the average hourly output for the first four hour period and the average hourly output for the second two hour period and dividing the figure of the first average hourly output by that of the second one. Amounts below the index are considered positive and above negative. The results are indicated by plus and minus signs respectively. Figures between 0.9 and 1 are weakly positive (+), between 0.6 and 0.9 positive (++) and below 0.6 strongly positive (+++). Figures between 1 and 1.1 are weakly negative (—), between 1.1 and 1.6 negative (—) and above 1.6 strongly negative (—). The author concludes that Kauffmann's test is of value for the diagnosis of latent decompensation of the heart. The test is simple, harmless and reliable. It has no prognostic value nor applicability to children with manifest edema. The index for grading the results of the test is also simple and of value for a rapid evaluation of the results of the test and for helping one in deciding on the advisability of continuing or discontinuing the periods of rest in bed, the proper diet and treatment.

- *Adrenal Insufficiency in Epilepsy. E. Cantilo.—p. 2641.
Sulfapyridine in Therapy of Gonococcal Arthritis. D. Cattaneo.—p. 2644.

Adrenal Insufficiency in Epilepsy.—Cantilo states that chronic adrenal insufficiency in the absence of any other pathologic factor may be the cause of epileptic crises of the type of essential epilepsy or its equivalents. The condition is symptomatic for adrenal insufficiency and can be controlled by proper endocrine therapy without bromides and barbiturates. Patients with this type of epilepsy have an asthenic body build, hyperpigmented skin, a depressive temperament, hypoglycemia during fasting and a diminished insulin tolerance. Glycemia and insulin tolerance return to normal values if the epileptic crises are controlled by endocrine therapy. The author reports satisfactory results in three cases from exhibition of endocrine extracts in daily doses of 0.5 Gm. of extract of the anterior lobe of the hypophysis, 0.25 Gm. of extract of total adrenals and 0.1 Gm. of extract of the thyroid. The extracts were administered by mouth. The patients received a preparation of gonadotropic hormone ("pregnyl") in doses of 1 cc. containing 500 units of the hormone, every other day for the first two months of the treatment. In cases reported by the author, glycemia and insulin tolerance returned to normal values and the epileptic crises have been controlled up to the present for more than one year without administering any other drug. The author believes that this type of epileptic crises is due to sudden lowering of glycemia, which is preventable by endocrine therapy.

Book Notices

Clinical Diabetes Mellitus and Hyperinsulinism. By Russell M. Wilder, M.D., Ph.D., F.A.C.P., Professor and Chief of the Department of Medicine, The Mayo Foundation for Medical Education and Research, University of Minnesota, Minneapolis. Cloth. Price, \$6. Pp. 459, with 19 illustrations. Philadelphia & London: W. B. Saunders Company, 1940.

An important contribution to the subject of disorders of sugar metabolism with emphasis on diabetes mellitus, this first edition will fill a void in the textbook literature for physicians and medical students. In such a rapidly changing field Dr. Wilder authoritatively strikes a nice balance between vital scientific facts and practical knowledge. His right to appraise the important modern advances can scarcely be questioned in view of his annual reviews of the literature. Likewise, as one of the most experienced clinicians in the field his practical methods are useful.

From a concise physiologic approach clinical features are evolved, including diagnosis of diabetes, its pathogenesis, prognosis and course, therapy by insulin, diet and education of the patient, and complications. The author has done an exceptionally fine piece of work in presenting the complications of diabetes in an organized form. Refreshing is his treatment of the subject of arteriosclerosis associated with diabetes. Too long has it been tacitly assumed that vascular disease necessarily results from long continued diabetes. This critical discussion should help to dispel an illusion.

The sections on substitution therapy (insulin and protamine zinc insulin) and diet are especially valuable to the student and practitioner. They emphasize the practical and could almost be followed by the layman. Details of injection technic, sterilization, care of apparatus, manipulation of dosage, nutritional rules, quantitative diet methods and menus are all described clearly and from the point of view of one who has met the problems of the diabetic patient in his home in the simplest fashion possible without sacrifice of effectiveness. Some will take issue with the opinion regarding the advisability of permitting glycosuria and hyperglycemia in certain cases as a buffer against insulin shock, but at least the opposing views are cited and reasons are given. Probably most students of diabetes are forced to abide by the same principles, but some lack the courage to advise so publicly. Perhaps there is no better authority in the world for an evaluation of hyperinsulinism and its management; hence its handling in somewhat greater detail than in most reference volumes.

With the advent of Wilder's monograph the practicing physician is provided with a volume of intensely practical methods. More important, the teacher of medicine now has a sensibly accurate reference book with which to guide his students.

Absorption, Metabolism and Storage of Vitamin A and Carotene, With Some Remarks on the Vitamin A Requirement. By Torben K. Wihl. Translated from Danish by Hans Andersen, M.D. Paper. Pp. 263. Copenhagen: Einar Munksgaard; London: Oxford University Press, 1940.

Approximately half the monograph is used for describing and discussing the author's own researches. The remainder is used for orientation in the chemistry of vitamin A and the carotenoids and for review and discussion of the literature. The monograph is of value not only because it gives much useful information with a direct application but also because all experiments and analytic procedures and methods are described in meticulous detail. The author is commendably critical in his interpretations and judgments. Some of the interesting conclusions reached are as follows: Serum vitamin A concentration does not represent accurately the content of the depots. No connection exists between the carotenoid concentration in serum and its vitamin A content. "Tolerance tests" give no information about the carotenoid or vitamin A contents of the organism. Even with the ingestion of large amounts, little or no vitamin A is excreted in the feces, whereas from 20 to 70 per cent of carotenoids are excreted even with moderate doses. Much of the difference in excretion is probably due to greater resistance of the carotenoids to destructive agents in the intestine. No essential difference exists as to vitamin A reserves of the liver between the Danish population and the population of neighboring countries. The conversion of carotene

to vitamin A is a rapid process. The effect of intramuscular administration of vitamin A is far inferior to the oral. Presumably the optimum requirement of an adult person for vitamin A is between 2,000 and 4,000 units daily; the requirement for β carotene is twice this amount. The vitamin A requirement of the infant is reckoned at 25 units for each kilogram. To lactating women whose diet is suspected of being low in vitamin A, 6,000 units daily should be administered. Vitamin A deficiency in the diet may give rise to night blindness even when large reserves are stored in the liver.

The American and His Food: A History of Food Habits in the United States. By Richard Osborn Cummings, Assistant Professor of History, Lawrence College, Appleton, Wisconsin. Cloth. Price, \$2.50. Pp. 267, with illustrations. Chicago: University of Chicago Press, 1940.

Food habits are fundamental in the development of good diets. People differ according to race, religion and environment in the types of food that they prefer. More and more the part played by nutrition in health is becoming established and is becoming the intimate concern of governments and nations. This story of food from 1789 until our present times provides a mass of material and references from diaries, cook books and newspapers showing how our food interests and ideals have changed with the passing years. The work of the federal government in nutrition is emphasized; also the influences of war and wages. Now that we are confronted with another military emergency, more and more attention is likely to be given to nutrition. The science of nutrition is now more firmly established. The need for education in food has been increased by higher standards of living and more knowledge. A number of appendixes provide factual data not elsewhere available.

A Boy Grows Up. By Harry C. McKown and Marion LeBron. Cloth. Price, \$2. Pp. 299, with illustrations by E. R. Conerly. New York & London: Whittlesey House, McGraw-Hill Book Company, Inc., 1940.

Modern life is complicated. It is not as easy for a boy to pass from adolescence to manhood as it used to be. Any help that he can receive along the way is bound to be useful. The authors consider first the boyhood years of famous men. Then they discuss such matters as the adjustment of the boy into various organizations, the question of finances, of health, of hobbies and of jobs. Here are some nice hints on how a boy ought to act to his mother and his father, although there are many a mother and father nowadays who think they are lucky if the child will simply let them alone. There are innumerable rules of conduct, some of which sound a little comical if one takes them too seriously; for instance, "It is never good manners to slap, push, pat or nudge a girl in fun while talking with her." The authors tell the young man to wear a good, dark suit with a white shirt and plain tie to formal occasions if he has no tuxedo. Yet we have seen young men with a tie that was not quite plain panic an entire group of girls, while the boys with the plain black ties and the plain blue ties and the plain red ties gnashed their teeth in envy. Somehow this book is a little too serious and solemn about itself, perhaps enough to defeat its purpose, but there is a lot of useful information that will help teachers and parents in their attitudes to the boy it is planned to help.

Principles and Practice of Bacteriology. By Major Arthur H. Bryan, M.A., V.M.D., F.A.P.H.A., Science Department, Baltimore City College, Baltimore, and Charles G. Bryan, M.D., M.R.C.S., F.R.C.S., Royal Army Medical Corps, Poole Hospital, England. Second edition. Paper. Price, \$1.25. Pp. 410, with 76 illustrations. New York: Barnes & Noble, Inc., 1940.

This book is composed of three parts. Part 1 is concerned with principles of bacteriology and is made up of thirteen chapters. Part 2 deals with medical bacteriology and is covered in sixteen chapters. Part 3 is concerned with serology and immunity, which is discussed in three chapters; it has a glossary, National Board examinations in bacteriology and immunology, State Board questions in veterinary bacteriology, State Board questions and answers for nurses in bacteriology, serology, infection and immunity and finally Maryland State Board questions for nurses. Numerous charts are included for differentiating and classifying the various microbial species. The book has real merit in outlining and classifying knowledge in the field of bacteriology and should prove useful to the physician.

Queries and Minor Notes

THE ANSWERS HERE PUBLISHED HAVE BEEN PREPARED BY COMPETENT AUTHORITIES. THEY DO NOT, HOWEVER, REPRESENT THE OPINIONS OF ANY OFFICIAL BODIES UNLESS SPECIFICALLY STATED IN THE REPLY. ANONYMOUS COMMUNICATIONS AND QUERIES ON POSTAL CARDS WILL NOT BE NOTICED. EVERY LETTER MUST CONTAIN THE WRITER'S NAME AND ADDRESS, BUT THESE WILL BE OMITTED ON REQUEST.

BLOOD SUGAR TESTS AND PROTAMINE INSULIN

To the Editor:—I should like to clear up a matter of technic in taking blood sugar on patients who are receiving protamine zinc insulin. Should the blood sugar be taken before the administration of the morning dose of protamine or should one withhold the morning dose until after the blood sugar is taken? It has been my feeling that, since protamine zinc insulin does not have any effect for some time after it is administered, one could take a blood sugar shortly after it is administered without its having any appreciable effects on the results. I have felt that this method permits the patient to receive his daily protamine dose at the same time without varying the time of administration, as may happen if one has to wait for a blood sugar to be taken occasionally.

H. A. Slesinger, M.D., Windber, Pa.

ANSWER.—When patients are taking protamine zinc insulin the blood sugar should be determined before breakfast. In that way information is gained as to its efficiency in controlling at least the endogenous carbohydrate metabolism. Whether the blood is taken a few minutes before or after the daily dose of protamine zinc insulin is probably of little significance. Theoretically, protamine zinc insulin might begin to act immediately, but so slightly that even though its effect was added to that of the previous day it probably would not be of importance for an hour or two. On the other hand, the delay of breakfast by an hour with a patient whose blood sugar is well controlled with protamine zinc insulin might bring on a hypoglycemic reaction as a result of summation of doses, not only of one but of several previous days.

When crystalline or regular insulin is given at the same time as protamine zinc insulin, it is important that the breakfast follow within fifteen or at least thirty minutes, because if the protamine zinc insulin is acting well the blood sugar already is within normal limits and possibly even slowly falling and then the additional dose of a quick acting insulin would depress it so rapidly that unless carbohydrate was taken a reaction would intervene.

INTERMITTENT LOSS OF VOICE

To the Editor:—A white man occasionally suffers from complete or partial loss of his voice for days or weeks at a time. During these periods, close observation in hospitals has elicited no evidence of any organic cause for the disease. Neurologic examination has also been negative. None of the stigmas of hysteria are present. On no occasion has there been any apparent "asset value" to the attack. Recently I heard another physician mention something about a lecture on "phonasthenia." Do you know of any recent diagnostic or therapeutic discoveries for the complaint I have described, i.e. attacks of variable duration of complete or partial loss of voice?

M.D., New York.

ANSWER.—Complete or partial loss of the voice for a variable period of days or weeks followed by normal voice and then a return to a loss of voice, in the absence of organic disease of the central and peripheral nervous system and of the larynx, is most always a result of hysterical paralysis. In this condition the loss of the voice is an aphonia, the patient speaking only in whispers. In such cases coughing, hawking and even singing are accompanied by normal vocal sounds. This type of aphonia tends to disappear suddenly and spontaneously. The disappearance of the aphonia is usually due to the effect of emotion. Strong galvanic and faradic currents applied to the neck muscles may also cure this symptom. Some mental excitement may cause the return of the normal voice. The loss of the voice is apt to relapse easily and to become intractable with time. Has a laryngoscopic examination been made to visualize the vocal cords? Local disorders of the larynx and vocal cords such as laryngitis, papillomas and tuberculoma are occasional causes of loss of the voice. In such instances the loss is more of a huskiness or hoarseness and not a whisper.

Treatment should consist of a detailed psychiatric examination in order to determine the presence of emotional conflicts. If such are found, the patient must be made to face the facts instead of developing a loss of voice. Painful applications of the faradic and the galvanic current to the muscles of the neck have been used with success. While doing this the patient may cry or yell that "it hurts." These words will be of a normal sound.

EFFECT ON EYES OF BELLADONNA ADMINISTRATION FOR ENURESIS

To the Editor:—A girl aged 7 years is practically free from other abnormalities but has enuresis, both nocturnal and diurnal. She has responded well to medical treatment in which a tablet containing some belladonna is given. The result of taking the belladonna, however, is dilatation of the pupils, and this may impair her vision. If the belladonna is taken from the medicine, enuresis develops again. She has been checked over on many occasions by several physicians, and nothing abnormal has been found aside from this inability to control her urine when she is not taking the medicine. What possibility is there concerning the effect of the atropine and other belladonna drugs influencing her vision? Is there any possibility that she could be corrected by glasses? She has been taken to an optician who was not a physician, and he had recommended dark glasses. However, this did not seem to clear up the condition.

M.D., Idaho.

ANSWER.—In a girl 7 years old the chance that belladonna would increase the intraocular tension is slight. There might be considerable interference with accommodation, however, and if this should be the case it would be necessary for her to wear reading glasses in school. This would be especially true if she had a latent hyperopia to begin with, which should be determined by retinoscopy. Her accommodation should be checked by estimating the near point, and the proper addition for reading should be given on this basis, preferably in bifocal glasses. The risk that there would be any permanent damage to the accommodation from the systemic use of belladonna seems to be slight. The belladonna should be discontinued from time to time to allow restoration of the normal accommodation and, of course, discontinued entirely as soon as it is no longer necessary.

HYMENAL TEAR OR UTERINE DISPLACEMENT FROM BASKETBALL

To the Editor:—Can hymenal injury or malpositions of the uterus be induced or aggravated by girls between the ages of 13 to 15 playing basketball? The idea seems preposterous to me, yet it is asked in good faith by a person whose responsibility it is to arrange for and supervise athletics for girls in this age group.

M.D., Wisconsin.

ANSWER.—Hymenal injuries may occur while playing basketball, but they are of minor importance, for even an expert can scarcely tell whether a particular hymen has been torn. The hymen may be congenitally almost absent. Much more significant at examination is the relaxation and absence of fear of pain or injury on the part of the patient.

Malpositions of the uterus undoubtedly do occur as the result of a serious fall, particularly when the patient lands on her buttocks or back with a severe jolt, comparable to a fall from horseback or while skating or from a considerable height. In such cases there is usually a history of dysmenorrhea, backache or pelvic pressure dating from the time of the accident. The hazard of an injury producing a retrodisplacement is scarcely sufficient to warrant forbidding a child the pleasure of playing basketball.

TRICHOMONAS INFECTION IN MAN—SEXUAL TRANSMISSION

To the Editor:—A man aged 39 is accused of causing infection with *Trichomonas vaginalis* of a woman through sexual contact. The man himself has no symptoms of the disease, and this is also true of his wife, with whom also he has intercourse. There is no history of a reasonably close interval between the times he has relations with his mistress and with his wife and vice versa. The husband of the mistress is also free from the disease apparently. Several questions arise, namely: Is it possible or probable for the trichomonad to be transmitted from man to woman during sexual intercourse? Just how common is such a transfer if it does occur? Is it possible or probable for a man who has no symptoms of infection with the parasite to transfer the disease? Can a man act as a carrier of the parasite without having some manifestations of the disease in himself? Can a woman have the disease without her knowledge, i.e. without symptoms? Are there apt to be spontaneous recurrences of the disease even though it is apparently cured? Would sexual intercourse have any influence on the course or recurrence of the trouble? What procedures should be undertaken if one is to determine the presence of the parasite in the man if he presents no symptoms of the disease?

M.D., New York.

ANSWER.—It is both possible and probable for *Trichomonas vaginalis* to be transmitted by sexual intercourse but how frequently this occurs is not definitely known. A man can harbor the organism without symptoms and possibly act as a carrier. Many women also have *Trichomonas vaginalis* without any apparent symptoms, although the majority do have leukorrhea. Recurrence of this disease in women who have been apparently cured is common. This usually occurs after the menstrual period. In some instances sexual intercourse may be a factor provided one of the partners is infected.

The proper procedure to follow in order to establish the diagnosis of *Trichomonas* infection in man is to strip the urethra and obtain some of the discharge, if present, on a slide and immediately search for the organism microscopically after the secretion has been covered with a cover slip, using either the high power or oil immersion lens. If there is no discharge, the prostate should be gently massaged and prostatic fluid examined in the same way. Several examinations of the fluid, at least three days apart, should be made before it is said that the man does not have *Trichomonas* infection. Usually many pus cells are found in the prostatic smear when trichomonads are present. However, it does not follow that pus in the prostatic fluid indicates the presence of trichomonads.

LOSS OF LIBIDO IN DIABETES

To the Editor:—Are there any reports on the therapy of progressive loss of sexual power complicating diabetes mellitus? What forms of treatment are indicated as a trial? What other procedures should be followed? The patient in question is a man 31 years old, and ever since the opening of an apical abscess three or four years ago he has noted loss of sexual power. At the present time he is without any libido. Early during this complication another doctor treated him with androgens but without any effects. Inventory of systems elicits paresthesias of the feet and legs, slight constipation, occasional nocturia and dizziness, questionable intermittent claudication and a cutaneous rash on his hands and forearm. His past history is essentially normal with the exception of mumps without testicular involvement at the age of 16, diabetes at 19 and the opening of the apical abscess at age 28. His habits are normal. He has been taking about 20 units of regular insulin daily. Careful physical, neurologic and laboratory examinations showed the following positive findings: (1) diminished biceps and ankle jerk reflexes; (2) variation from hypesthesia to anesthesia as well as to tactile sensation over the front of the legs and foot which seems to follow the distribution of the fourth and fifth lumbar and the first sacral nerves; (3) slightly enlarged prostate; (4) eczematoid dermatitis of the hands and forearms; (5) 5 per cent sugar in the urine; (6) a trace of acetone; (7) a fasting blood sugar of 295 mg. per hundred cubic centimeters; (8) carbon dioxide combining power of 64 volumes per cent; (9) Wassermann reaction negative and blood count normal. At the present time his diabetes is controlled and his urine is sugar free.

M.D., California.

ANSWER.—The patient has diabetes mellitus of twelve years' duration with onset of the disease at the age of 19. The condition presumably has been uncontrolled throughout most of his diabetic lifetime because, prior to the recent treatment, he was taking only 20 units of insulin daily, his urine contained 5 per cent sugar and the fasting blood sugar was 295 mg. per hundred cubic centimeters. In addition he shows symptoms and signs of the neuropathy encountered in uncontrolled diabetes.

Lumbar puncture, including study of dynamics and careful examination of the spinal fluid, is indicated. In the neuropathy seen in diabetes, it is characteristic to find an increase in the total protein of the spinal fluid unaccompanied by an increase in cells.

If a complicating neurologic condition unrelated to diabetes is ruled out, then the best treatment includes control of the diabetic condition, bringing the weight up to standard with diet and insulin (using protamine zinc insulin with supplementary doses of regular or crystalline insulin, if needed), the development of his muscles and liberal provision for vitamins, particularly the vitamin B complex. There may, of course, be a psychic element.

ANESTHETIC FOR DRUM MEMBRANE

To the Editor:—What is considered to be the most effective local anesthetic (or combination) for use in paracentesis of the membrana tympani?

M.D., Washington.

ANSWER.—There is no really satisfactory local anesthetic for use in paracentesis of the membrana tympani. Various preparations have been used. Thirty per cent phenol in glycerin affords some analgesia. Bomain's solution (equal parts of cocaine, phenol and menthol) has its supporters and does lessen the pain, but its use is not without danger. Some otologists prefer cocaine crystals (10 per cent) in aniline or in equal parts of aniline and absolute alcohol. Unfortunately epidermal desquamation of the canal is a common sequel to topical medication.

It is of interest to note that when paracentesis is required in such diseases as acute serous otitis or when medication is injected through the normal drum membrane (e. g. thyroxine, as in otosclerosis), no anesthetic is actually necessary. Opening of such a noninflamed drum is almost painless, and it is precisely under these conditions that proponents of local anesthetics have claimed the greatest success. The best anesthetic for paracentesis in acute suppurative otitis media is a short gaseous anesthetic when this is available.

CRUSTING NASOPHARYNX IN SINUSITIS

To the Editor:—A patient is suffering from chronic sinusitis. The discharge drops into the posterior nasopharynx, collecting there and forming a "scab" the size of a quarter (24 mm.) which necessitates instrumentation for removal. This has to be done every three to five days. Will you please give me some advice on how to prevent this "scab formation" besides the usual treatments for chronic sinusitis. The anatomy of the nasopharynx is normal.

G. F. Spielhagen, M.D., Iowa City.

ANSWER.—Assuming that the sinusitis is being cared for adequately, there remains the local condition in the nasopharynx to be treated. This may prove to be obstinate. Following the removal of the crust, the mucosa may be painted with increasing strengths of Mandl's pigment. A prescription for this is iodine 4 Gm., potassium iodide 1.3 Gm., peppermint oil 0.3 cc., glycerin 30 cc. As the treatment progresses, the strength of the iodine may be increased.

A bland oily preparation may be used in the nose several times a day to coat the mucous membrane and so prevent drying and crusting of secretions. The possible danger of lung irritation from such oils, however, must be considered. Small doses of potassium iodide by mouth are often found useful for this purpose.

This discussion assumes that the nasopharyngeal condition is secondary to the nasal infection and is not due to a retention cyst in the vault of the nasopharynx or to an atrophic change in the mucosa or some such similar state of affairs.

PROBABLE CHRONIC CYSTIC MASTITIS

To the Editor:—A married woman aged 42 had an amputation of the left nipple ten years ago for what was apparently a nonmalignant disease. The breast contains variable-sized movable nodules as evidence of chronic mastitis. Comparable nodules are found in the opposite breast. They have been present for several years without changes noted. What are the possibilities of malignant disease in a breast of this type? Assuming that an intraductal cancer should develop and assuming that the early symptom of discharge would necessarily be absent, is it conceivable that cancer would become inoperable before adequate recognition was possible? Are statistics as to cancer in breasts of this type available? Would the absence of the nipple coupled with the presence of the chronic mastitis and a positive family history of cancer justify resection of the breast?

M.D., Wisconsin.

ANSWER.—If one is to judge by the description, one is probably dealing with a case of chronic cystic mastitis. Furthermore, if the clinical diagnosis of chronic cystic mastitis is correct, then one can be reasonably certain that the patient has little chance of having a carcinoma in the breast now or at a later date. On the other hand, it is often difficult to make a definite clinical diagnosis as to the exact nature of lesions of the breast, and if there is any doubt as to the correctness of the clinical diagnosis the patient's breast should be amputated and subjected to a thorough pathologic examination.

BILATERAL COMPLETE CRYPTORCHISM IN EIGHT YEAR OLD BOY

To the Editor:—What is the proper therapeutic procedure in a boy aged 8 with complete bilateral cryptorchism when the testes cannot be palpated in the scrotum or in the inguinal canals? He is otherwise normal, mentally and physically. What is present day opinion on treatment with gonadotropic substance? At what age should treatment be started?

Irving Saffran, M.D., Dorchester, Mass.

ANSWER.—In a patient with bilateral intra-abdominal testes it is improbable that the gonadotropic substances will produce descent. A trial of this material for six to eight weeks at the most, using approximately 500 international rat units three to four times a week would probably not be harmful. If at the end of this time the testes had not descended, an operation should be considered, only one side at a time being done. Treatment should begin at once.

BIFOCAL GLASSES

To the Editor:—Do you know of a book or article that discusses types of bifocals for barbers and carpenters? Some people are dissatisfied with bifocals and a discussion of the subject would be of value to me. As you know, of late years there have been a number of bifocals on the market.

W. B. Hubbard, M.D., Flint, Mich.

ANSWER.—The problem of bifocals is the problem of ordinary refraction. There is no special book or even article dealing with the aspect of the problem requested. However, any of the standard textbooks on refraction, Thorington, Duke-Elder and others, discuss the required strength of the additional reading segment that may be incorporated into bifocals. The experienced refractionist tests in each case the requisite working distance and bases his prescription on the data thus obtained.

PHYSICAL FITNESS IN TERMS OF PHYSIQUE, DEVELOPMENT AND BASAL METABOLISM

WITH A GUIDE TO INDIVIDUAL PROGRESS FROM
INFANCY TO MATURITY: A NEW
METHOD FOR EVALUATION

NORMAN C. WETZEL, M.D.
CLEVELAND

A new method for evaluating physical fitness, based on the use of a grid to aid in this purpose, is described in the present paper. The method is particularly adapted to clinical work, since it requires as initial measurements merely routine data on weight, height and age. In return for these data, and these alone, it supplies objective ratings on physique (body build), development, nutritional grade, physical status and age advancement and, in addition, information on certain other items of importance. A concrete record is thus constructed which complements the subjective result gained by clinical examination. It is, therefore, a special purpose of this paper to show how the grid may aid medical examiners in judging the individual physical state and progress during the long period extending from the close of infancy to fully established maturity.

THE NEED FOR A NEW METHOD

The need for an instrument of this kind is widely felt. Souther, Eliot and Jeness¹ have remarked:

"With the public conscience demanding protection of the health of the child and the school medical services expanding to meet this need, the development of a simple economical but accurate means of assessing the child's state of well being or physical fitness is in order."

Today much of the information in medical records which refers to physical fitness is summed up in very general phrases such as "well developed and well nourished." In spite of countless attempts to standardize various physical dimensions and repeated exhortations to use them with understanding, physicians, school and public health officials and even laymen have come more and more to treat simple physical measurements, such as weights and heights, as all but worthless. The situation has not been remedied by the introduction of more extensive measurements comprising so-called batteries of tests.² Not only have recommendations been made to measure many different diameters, lengths and circumferences of the body and even thicknesses of the skin and subcutaneous tissues in the trunks and limbs, but also rather ambitious plans have been

proposed to estimate the content of vitamins, hormones, minerals and other substances in blood and urine, as well as to undertake roentgen studies of bones and performance tests on heart, lungs and muscle.³

This trend toward making the routine of examination and the methods of dealing with the troublesome question of physical state continually more complicated has been encouraged by repeated failure to establish consistent and reliable standards of comparison for simple physical measurements.

The difficulties in the problem are important and should be touched on briefly. The success of estimating physical fitness by clinical examination has found scarcely more than 50 to 70 per cent agreement between experienced physicians.⁴ Tables of height and weight, even when they are used in conjunction with medical estimates of physicians, have repeatedly been shown to possess no more than 60 per cent overall reliability in differentiating between persons of satisfactory and of unsatisfactory physical grade.⁴ Finally, indexes of nutrition, or of "body build" as they have been variously called,⁵ have failed notably to select subjects in under par classes.^{5a}

From the standpoint of national health the situation has been frankly discouraging, in spite of ever increasing funds and efforts devoted to the study of child development. Two facts are striking:

In the first place, no one denies that the tests mentioned, as well as others that could be enumerated, have their own proper place, namely in private practice or in research, and yet even then chiefly under conditions of hospitalization. But no matter how worthy or how well deserved the application of these intricate technics may be in selected cases in which time, expense and other items are of no great consequence, they remain, without question, thoroughly unpractical for large groups and hence precisely where the need for a screen is usually greatest.

Meanwhile, measurements of height and weight are being taken with routine care and also with about the same attention paid to them as to a morning bath, namely as part of a "well organized health program." Under the circumstances, those concerned with child welfare, including (in certain communities) nurses and teachers in addition to medical officers and private physicians, have continued to assess a child's physical makeup by methods long recognized as crude and not trustworthy but nevertheless still in use because of the want of anything better for the purpose. The present scheme, as embodied in the grid, is offered to fill this urgent need.

While the demand for a reliable aid to medical examiners in evaluating physical fitness is, as just outlined, an important stimulus for submitting a solution to the problem, no new method, however accurate or reliable,

should be proposed unless it meets, in addition, the three conditions stipulated by Jones.⁶ These, in brief, are:

1. Measurements should be restricted to those which can be made in routine examinations at office or school.
2. No recalculation of basic data should be required.
3. No extra time or labor should be involved.

These are severe conditions but, as the present paper shows, they can be and have been completely met.

THE ROLE OF GROWTH AND DEVELOPMENT

From the clinical point of view, it is axiomatic that a child who fails to grow properly is not healthy and that such a child, accordingly, should become the subject of medical examination. Again, from a broader point of view, the chief burden and concern of parents is to provide the most favorable conditions for growth and development of their children. Similarly, the main object of all organized child health work is to facilitate growth

of progress. Now, as far as young subjects aged from 2 to 20 years are concerned, nothing so completely characterizes them in these two respects as their own growth and development. But a child's proper development depends implicitly on its proper growth, and this in turn depends not only on proper food supply but on proper physiologic use of food. Satisfactory progress implies maintenance of this delicate balance between food, digestion, metabolism, nutrition, growth and, finally, development. In a complicated chain such as this some variation of response is inevitable. Differences become especially imposing if observations are extended to many children. Such variations, however, have sometimes been taken to signify that growth is too irregular to have any valuable diagnostic worth. There are, on the contrary, some very significant events of growth and development which recur with startling regularity. Fortunately, both the regular and the irregular features can be detected by the grid, and one is thus able

to obtain a clearer picture than otherwise of the causes that give rise not only to variation in the individual subject from time to time but also to those physical differences that distinguish person from person.

GRID TECHNIC OF EVALUATING PHYSICAL FITNESS

A grid rating of physical condition is established in the following way: Measurements on weight, height and age, the traditional data collected over and over again in everyday clinical work, are entered, according to directions, on the grid illustrated in figure 1. From a point so plotted, or from the curve defined by several points representing successive observations, it becomes immediately possible to elicit quantitative information on all the items listed in table 1. The first five are necessary and also sufficient for an objective rating of physical fitness; the remaining items have only accessory though often valuable significance. If a single observation (one point only) is available, information on item 3 is presumptive and not final until it is definitely established, as explained later, by a subsequent measurement.

Under ordinary conditions the changes in item 1 through item 8 (table 1) are going on simultaneously throughout adolescence. This has always been a major obstacle to the appraisal of physical fitness by other methods. A characteristic and important property of the grid technic, however, is that it enables an examiner to measure and consider each item separately or in any combination that might be required.

Besides information on the tabulated items, one obtains, for successive annual or semiannual observations, not only a record of progress already achieved and an impression as to how satisfactory this has been but also an indication of what forthcoming progress may be expected for each particular subject in the near as well as in the more distant future.

Fig. 1.—Left hand panel: the grid described in the text, made up of the oblique system of seven principal channels of constant physique subdivided by isodevelopmental level lines. Right hand panel: representative age schedules of development (auxodromes) with percentage of children on or ahead of each schedule, showing how widely separated in time (age) children of the same developmental level may actually be; boys are represented by the solid lines, girls by the broken lines. The small dots in the M channel identify the successive yearly levels indicated by the 67 per cent curve, which is taken as the standard of reference; a child whose curve is ahead of this is advanced in development, one whose curve follows behind the standard is retarded in development. The open circles O represent the developmental progress of subject F from February 1892 to February 1908;³ the solid circles ● represent subject D from September 1933 to September 1940. Estimates of basal heat production and daily caloric intake are read directly for the corresponding level and sex. (The original chart measures 9 by 11½ inches.)

and development, whether this is explicitly stated or not. There is, in each of these endeavors, an unmistakable implication that deviations in growth and development are connected with changes in health, and even that they may constitute initial signs of otherwise unsuspected disease. For all these reasons the present method of evaluating physical fitness has been specifically designed to provide tangible access to the phenomena and events of growth and development.

The chief principle underlying the grid technic is, therefore, the consideration of the individual child as a whole and especially in relation to his own past record

6. Jones, R. H.: Physical Indices and Clinical Assessments of the Nutrition of Schoolchildren, *J. Roy. Statist. Soc.* 101:1 (Part 1) 1938.

The Grid Itself.—This is shown in the left hand panel of figure 1.^{6a} It consists of seven principal channels of physique, symmetrically disposed about the middle, or *M*, channel and diagonally traversing the field graduated in metric and customary units of weight and height. The distance along the channels is subdivided equally by parallel iso-developmental level lines.

The supplementary charts in the right hand panel contain (a) five representative curves henceforth referred to as auxodromes,⁷ which show how upchannel progress for both boys (represented by solid lines) and girls (represented by broken lines) is scheduled to proceed with increasing age, and (b) a scale aligning basal heat production to developmental levels.

The foregoing elements (grid, channels, level lines, auxodromes and basal heat production values) will now be described more thoroughly in connection with a detailed explanation of the specific meanings that pertain to the various items listed in table 1.

Channels of Constant Physique.—The seven principal channels designated A_3 , A_2 , A_1 , *M*, B_1 , B_2 , B_3 (the *A* and *B* denoting above and below middle *M*, respectively) are straight line paths for the duration of school life, that is from 6 to 18 years and beyond. During the preschool period, however, the channel trend is changing continuously, as shown by the dotted curves. Final settling into a channel may be delayed a year, but only in exceptional cases will this be later than the age of 8 years. Thenceforward healthy development continues in an established channel as though this were a preferred path, notwithstanding its apparently narrow width.

The records of two boys, F from 1892 to 1908 reported by Guttman⁸ and D from 1933 to 1940,

TABLE 1.—Items Entering into the Grid Evaluation of Physical Fitness

2. Developmental level	6. Maturation
3. Nutritional grade	7. Basal heat production
4. Physical status	8. Daily caloric intake

shown respectively by the open and solid circles in figure 1, are evidence of the tendency to proceed channelwise. This fundamental property of growth and development has obviously not been altered in the last forty years. The grid thus enables each subject to become his own standard of comparison.

This singular characteristic of healthy development to become channelwise and, in so doing, to keep body

build or physique constant, is clearly illustrated by the silhouettes shown in figure 2, which have been constructed to standard size with utmost care. From these it is plain that body shape has remained substantially the same during a period of two years in which development has advanced from the 117.5 to the 142 level. The silhouettes indicate the type of physique characteristic of subjects in channel A_3 .

Accidental variations⁹ such as occur in all observations are astonishingly small and always well within the width of a channel. Indeed, it may be stated as a simple and practical rule that normal variations do not exceed one-half channel per 10 units of advancement. Changes greater than this are cause for thorough physical examination and investigation. Continued cross channel advance, bearing left or right, is definite evidence of systematic deviation which, as shown in the next section, will soon lead to recognizable changes in body build and nutritional and physical states.

Paths of Changing Physique.—Two, and only two, types of changing physique occur. They are illustrated by the standard size silhouettes and their respective curves in figures 3 and 4. The curve directed upward leads toward obesity, whereas the other, directed downward, is clearly indicative of oncoming "malnutrition." In both cases a change in the channel has taken place and therefore a change in physique. In any case (fig. 4) the change in physique is measured by the projection of the curve on a developmental level line as shown by the arrow.

So long as external and internal conditions remain the same, no deviation of path is to be expected. But if deliberate therapeutic changes in diet, for example, are introduced, corresponding changes in the curves will follow.

Thus, in the severely malnourished boy in figure 5, whose original silhouette quite clearly defines the state of "nothing but skin and bones," treatment in a convalescent hospital resulted in the improvement displayed in the curve and in the second silhouette.

The opposite effect is illustrated in figure 6, which shows the results attained in an obviously obese child whose only fault was overeating and who became, under supervision, a healthier child as she entered the normal channel of medium build, A_1 , for which her natural frame was suited and presumably intended.

A plotted point in any of the seven principal channels or in any that lie above or below them gives an immediate indication of body build or physique at that point. Study of upchannel and cross channel progress has sufficiently indicated that the obese-plump,

stout, stocky types are found above and in the upper *A* channels; the medium types of body build are represented in the three outer channels; and, so far as build itself is concerned, the genetically slender, linear, thin

examples are in the lower *B* channels (fig. 7). A change in physique, moreover, is measured simply by a change in the channel.

Developmental Level.—Physical development is measured on the grid by means of the isodevelopmental level lines. These subdivide the distance along the channels into equally spaced units, each 10 units being shown by solid and each 5 units by broken lines. The zero base is taken somewhat below the entrance to the linear path and corresponds to the level which marks the end of infancy and thus the beginning of adolescence.¹⁰ All points on any level line are equally removed from the zero base line. The shortest path for development is strictly along the channel, all other paths being longer, though this fact cannot be verified in

Fig. 4.—G. M., a malnourished boy aged 9 years with a telltale direction to his curve. Arrow points to graphic measure of change in physique. His developmental level of 32 at 9 years signifies that he is retarded by three years, thus giving him a developmental age of 6 years, according to the 67 per cent standard.

figure 1 owing to the effect of scale. Thus development may be measured independently of physique and independently of upchannel or cross channel progress, a result hitherto impossible with any of the usual "indexes of nutrition" or body build. Hence, 2 subjects both of whom have arrived at level 100, no matter how or in which channel, are specifically to be considered as being on the same developmental level. For the present, the units of development are arbitrary. In a later section their calibration in terms of power, or calories of basal heat output daily, will be explained. This is also a new result showing that physical development need not be considered a thing apart, but rather that structural change and physiologic (metabolic) change can be made co-servants in clinical appraisal.

Nutritional Grade.¹¹—As indicated before, channel-wise progress is the preferential path pursued in health. It is, moreover, the only mode of developmental advance which proceeds without change in physique. Optimum nutrition, accordingly, may be defined as the sum total of those processes which together enable development to proceed along the contour lines of one's inherited physique. Thus normal or optimum nutrition in the clinical sense is indicated whenever the slope of a given child's curve is equal to that of the channel, provided progress is also on a satisfactory time schedule, as explained later.

If, however, the gradient or slope of a particular curve departs from that of the channel, one of two opposite types of nutritional state is in the making. Curves proceeding less steeply than the channel will be associated not only with change in physique toward a more slender body build but also with a state of comparative malnutrition. Causes for this kind of progress need not, of course, be traceable solely to defective diets,

for all possible causes—e. g., dental caries, tonsils and adenoids, fatigue and poor hygiene—will likewise require to be looked into.

Similar considerations hold for curves proceeding more steeply than the slope of the channel system. In this event, change in physique toward ultimate obesity ensues, and the subject, meanwhile, is becoming "over-nourished." Here, again, diet alone need not be at fault, for the endocrine system will also demand attention.

To put these results briefly, it may be said that a curve of development which shows significant departure from the channel slope indicates simultaneous changes in (a) nutritional grade and (b) body build; each change is separately indicated by the grid. The slope or gradient of the curve is the measure of what clinicians, in assessing physical fitness, call the state of nutrition, whereas the projection of the curve on the channel axis is, as before, the measure of coincident change in body build.

Physical Status.—This otherwise troublesome term now takes on a perfectly definite and distinct meaning of its own which may be explained as follows: It signifies precisely that resultant physical state which has been produced by the combined effects of growth, development and nutrition cumulated to the moment in question. Graphically, some particular physical state will therefore be associated with every height-weight point in the grid field. But, since the complete determination of physical status depends on knowledge of the past history, the specific state in a given subject associated with any point cannot be unconditionally defined until the mode of approach to that point (of which there are an infinite number) has been revealed. This is equivalent to saying that the graphic determination of physical status (item 4, table 1) depends on all three preceding items in the table. It also means that the combination of items 1, 2 and 3, which together give 4, can be represented graphically not by a height-weight point itself but rather by such a point as terminus of a directed line segment (vector) originating in some previous observation.

On the practical side, fortunately, the impossibility of determining the mode of approach to a given point by a single observation, and hence the limitations thus imposed on the determination of item 3, does not prevent an approximate evaluation of physical status,

Fig. 5.—J. H., another undernourished boy, showing response to convalescent care. The change in physique is characteristic and is measured by the projection on the cross channel axis.

as the following considerations show. Every point, when plotted, may be resolved by means of the grid into two parts: (a) the physique component, as represented by the channel in which the point lies, and (b) the developmental component, as given by the respective level scale. This resolution, therefore, takes care of items 1 and 2 in table 1, with the result that, to every point, there corre-

sponds one, and only one, combination of physique and development. Knowledge of this combination, which every point gives, constitutes the greatest share of

10. Wetzel, N. C.: On the Motion of Growth: XVI. Clinical Aspects of Human Growth and Metabolism with Special Reference to Infancy and Preschool Life, J. Pediat. 4: 465 (April) 1934.

11. With due regard for already established meanings attached to the term "nutrition" itself, and especially to the fact that it has been used on some occasions to refer simply to single elements in the diet, on others to the whole nutritional process and, finally, in clinical work to various rather well recognized states of health, there is need for a cognate term which will connect nutrition per se with the various types of developmental progress already described.

information required for a complete estimate of physical status. Hence, even if measurements are limited to a single observation, a graphic estimate of physical status can at least be partially made. It remains provisional until a second observation establishes the trend required for a determination of the nutritional gradient (item 3).

TABLE 2.—Grid Ratings of Physical Status Corresponding to Location of Points in Various Channels

Physical Status	Channel	Per Cent of 2,000 Cases at Developmental Level = 100 and Economic Tenth = 3.4
Obese (O).....	A ₄ , A ₅	6.8
Stocky (S).....	A ₃ , A ₂	9.4
Good (G).....	A ₁ , M, B ₁	61.6
Fair (F).....	B ₂	13.9
Borderline (B).....	B ₃	5.9
Poor (P).....	B ₄	2.4

Pending this, however, a tentative estimate is justified on the ground that subjects of "medium build" and "good nutrition" are in and tend to progress along the center channels; the stocky types, whose nutrition is not in question, travel in the upper two channels, whereas the slender, linear types, whose nutrition is often doubtful, are found in the two lower channels and below (fig. 7). For ready reference the grid ratings of physical status as determined by the location of individual plotted points are given in table 2.

Thus, according to table 2, any point lying in channel A₃ represents a subject of the stocky and well nourished type. A point in B₂ represents a child whose physical status can be considered only "fair," that is, in doubt, but not yet so greatly in doubt as a point in B₃, which is "borderline." In A₄ and above are those of increasing grades of obesity beginning, perhaps, with the dignified "stout" or "overly plump." In B₄ and below are those whose physical status is frankly "poor."

No difficulty will arise in distinguishing between the meanings here placed on "physical status" and "physique" if it is remembered that the latter refers only to body build and is therefore but one of the items required to define physical status, the others being items 2 and 3 of table 1.

As the final column of table 2 shows, one may expect roughly 30 per cent of children to be in a physical state requiring medical investigation and supervision. This estimate agrees with earlier observations¹² and serves to show that the grid technic is capable of expressing independent ratings which may be used by medical examiners as a guide in screening the under par child.

The subjects in channel B₂ (fair) are of special interest. It has been found¹³ that physicians cannot agree by more than 50 per cent on medical ratings of children in this channel, although they agree among themselves on 94 per cent of subjects in all other channels, a figure which greatly exceeds previous trials at correlating medical opinion with some objective measure of physical state and nutrition. For this reason a child in the fair or B₂ channel should routinely become the subject of examination in order to determine whether heredity and background account for its being there or whether disease is at work. Similar warnings hold true for the borderline B₃'s. It may be taken for granted that the children of the B₄ group are "poor" and require not merely examination but treatment as well. Those

above A₃ likewise need careful watching, first to prevent their going still farther beyond the outer channel and second to remedy their obesity. A course of development directed upward and out of bounds, when once initiated, tends to proceed with all but unbelievable momentum (fig. 3).

Relative Age Advancement or Retardation.—Until now, no mention of the time element in developmental progress has been made or required. Attention has been directed solely to matters of body build, developmental level, nutritional grade and, lastly, physical status in which all other elements are embodied. This order of procedure does not signify that time or speed of progress is not essential to a final rating; on the contrary, it helps to emphasize the important role of age, which may next be dealt with from a more appropriate point of view.

*The Auxodromes.*⁷—These curves, which are shown in the right hand panel of figure 1, measure relative age advancement or retardation as the case may be. To put the matter somewhat differently, it may be said that the curves display advanced, normal and retarded patterns of developmental progress and may, accordingly, be taken to show how physical development proceeds with respect to age during its channel course on the grid. These curves are, in a very real sense, schedules of progress which indicate how far the advanced, regular and retarded child may be expected to have developed at a given age.

The percentage figure at the lower end of each curve indicates the relative number of children who are on or ahead of the respective schedule. Thus, only 2 per cent will have advanced in their development at successive ages as far as or farther than the uppermost curve calls for; 67 per cent will have reached the levels given by the center auxodrome on or before the corresponding ages to which it refers; finally, 98 per cent of children will therefore certainly have advanced as rapidly as the lowest curve, so that only 2 per cent remain behind this in their development. The 67 per cent curve is taken as the standard of reference by which advancement or retardation in a given child may be measured.

Distinction is made between boys and girls. During the earlier stages from 5 to 9 years, to which Stratz¹⁴ referred as "neutral childhood," boys and girls follow a common course to the lower point of bifurcation. Thenceforward girls (broken curves in figure 1) tend quite characteristically to proceed ahead of boys (solid

Fig. 6.—J. D., an obese girl showing a conspicuous change in physique as a result of dietetic therapy.

curves in figure 1) toward their own upper boundaries and with earlier cessation of development.

The average rate of progress by these schedules is approximately one level line a month. This figure may

13. Discussed in a later section dealing with statistical background.

14. Stratz, C. H.: Der Körper des Kindes und seine Pflege, ed. 11, Stuttgart, F. Enke, 1928.

conveniently be referred to as "a point a month" for developmental advancement during all adolescence irrespective of seasonal effects. However, as the slight but definite change in the slope of the curves clearly shows, development does not take place at constant time rates. Following the steep rise at 6 and 7 years there is a clear-cut tendency to proceed more slowly, the lag effect being most conspicuous in the lowermost curve. The lag, in turn, is followed by the final episode of acceleration associated with puberty.

The set of five auxodromes thus represents a family of curves that may be used as a direct guide with which to compare the personal curve of the subject whose data are located in the channel. One is merely required, when plotting a height-weight point in the grid, to read the corresponding developmental level and then to plot this against the subject's age. A series of such points automatically constructs that subject's own auxodrome, which will be found in health to follow the illustrated pattern quite faithfully.^{14a} Failure

level. Their physical status will likewise be the same, namely of "medium build" and "good nutrition." Now they may or may not be of the same age. If they are, and this is 11.6 years, their points will both be on the center auxodrome where the 100 level line intersects the 11.6 year mark. They would, accordingly, be equally advanced with regard to age and they would, for the moment at least, be on the same schedule. If, however, one of the subjects is only 8.35 and the other 14.25 years old, their points will be placed, instead, on the widely separated age schedules represented by the intersection of the 100 level line with the 2 and the 98 per cent auxodromes, respectively. This would indicate a difference of almost six years in relative advancement between them, the former being about three and five-tenths years in advance of "normal," the latter about two and five-tenths years retarded as compared with the "normal" 67 per cent curve.

Developmental Age.—An alternative method of estimating relative advancement or retardation is to determine a subject's developmental age. This is obtained at once by reading the age at which the 67 per cent norm intersects a given developmental level. For example, the child whose level was previously stated to be 100 at 8.35 years by actual age is said to possess a developmental age of 11.6 years. Similarly, a level of 130 attained at 15.3 years corresponds to a developmental age of 13.7 years. The former child is advanced, the latter retarded in development.

This method of assessing development is comparable in some respects to, and serves the purpose of, determinations of skeletal age. It is, however, much simpler, entirely objective, less time consuming and less expensive. In short, it avoids the disadvantages connected with roentgenologic determinations of skeletal age.

Maturation.—The onset of puberty is usually a perfectly definite and recognizable event, by long experience awaited between the twelfth and sixteenth years. Individual variations, especially when the onset seems premature or too long delayed, may be a source of concern. The average age at onset, as indicated in an earlier paper,¹⁰ is remarkably close to 13.6 years for both sexes. This estimate was fixed by the age at which the final deceleration of growth in weight had been found to reach its maximum value. Reports which Greulich¹⁵ has collected give almost exactly the same average age. Concerning individual differences, on the other hand, Shuttleworth¹⁶ has found that girls who mature early are significantly larger than girls of the same age who mature late. By the grid technic this means that girls on the advanced auxodromes tend to mature earlier than those on late schedules. In fact, a study of the question shows that the auxodromes of figure 1 are quite reliable in predicting the onset of menarche. The rule is that this may be expected in the neighborhood of the greatest upper curvature. Puberty in boys is similarly to be expected on their own curves. The greatest upper curvature, moreover, occurs at the very age at which the final deceleration of development is maximum. These results suggest that

Fig. 7.—Six different subjects with corresponding grid positions, illustrating, in the first place, the difference between stocky and linear types paired at the same developmental level and, in the second place, the constancy of physique for points located at different levels in the same channel. Note that subject 5 is visibly more stout than subjects 1 and 3, the point 5 lying in channel Aa. Note also the identity of the silhouette of subject 3 in this figure with the silhouette in figure 2 at level 118 in Aa.

to do so, as in the case of deviation from the channels, is likewise cause for investigation. The most common abnormal result is the tendency for an auxodrome which has been following one of the more advanced courses to fall behind its expected schedule by a year or more. This may be the first sign of physical trouble and may appear even before the child's developmental curve has departed from its own channel. It signifies that development is being slowed down surreptitiously. Thus, upchannel progress may be considered normal only when it is proceeding at a rate sufficient to maintain advance comparable to that of the standard auxodromes in figure 1.

The significance and mechanism of the age schedules may be brought out by a few examples. Suppose, to begin with, that 2 children are placed on the 100 level line in channel M. They will possess the same physique and be at the same developmental

level. Their physical status will likewise be the same, namely of "medium build" and "good nutrition." Now they may or may not be of the same age. If they are, and this is 11.6 years, their points will both be on the center auxodrome where the 100 level line intersects the 11.6 year mark. They would, accordingly, be equally advanced with regard to age and they would, for the moment at least, be on the same schedule. If, however, one of the subjects is only 8.35 and the other 14.25 years old, their points will be placed, instead, on the widely separated age schedules represented by the intersection of the 100 level line with the 2 and the 98 per cent auxodromes, respectively. This would indicate a difference of almost six years in relative advancement between them, the former being about three and five-tenths years in advance of "normal," the latter about two and five-tenths years retarded as compared with the "normal" 67 per cent curve.

maturation is not directly related to age or to size but rather to a more fundamental and critical property, namely maximum deceleration of growth and development and through this, only indirectly, to age.

Basal Heat Production.—Owing largely to technical difficulties in obtaining satisfactory metabolism tests, the determination of basal heat production has been limited in practice almost entirely to those subjects suspected of disease. But aside from the very real difficulties in getting basal and hence comparable records, another drawback has been the disturbing number of discrepancies among a variety of standards about which there has been almost endless dispute.

The new standards of basal heat production erected on the right hand scale in figure 1 and aligned directly to developmental levels are included in the grid technic of evaluating physical fitness for three main reasons: (1) because of the utter simplicity by which estimates of metabolism may now be made, without correcting for body size, physique or age, the only step required being to read the value of heat output that corresponds to the developmental level in question; (2) because of the extremely important advantage of being thus enabled to check pure physical development by entirely independent physiologic measurements of daily energy turnover and vice versa, and (3) because these standards, based on developmental level, can be shown to possess a coefficient of variation as small as, or even smaller than, those of other methods of estimating basal metabolism from the physical measurements of human subjects.

A more complete discussion concerning the theoretical aspects of this problem, with special reference to the derivation of the present standards, will be given in a forthcoming paper. Here it is sufficient to state that they have been adequately tested out against many individual sets of observations, including, besides my own, those reported by Lewis,¹⁷ de Bruin,¹⁸ McKay,¹⁹ Stark,²⁰ Newburgh,²¹ Talbot, Wilson and Worcester²² and others.²³ A single example may be briefly cited: In two hundred and seventy-one tests on 41 girls between the ages of 2 and 12 years, Lewis found the mean coefficient of variation of heat output in calories per hour referred to weight to be 4.9 per cent; all the other six methods he used to express metabolism gave values higher than this. For the same

group of girls the grid method of determining their basal heat production from their developmental levels gives a coefficient of variation of 4.6 per cent. This figure is just slightly below Lewis's but far below the 11 per cent variation reported by Talbot and his co-workers,²² who also, however, found their own group of subjects to be "internally" more variable than others whom they examined.

The present method, accordingly, offers the encouragement that clinical distinction between normal and abnormal states of metabolism can be made with greater accuracy and less uncertainty than before.

A final point may be mentioned briefly. Basal heat production as here aligned to and estimated from the developmental level alone, without correction of any kind, is wholly independent of a child's physique. Specifically, several children, each in a different channel, will have the same standard heat production, provided only that they are all on the same developmental level and all in good health. The true significance of this fact is easily arrived at, though it may not be at once apparent. Heat production clearly has little or nothing to do with the bones but is concerned instead with the soft tissues. The bony skeleton occupies the chief place in the list of elements which determine body build. Hence, on a priori grounds physique itself should contribute little or nothing to daily heat production. In this connection it may be recalled that the grid resolves a given point into two components, only one of which is now seen to be concerned with heat production, for no premium is charged to the account of physique

nor is any profit rendered to a subject who possesses one rather than another; but there is an unavoidable price that must be paid in real energy for every step of developmental advancement, and that price is the same for all subjects of the same sex.

Daily Caloric Intake.—The scales for basal heat production also serve as a practical guide for estimating the daily caloric intake. This figure is always required for computing diabetic, ketogenic, reducing and other special diets, though it is often neglected in the control of normal or regular diets. To obtain the maximum daily caloric intake for either sex at any developmental level one has merely to multiply the corresponding basal heat value by 2. Average values such as those given in the White House Conference Reports²⁴ are, of course, somewhat lower, the factor being 1.9 for boys and 1.8 for girls. The 10, 20, 30 and 50 per cent above basal values used in calculating reducing diets are likewise easily computed.

Measurements.—Circumstances do not always permit net weight and height to be measured. It is therefore another advantage of the grid technic that any method of taking height

Fig. 8.—Frequency distributions of 4,045 individual children with respect to physical status (compare with table 2). The distribution again represents that at developmental level 100. Economic tenth = 5.3. All children had 6 to 12 year records.

and weight, consistently employed and suitable to the scene of examination, may be used, for the effect of indoor clothes plus shoes is merely to displace true net values along the same channel by approximately 3 to 5 units, because clothes weight is compensated by moderate heel height.

No measurements other than those of weight, height and age are required. These, moreover, may be taken in either metric or customary systems with identical results. A child's body build or physical or nutritional status should not be made to depend on the purely arbitrary choice of units of measurement, as has so frequently been the case. This defect invalidates much previous work on the subject. *Body build is the same whether it is measured by meter rule or yardstick.*

Other measurements, viz. iliac (bicristal) diameter, chest circumference, bisacromial width, sitting height, are not needed in the present method, since the grid with benefit of height-weight data alone is sufficiently sensitive for clinical purposes to detect measurable changes in physique.

It should be emphasized, finally, that the usual accidental variations in measurements of this kind are allowed for by channel width and that any difference greater than one-half channel per 10 units of advancement must be regarded as systematic until proved otherwise.

STATISTICAL BACKGROUND OF THE GRID TECHNIC

The grid has been tested in a number of ways. In the first place more than twenty-five thousand paired sets of measurements on 4,000 children have been individually analyzed. Among these were twelve thousand sets of measurements on 2,093 Cleveland school children whose grid ratings of physical status were compared with clinical appraisals rendered by school physicians.²⁵ No published records, except for a few examples, supply this crucial combination of observations. While a detailed account will be reported elsewhere, a few important results may be stated here. Gross agreement between estimates made by the grid and those made by physicians turned out to be 87.5 per cent, which significantly exceeds the 60 to 65 per cent figure reported by other workers.²⁶ Half the discrepancies occurred among children whose curves and points fell into the B_2 (fair) channel. These are the children on whom physicians themselves find it difficult to agree in more than 50 per cent of cases. Consequently, agreement between the grid and physicians on subjects in all the other channels rose to 94.5 per cent.

Of 205 children called "poor" by physicians, 203 were caught by the grid as unsatisfactory, either because of unfavorable channel position (table 2), excessive change in channel between successive measurements, age retardation or objectionable progress. Again, of 371 subjects called "poor" or "borderline" by physicians, the grid caught 350, or 94.5 per cent. In other words, the grid may be depended on to select those subjects in the obese, fair, borderline and poor groups whom physicians themselves consider to be in need of more intensive examination than that afforded by routine check-up. Of special importance is the fact that the grid identifies those children who are "not doing so well as might be," even though they are placed at the moment, as regards their physical status, in the channels called "good."^{26a}

As a further check, the grid method has been tested on the voluminous data reported from the Materials

of the Harvard Growth Study by Dearborn and his co-workers,²⁷ on the data of several smaller series²⁸ and finally against the mean values of more than 400 reports in the literature dealing with growth and nutrition of large groups of children under various conditions.

The frequency distributions of physical status, as defined by the grid method, are almost identical for all reports thus far examined, and they compare with the distributions given in table 2 and figure 8. Differences between groups can be explained by differences in socioeconomic and racial factors. Broadly speaking, 15 to 25 per cent of boys and 30 to 35 per cent of girls are today definitely in need of medical supervision and care; the majority of these are under par, the remainder obese. The unfavorable position of girls in both obese and under par classes is a continually recurring result and merits closer investigation.

COMMENT

The grid technic of evaluating physical fitness has been designed to serve a number of different purposes and to fulfil certain long felt needs. Its chief purpose is to aid a medical examiner in rendering a more objective opinion than would otherwise be possible on the physical condition of a given subject. It is intended to be used as a record of and as a guide to individual progress throughout the entire range of adolescence from infancy well into maturity.

Simplicity of operation has been a main objective; another object has been to achieve maximum returns for a minimum of effort and time, without sacrifice in accuracy or dependability. The required steps, entries and items of analysis have been limited wholly to those considered necessary and sufficient for a grid rating of physical fitness. To facilitate actual work with the grid, a three color design (9 by 11½ inches) is now in preparation.

The amount of information which the grid recovers from a given set of observations that are ordinarily disregarded as soon as they have been made is obviously great. The results, moreover, can be obtained with no more expenditure of time or effort than that required to plot two points and to sight on a third. They constitute a quantitative rating of physical fitness which is independent of any bias traceable to the subject, to physicians or to the circumstances of examination, and they may be compared directly with the clinical estimate.

Aside from its usefulness in private practice, the grid is especially suitable whenever large groups of children must be dealt with. From the standpoint of public and school health, it appears that about 30 per cent of children are definitely in need of very careful medical attention. Yet, owing to lack of time and funds, no medical staff can possibly examine all its children at close intervals to detect those who require continued observation, examination and advice. The unfortunate result is that much trouble is not recognized until it

25. Dr. Harold J. Knapp, commissioner of health, and Dr. J. I. Hartman, supervisor of medical inspection of the Board of Education of the City of Cleveland, and members of their respective staffs made the study possible by providing what was essential, namely, simultaneous records of clinical appraisal along with the physical measurements of each child.

Zeithaml, C. E.: Data to be published.

has become unnecessarily far advanced. The present scheme provides a simple technic for screening children whose physical condition is presumably under par or whose progress and development are not satisfactory. The important practical result is that the work of medical staffs in connection with child health programs can be made more efficient. With the grid record of each child before him, the physician will be enabled to devote more effort to those children who actually require attention, instead of being burdened 70 per cent of the time with searching for possible defects among children whose progress and physical condition are in reality up to acceptable standards.

Two important side effects are assured. First, those children selected by their own grid records may be immediately placed under remedial control; second, a more accurate estimate of the extent and distribution of malnutrition in any community will be available to authorities. In all events the advantages traceable to early identification of unsatisfactory physical state and progress are self evident.

A warning note may be sounded. From one point of view the grid technic is almost too simple. Widespread interest in personal health might entice unqualified "observers" to render judgments otherwise unavailable to them. The grid, however, gives information on, and only on, the items explicitly listed in table 1. Specific pathologic events are entirely outside its field. A brain tumor, or many another disease, can appear in a subject of most excellent physical build. Consequently, it must be finally emphasized that the interpretation of the curves lies solely within the province of the physician, who can take the results of his own examination and the grid rating into joint account.

SUMMARY

1. A simple, objective method for evaluating physical fitness is based on the use of a grid devised for this purpose.

2. To establish a grid rating of physical condition, only three traditional measurements (weight, height and age) are required. When these are plotted on the grid, direct estimates of physique (body build), developmental level, nutritional grade, physical status and relative age advancement are obtained independently of one another. For successive annual or semiannual observations a record is built up which shows how satisfactory progress has been in the past and also indicates what forthcoming progress may be expected in the near and more distant future.

3. The grid consists of seven principal channels, the axes of which, taken crosswise, cover a range of physique (body build) from the obese to the extremely slender type and, channelwise, a range of development from infancy to maturity. The paths are linear during school life.

4. Healthy developmental progress continues in an established channel as though this were a preferred path; channel width accounts for accidental variation which does not exceed one-half channel per 10 units of advancement. Channelwise progress indicates development with preservation of given physique; cross channel progress is accompanied by change in physique. The latter type, sufficiently continued, culminates in a pathologic state. An upward trend greater than that of the channel slope indicates that obesity is in the making;

a downward trend less than that of the channel system suggests that "malnutrition" is not far removed.

5. The slope or gradient of the developmental curve gives a simple and direct measure of what clinicians, in assessing physical fitness, call the state of nutrition. Optimum nutrition, overnutrition and undernutrition are presumptively indicated by zero, positive and negative departures, respectively, from the channel slope.

6. Physical status is the attribute which results from the combined effects of growth, development and nutrition cumulated to the moment in question. Six ratings are tabulated to identify subjects in the obese, stocky, good, fair, borderline and poor groups.

7. Standard schedules of developmental progress (auxodromes) are given which show how far the physically advanced, regular or retarded child may be expected to have developed at a given age. Average progress is approximately one level line a month. Values much greater or less than this are unsatisfactory, even though development is proceeding strictly at the channel slope.

8. Maturation for both boys and girls may be expected at the age when their own auxodromes undergo the greatest curvature and thus at the time when deceleration of development is maximum.

9. An alternative method of estimating relative advancement or retardation is to determine a subject's developmental age. This serves the same purpose as, but avoids the disadvantages connected with, roentgenologic determinations of skeletal age.

10. New standards of basal heat production are included which enable estimates of metabolism to be made, without further correction, from the developmental level attained by a given subject.

11. The heat production scale in conjunction with developmental levels also provides a ready estimate of the daily caloric intake required in regular and special diets.

12. By actual test, grid ratings of physical fitness on 2,093 school children have been compared with physicians' estimates. Agreement reached 94 per cent for all children except those in the B_2 (fair) channel, on whom physicians find it difficult to agree among themselves. The grid, moreover, caught 94.5 per cent of the subjects called "poor" or "borderline" by the physicians. Today approximately 30 per cent of all children are in need of more than routine check-up. The screening and identification of these particular children are greatly facilitated and reliably performed by simple inspection of their grid records. But final judgment on their physical fitness rests with the physician, who can take both the grid and the clinical results into joint account.

Personal Improvement of Health.—Many persons fail to understand that the quality of health may be improved. They live without personal effort to enrich their lives. On the contrary, every intelligent person should have the desire to take charge of his life and to make himself as efficient as possible. Such advice is not directed at those who are ill. It is meant to apply especially to those who are not sick, because even the well, by better living, can attain an increased strength. No experiment in the laboratory of the school is half as fascinating as this one of personal improvement.—Williams, Jesse Feiring: *Healthful Living*, New York, Macmillan Company, 1941.

A SIMPLIFIED CITRATE-DEXTROSE BLOOD PRESERVATIVE

FRANK E. BARTON, M.D.

BOSTON

In the Oct. 14, 1939 issue of *THE JOURNAL* the Transfusion Service of the Massachusetts Memorial Hospitals, Boston, reported on "The Use of Placental Blood for Transfusion."¹ This article emphasized among other things the advantage obtained by the addition of dextrose to the preservative. We reported that the addition of dextrose retarded hemolysis from fourteen and four-tenths days to twenty-two and three-tenths days. This same paper stated that we were confident a series of blood specimens then being studied would show an even more delayed hemolysis. It is on this series of 250 blood specimens that we are now reporting.

The Rous and Turner² solution consisting of dextrose, citrate and blood, as described by Robertson,³ was efficacious in delaying hemolysis. There were two outstanding disadvantages in their technic: (1) the large amount of preservative that was required; (2) the concentration of sodium citrate in the mixture,

Advantage of sodium citrate 2.5 per cent plus 5 per cent dextrose over sodium citrate 2.5 per cent.

which was too high for safe intravenous administration. These factors necessitated the discarding of the supernatant plasma and the transfusing of the cells suspended in saline solution. DeGowin and his co-workers⁴ modified the original Rous and Turner solution, reducing the concentration of citrate so that the modified mixture could be transfused without discarding the plasma. In our original work on placental blood we used the so-called Moscow solution, adding varying amounts of dextrose in an attempt to simplify the Rous and Turner procedure. As our work on preservatives advanced we discarded the Moscow solution for 2.5 per cent sodium citrate, adding 5 per cent dextrose. The citrate-dextrose solution retarded hemolysis ten and eight-tenths days longer than the Moscow dextrose solution. With these results in mind we began a series using fresh venous blood in April 1939.

We standardized our work and equipment. One operator was responsible for collecting the blood, and

one technician was responsible for the laboratory work required in preserving the blood. A closed method of collection was adopted. The blood was stored in the same type of container (Fennell flask), and at a constant temperature of 38 C. All flasks were stoppered with air-tight rubber Stazon stoppers. Care was taken not to agitate the flasks, and the flasks were not exposed to direct sunlight, the supernatant fluid of the flasks was inspected daily and beginning hemolysis was recorded on the day when a faint pinkish tint was demonstrated. The only variable factor was the percentage of dextrose. As a control we preserved every third flask with 2.5 per cent sodium citrate. The amount of blood preserved in each case was 500 cc.

Fifty flasks of fresh venous blood were preserved by means of sodium citrate 2.5 per cent with dextrose 0.5 per cent. The average number of days to the appearance of hemolysis in this series was twenty-one and five-tenths days.

Following this series of fifty flasks of 0.5 per cent dextrose and 2.5 per cent citrate we preserved six flasks of 1 per cent dextrose with citrate, six flasks of 1.5 per cent dextrose and citrate and so on up to 2.5 per cent dextrose.

In a series of 92 bloods preserved with 2.5 per cent sodium citrate and dextrose 2.5 per cent the average number of days to the appearance of hemolysis was forty-six.

In a series of 84 bloods in which 2.5 per cent sodium citrate was used as a control the average number of days to the appearance of hemolysis was fifteen and nine-tenths.

In the beginning of our experiment we encountered immediate hemolysis on the addition of the citrate-dextrose mixture. At that time the citrate-dextrose mixture was packaged in an amber colored bottle⁵ with a soft rubber stopper. The citrate-dextrose solution was drawn through the needle and tubing of our collecting apparatus into the flask. A venipuncture was then performed, and by negative pressure the blood flowed into the flask containing the preservative. Apparently immediate hemolysis occurred when the first blood came in contact with the high concentration of dextrose. Our technic was changed, citrate was placed in the flask, 500 cc. of blood was collected and then 25 cc. of 50 per cent solution of dextrose with 25 cc. of sterile distilled water was carefully added. This simple modification of technic prevented further difficulties. The flasks were inspected daily for beginning hemolysis, and if hemolysis was observed even before the date of expiration the flask was immediately removed and forwarded to the laboratory for conversion into plasma. We have arbitrarily chosen eight days as the date of expiration for flasks preserved with sodium citrate. Likewise we have arbitrarily chosen twenty-one days as the date of expiration for flasks preserved with dextrose and citrate.

In May and June 1939 we took cultures of the flasks for contamination. Contamination was not encountered, and it is a policy now to take cultures only of the flasks that have been opened for one reason or another. Cultures are taken on all flasks of plasma.

Reactions following transfusions in which the citrate-dextrose solution preserved twenty-one days was used have been no greater than when blood preserved with citrate for eight days was used. A slight febrile reaction has been encountered in 2 per cent of all trans-

fusions, with no deaths. No difficulties have arisen from the diffusion of potassium, and the clinical response following the transfusion of blood preserved with the citrate-dextrose solution has been entirely acceptable. It is extremely simple to carry out the procedure outlined. It does not require added space for storage. We believe that this method of preservation of blood has a distinct advantage for a small bank.

SUMMARY

A technic of preserving blood by the use of a simplified citrate-dextrose solution was adopted.

Fifty flasks preserved with sodium citrate 2.5 per cent and dextrose 0.5 per cent failed to show hemolysis for twenty-one days.

Ninety-two flasks preserved with sodium citrate and dextrose 2.5 per cent failed to show hemolysis for forty-six days.

Eighty-four flasks with sodium citrate 2.5 per cent used as a control showed hemolysis in fifteen days.

Blood preserved with the citrate-dextrose solution has been used clinically with good results.

TREATMENT OF THE MENOPAUSE

ELMER L. SEVRINGHAUS, M.D.

MADISON, WIS.

Although clinicians generally are convinced of the value of estrogenic substances for the relief of the premenstrual symptoms of the climacteric period in women, there is much uncertainty about the optimal preparation. The choice must be made among three distinct estrogenic compounds and mixtures of these with other less potent substances. Unstandardized preparations of ovary may give clinical results, but the benefits are too uncertain to justify the employment of these early types of medication any longer. The choice between pure compounds such as estrone or estradiol and mixtures in which estrone is the chief ingredient depends on two factors: price and type of result. Except in rare cases the clinical result from any one of this estrogenic group has been found so similar to that of the others that the only important factor is price. But direct comparisons in cost have been impossible for the clinician, since the units employed by manufacturers have not been easily compared. Some preparations are marketed in terms of international units, others of rat units, others of "active biologic units" and "day oral units" and others of milligrams. The weight basis is obviously the best, but it cannot be applied to mixtures of more than one estrogen.¹ This interferes at once with the evaluation of the oldest standardized preparation on the market, which contains several estrogenic substances but chiefly estrone. Furthermore, the weight basis is misleading when applied to estradiol, for in animal assays this is known to be far more active than estrone or estriol. But the comparisons of biologic activity vary significantly, depending on the test which

is employed. There is no accepted ratio for comparison of the efficacy of these pure estrogenic molecules in relieving the symptoms of women.

From the point of view of the clinician it seems worth while to establish a comparison of the better known estrogens for women who are suffering from menopausal symptoms. As criteria for the effectiveness of therapy there are two indicators: subjective relief and vaginal epithelial response. The technic for the study of the vagina has been described and validated by Papanicolaou and Shorr.² They have shown that the qualitative changes in the appearance of the desquamated vaginal epithelium are proportional to the amount of estrogen acting in the body. This vaginal effect serves to demonstrate the effects of oral as well as parenteral estrogen therapy. By this method the doubts of skeptical clinicians can be satisfied, for relief of symptoms can be shown to parallel objective findings. In this study the two criteria have been used as independent end points in an attempt to "titrate" the evidences of the menopause with a series of estrogenic preparations. The chart of a typical patient will illustrate how this was carried out. The symptom relief was recorded as "excellent," "good," "fair" or "poor" at the time of an office visit and always by the author in person. Vaginal samples were obtained by the well known method, fixed at once in alcohol and ether and read by an especially trained assistant who knew nothing of the patient's report. The readings were not known until some days later. Alterations in dose were ordered according to the symptoms, and the results of microscopic studies used as a check in later study. When these results are plotted on a scale of 1 to 4 plus for the intensity of estrogen action, and the symptom relief similarly, two curves are obtained with surprising parallelism. It is this tendency to parallel variation of the objective changes and symptoms which gives reason for confidence in the comparisons to be made.

Because of the local reactions to oil injections by some patients and the superior type of control obtainable with oral therapy, as well as the greater convenience secured by avoiding injections, all the comparisons to follow were based on oral administration of estrogenic material.³ Earlier trials of estriol had been far less satisfactory than those with estrone; hence no use of estriol was undertaken.

Late in 1940 the Council on Pharmacy and Chemistry of the American Medical Association adopted the term "estrogenic substance" to refer to naturally occurring mixtures of estrogenic materials. Since more than one estrogenically active compound is present in such mixtures and since potency per milligram varies widely, it is impossible to state potency of such substances in terms other than biologic units. The application of the international unit for pure estrone to such mixtures is far from satisfactory. Attempts to improve this standardization technic are under way in 1941. This should make it possible to check satisfactorily by laboratory methods on the potency for clinical use of the

2. Papanicolaou, George, and Shorr, Ephraim: Action of Ovarian Follicular Hormone in the Menopause, as Indicated by Vaginal Smears, *Am. J. Obst. & Gynec.* 31: 806 (May) 1936.

3. For this study Schering Corporation supplied estradiol and also some modifications of this compound not yet ready for market release; Ayerst, McKenna and Harrison, estriol glucuronide; Endo Products, Inc., Lakeside Laboratories, Inc., Kremers-Urban Drug Company and E. R. Squibb & Sons supplied estrogenic substances 1, 2, 3 and 4. Special mention should also be made of the estrone supplied by the Abbott Laboratories in capsules for oral use, of the estrone in 90 per cent alcohol prepared by Eli Lilly & Co. and of supplies of stilbestrol from the Squibb and Lakeside laboratories. These special products are not yet to be placed on sale but were compared with the other commercial products mentioned.

Publication delayed because of unpreventable complications.

From the State of Wisconsin General Hospital and the Department of Medicine, University of Wisconsin Medical School.

Read before the joint meeting of the Section on Practice of Medicine and the Section on Pharmacology and Therapeutics at the Ninetieth Annual Session of the American Medical Association, St. Louis, May 19, 1939.

1. Pedersen-Bjergaard, Kaj: Comparative Studies Concerning the Strength of Oestrogenic Substances, London, Oxford University Press, 1939.

numerous brands of estrogenic substances which are appearing on the American market.

One of the results is the demonstration that there are minor variations in the results, objective as well as subjective, when a given dose is used daily by a particular woman. Therefore it would be necessary to keep each patient for several weeks on each dose of each estrogen to be certain of the exact value of that treatment. This method seemed too tedious. Results are therefore presented in terms of a series of comparisons which state that a certain dose of preparation A is better or worse than a definite dose of preparation B. The differences are slight, but they exist, without doubt. In a few cases essential equivalence of result could be read with certainty from the protocols. The comparisons as stated are in terms of the objective changes; that is, the vaginal reactions and not the patients' reports.

Table 1 presents the comparisons of four of the most widely known estrogenic preparations. Results are all calculated to the amounts of estrogenic substance, or estrone, which are compared with 600 active biologic units of estradiol. The actual doses

Comparison of objective and subjective changes in one woman from use of various estrogenic substances. Upper line represents response of vaginal epithelium from 0 (castrate type) to 4 (full estrus smear). Lower line represents subjective relief, e. g. E excellent, G good, F fair, P poor. Doses of estrogens in thousands of units orally a day, estriol glucuronide in tablets, stilbestrol in tenths of milligrams. Time elapsed seventeen months.

varied from 600 to 7,200 such units of estradiol and from 2,000 to 10,000 units of estrogenic substance. There are some variations, but the best statement in summary would be that estradiol is at least three times as potent as estrogenic substance 1, unit for unit. Just here is met the difficulty. The unit of estrogenic substance 1 is the international unit as defined by the League of Nations. The unit of estradiol is an "effective unit" or an active biologic unit as defined by the manufacturer. This unit does not bear a constant relationship to the weight of material in the tablet and depends on a clinical report from one cooperating clinic. The 600 "units" have been claimed for 0.9 mg., more recently for 0.5 mg. Since there can be no rational comparison of such units, it is possible to make this comparison clinically only on a price basis. The quotation to the retail trade as of January 1941 on estradiol containing 600 effective (or active biologic) units per tablet was 14 cents per tablet. That for estrogenic substance in 2,000 international unit capsules was 9.6 cents. The aforementioned 600 and 2,000 unit amounts are

as nearly comparable as can be determined from this method of study. It is therefore evident that the price will lead the clinician to choose estrogenic substance 1.

A further factor in making a choice would be any superior type of result due to one product. In general

TABLE 1.—Relative Potency of Estrogenic Substances

Estradiol, 600 Active Biologic Units, was more potent than		
Estrogenic Substance 1	Estrogenic Substance 2	Estrone
2,000 I. U.	5,000 I. U.	3,600 I. U.
2,000	4,800	2,500
2,000	3,000	2,000
1,666	2,500	1,200
1,200	2,000

750	2,000	
	or as potent as	
2,000		4,500
666		3,750

all these comparisons have led me to make the statement that any of the estrogens considered can give any degree of control desired, depending entirely on the dose. There have been only two exceptions to this conclusion: In one woman nausea and emesis followed the use of estrogenic substance or of stilbestrol, but results were entirely satisfactory with estradiol. In another the use of estrogenic substance was entirely unsuccessful in the control of hot flashes, whereas comparable doses of estradiol were satisfactory.

Comparisons with estrogenic substance 2 have been surprising. This material is labeled in international units and was expected to be directly comparable to estrogenic substance 1. Table 2 shows it in comparison with estradiol, and the results may be summarized as showing that estradiol is from four to eight times as effective as estrogenic substance 2. Table 2 also shows that estrogenic substance 1 is at least two and a half times as useful as 2. Further comparisons with estrone are available. The latter substance was used in weighed doses. A capsule with 1 mg. of estrone would by definition contain 10,000 international units. Direct comparisons between estrone in milligrams and estrogenic substances 1 and 2 in units cannot be drawn from the protocols. Indirect comparisons of each with the nearest equivalent doses of estradiol suggest that estrone and estrogenic substance 3 are both inferior to estrogenic substance 1 unit for unit. In this case the units are the same. This comparison can hardly be final, but it suggests that the mixture of estrogens 1 is more effective

TABLE 2.—Relative Potency of Estrogens

Estrogenic Substance 2, 1,000 I. U., was less potent than

tive in the human being than its potency in international units based on estrus production in the rat would indicate. There will remain some uncertainty about the significance of these comparisons of two brands of estrogenic substance until the exact chemical composition of each is known and the purity of estrone certified. Estrogenic substances 1 and 3 appeared directly comparable, unit for unit.

Table 3 presents a series of statements about estriol glucuronide. This material, derived from the placenta, is a mixture of estrogenically active substances. It is standardized not in international units but in day oral units, 120 to each tablet. Again it would have to be compared on a price basis. The most recent quotations on estriol glucuronide are 3.7 cents per tablet of 120 day oral units. The comparison is therefore that for 3.7 cents one can secure less help with estriol glucuronide than for 1.07 cents with estrogenic substance 1 or for 3.1 cents with estradiol. Furthermore, it will be noted that doses of 6 to 9 tablets of estriol glucuronide were required, with less benefit than was obtained from small doses of the other estrogens. Because of the large doses sometimes required, i. e. from 10,000 to 20,000 units daily in cases of severe involvement, it becomes manifestly impossible to use estriol glucuronide in the more extremely disturbed menopausal patients, as the manufacturers have stated frankly. Recent trials of 600 and 1,200 unit tablets

TABLE 3.—Relative Potency of Estriol Glucuronide

more potent than Estriol Glucuronide (120 oral units) 6 or 9 tablets		

indicated a wider usefulness for these more potent tablets.

One of the surprising results has been the demonstration that estrone can be applied on the skin in alcohol solution and that there is prompt and efficient absorption of the estrogen, while the alcohol evaporates quickly. I have repeatedly demonstrated that this method will control climacteric symptoms satisfactorily. In 1 case in which daily intramuscular administration of 10,000 unit doses of estrogenic substance 1 had long been given it was possible to transfer to the same dose of 10,000 units of estrone in alcohol on the skin. Later, as is the case with oral therapy, the dose was gradually reduced with continued control of symptoms. In another case daily administration of 4,000 units in oil given intramuscularly was replaced by 4,000 units on the skin. The first patient had been castrated by irradiation several years previously because of neurofibroma in the femur, which also led to a high amputation of the thigh. The daily use of large doses of an estrogen had been necessary to control extraordinarily severe pain and nervousness associated with a neuroma in the stump. The application of from 5,000 to 10,000 units of estrogen daily to the skin of the abdomen for more than twenty-eight months has led to no sign of

any dermal change. Occurring in a woman with a known history of tumors, this is rather reassuring. The possibilities of surface application of estrogen are encouraging because of ease of application, ease with which the dose can be measured and greater efficiency per unit than in any other route of administration save that by oil injection. Eli Lilly & Co., which furnished the material, is not prepared to release this solution. Brief experience with estradiol in alcohol demonstrates it to be absorbed through the skin likewise.

Recently the trials of stilbestrol have been compared with the results from estrone and estradiol. The preliminary results suggest that stilbestrol must be approximately as potent orally as estrone when compared on a weight basis. The oral use of estradiol is inefficient, as a consequence of which the doses of stilbestrol are much smaller in milligrams than those of estradiol. The reports of nausea from stilbestrol can be confirmed for a few patients, but in all save 2 it has been easy to secure relief from symptoms of the climacteric with doses small enough not to cause gastric distress. There have been no other unpleasant effects from stilbestrol. Since this compound is a synthetic substance, without known biologic effects other than its estrogenic action, it probably ought not to be introduced into general clinical use until more extensive toxicologic studies have been reported. It is not at present available for sale in the United States.

In conclusion there is one further observation of clinical significance. The foregoing comparisons were all made on the basis of the objective data from vaginal epithelium. If the subjective relief curves had been used, the advantage of estrogenic substances and even estriol glucuronide would have been slightly greater. In other words, there were numerous occasions when patients were better satisfied than the vaginal cell response would suggest. The differences between the two criteria were not great, but they occurred frequently enough to call attention to their direction.

It is evident that estrogenic therapy by the oral route is dependable. The choice of preparation to be used is largely a matter of price, save that estriol glucuronide is not practical in large doses. Comparisons of units are still difficult unless one is dealing with identical chemical compounds. The mixed estrogens known now as estrogenic substances and estriol glucuronide appear to have an advantage per unit over the pure estrone, which is the chief constituent of the mixture. Estradiol is not better clinically and suffers from the price comparison. If this can be adjusted, the clinician may use whichever preparation he prefers and secure equally good control of climacteric symptoms.

Four Years Short of New Zealand.—In the sixteenth century the average length of life in western Europe is said to have been nineteen years; in the seventeenth century, twenty-five years; in the eighteenth century, thirty-two years. In the nineteenth century in this country life averaged approximately forty years; at the beginning of the present century this average had increased to forty-nine years, and by the end of the first quarter of the twentieth century to approximately fifty-seven years for boys and to approximately sixty years for girls. By 1938 this increase in life expectancy at birth in the United States had extended to sixty-two years for males and females combined. Splendid as this is, it is still four years short of the present life expectancy in New Zealand.—Diehl, Harold S.: *Healthful Living*, New York, McGraw-Hill Book Company, Inc., 1941.

ACCIDENTAL TRANSMISSION OF MALARIA

THROUGH ADMINISTRATION OF STORED BLOOD

ERNEST F. GORDON, M.D.

YONKERS, N. Y.

In 1938 Wright¹ published an excellent review in which he collected 24 case reports of accidental transmission of malaria through the administration of blood. To this he added 6 cases of his own. Since 1938, 5 other cases covering this subject have been described by McCulloch,² Gardner and Dexter,³ Zussman and Silver,⁴ Nabarro and Edward⁵ and Chamorro and Molezzun.⁶ In all these cases the blood used for the recipient was freshly drawn from the donor and given shortly afterward either intravenously or intramuscularly.

The case about to be related is probably the first ever to be reported in which malaria was acquired through the transfusion of stored blood obtained from a blood bank. As careful a search as it was possible for me to make failed to uncover any like report.

REPORT OF CASE

M. C., a 7 year old white boy of Irish-American parentage, was admitted to the pediatric service of the Yonkers Professional Hospital on March 6, 1940 because of an unexplained fever of three months' duration.

The patient's past history revealed nothing of importance up to Oct. 25, 1939. On this date he was admitted to a hospital because of burns involving the left side of the head and the left upper and lower extremities. He remained in the hospital nine weeks, during which time the burns responded to treatment except for a small area behind the left ear which became secondarily infected. He had a high continuous fever for the first four weeks, and three blood cultures taken at various times in this period were negative except for the initial one. This yielded a staphylococcus producing a small amount of yellow pigment and a slight zone of hemolysis. The impression then was that the culture had become contaminated.

The hematologic examination on admission was normal, but in the course of nineteen days moderate secondary anemia developed. Because the boy was seemingly losing ground he was given blood transfusions on November 11, 19 and 22 of 300 cc., 300 cc. and 250 cc. respectively. The blood was obtained from the blood bank maintained by the hospital. Two different donors were used. Unfortunately it could not be determined how many times each person's blood was given.

During the last five weeks that the patient was hospitalized his progress was one of slow but steady improvement, and he continued to be afebrile and asymptomatic.

Following his discharge on December 23 he was seen in the surgical outpatient department on several occasions. On Jan. 29, 1940 the mother told the attending physician that her son was having recurrent attacks of fever, and because there was no apparent explanation for it he was referred to the pediatric clinic. The appointment was not kept.

The story from that time until his present admission, as obtained from the mother, was that on December 25, two days after discharge, the boy began to have a high temperature. Bouts of fever were noted to have made their appearance once a week up to a month prior to admission, after which they recurred twice a week. On one occasion the temperature was taken and found to be 106 F. Frequently there was a chill

just before the fever reached its peak, and sometimes vomiting occurred at the height of the fever. Jaundice was never observed, and at no time did the patient complain of abdominal discomfort. Urologic symptoms were also absent.

When the patient was admitted to the pediatric ward his rectal temperature was 99 F., pulse rate 110 and respiratory rate 25. He was very thin, poorly developed and malnourished but did not appear to be very sick. The positive manifestations were limited to the left mastoid region, where the skin had been burned and had not entirely healed. There was no edema of the tissues and no pain. Some crusting of the burn was evident. The left leg was rather badly scarred but completely healed. The spleen was not palpable at this time, though the tip of it could be felt at times later on.

Urinalysis disclosed a faint trace of albumin and rare hyaline and granular casts. The red cell count was 3,120,000 per cubic millimeter, with hemoglobin 56 per cent (Sahli); the white cells numbered 6,500 per cubic millimeter with 65 per cent polymorphonuclear leukocytes. The stained smear showed evidences of moderately severe secondary anemia. The Wassermann reaction was negative.

The patient's chart illustrates his progress in the hospital.

At first osteomyelitis of the mastoid process was considered to be the cause of the fever, but roentgenograms failed to reveal any bony changes. Two blood cultures taken during the second and third peaks did not yield any organisms. Agglutination tests for typhoid, paratyphoid and undulant fevers all gave negative results.

After my observing the patient closely for ten days, during which time he had three febrile episodes regularly spaced by intervals of two days, the cause of these rises was suspected. Clinically, the patient did not seem to be much affected by them. He appeared rather listless, but he did not vomit and had no chills. It occurred to me that the boy might have malaria. Accordingly, on the morning of March 16, a few hours before the anticipated rise, thick drop preparations of his blood were made. The smears were stained by the Giemsa method and examined by Dr. H. K. Russell, director of the hospital laboratory. Quartan malaria schizonts were found in fair numbers by him.

Treatment with atabrine, 0.1 Gm. twice a day, was begun on March 18 and continued for five days. On March 19 the patient was given a transfusion of 250 cc. of citrated blood, his father acting as donor. A few hours later, the temperature rose suddenly to 107 F. and the patient had a severe shaking chill lasting an hour. The next day the boy was moderately jaundiced and the spleen was palpable. He voided a bloody urine which gave a positive benzidine reaction. Microscopically, no formed elements were found; the lack of them thus confirmed the diagnosis that the patient had suffered from an acute attack of paroxysmal hemoglobinuria. At the end of ten days the jaundice had cleared up and the urine showed no blood. A recheck on the recipient's and donor's blood was made, and they were again found compatible.

On March 26 the temperature went to 101.4 F., and it was felt that another course of atabrine was indicated. This was begun the next day and continued, as before, for five days. Soon afterward the temperature dropped to normal and remained so to the time of discharge. Smears of the patient's blood were taken almost daily after the diagnosis was made, and March 22 was the last date that any parasites were found.

The boy's appetite during the last three weeks of his stay became enormous. He gained in weight and improved in every other respect. The diet was reinforced with 9 grains (0.6 Gm.) of ferrous sulfate and 500 international units of thiamine hydrochloride daily. The red cell count on discharge was 3,530,000 and the hemoglobin 77 per cent (Sahli).

As soon as the diagnosis of quartan malaria was made the problem of discovering the source of the infection immediately presented itself. Since the boy was born in Yonkers and had never resided outside the city, and because malaria is almost unheard of in this area,⁷ it seemed logical to suspect the blood transfusions which the patient received at the other hospital.

7. Only 1 case was reported to the Yonkers Health Department during the past ten years, and 26 cases, during the same period from Westchester County.

1939.
6. Chamorro, T. A., and Molezzun, R.: *Semana méd.* 2: 908 (Oct. 20) 1938.

Through the cooperation of that hospital it was possible to establish contact with the two donors and obtain samples of their blood for study. One was a man aged 29 who was born and had lived all his life in Yonkers. He gave no history of any infection. His blood was eleven days old when it had been given to the patient.

The other donor was a man aged 50 who was born in Italy and had lived there until 1905, when he migrated to the United States. He could not recall any illness there or any in his family that resembled a malarial infection. His family were farmers, apparently of good, healthy stock. He entered in the United States Army during the World War and was in France fourteen months. While there he contracted an ill defined febrile illness lasting two or three days but not severe enough to call it to the attention of the army physician. In 1921 he was operated on at Mount Sinai Hospital for "pus on the kidney" secondary to osteomyelitis of the distal phalanx of the left thumb, which had been draining for more than a year. He made an uneventful recovery from the operation, and since then his health has been excellent. When his blood was used for the patient it had been stored for two days.

Thick drop blood smears were made of both men's blood. They were first given a hypodermic injection of 5 minims (0.31 cc.) of a 1:1,000 solution of epinephrine, and fifteen minutes later the blood was drawn. Dr. Russell found the

instances of syphilis, tuberculosis, smallpox and sepsis innocently acquired through the administration of some one's blood, but it must be admitted that the total number of infections is infinitesimally small when compared to the total number of transfusions. The fact that accidents have occurred and probably will recur in the future should constantly remind physicians of such hazards and stimulate them to bend their efforts to minimize these incidents. Another factor of utmost importance is that technical difficulties at present make these unfortunate occurrences almost unavoidable. Neither the hospital nor the physician can be blamed for this circumstance.

The preservation of blood for transfusion is a recent development in medical therapeutics. Many hospitals all over the world now have blood banks as part of their services. The manner in which the blood is collected and preserved is familiar to all, and numerous articles on the subject have been written.⁹ Suffice it to state that every known precaution is observed to prevent such an accident as the one here described. Before a prospective donor is used he is asked many questions,

blood from the first (i. e., the American-born) donor normal; after a considerable length of time he discovered a few malarial parasites like those seen in the patient's blood in the blood of the donor who was born in Italy.

COMMENT

When it was found that the blood of one human being could be injected into the circulation of another, the physician's armamentarium in the fight against disease was tremendously augmented. Today the indications for the application of transfusion are legion. Its use is no longer restricted to those persons who are desperately ill, but, as far as the pediatrician is concerned, transfusion is frequently utilized prophylactically to prevent the development of serious complications.

No one can estimate the number of transfusions given all over the world every year, but one can imagine that it is great. The total count must be staggering when it is recalled that the first transfusion was given as far back as 1667 by Denys.⁸

Potential dangers of a blood transfusion are recognized. Besides malaria, one has read or heard of

including questions about his place of birth, occupation, residence in the tropics and illnesses such as malaria and syphilis.

The donor used for the patient under consideration was subjected to such scrutiny and apparently was found to be suitable. The only criticism that might be made about this man's blood being taken is that he was born in a country where malaria is known to be endemic and therefore should have been rejected on that basis alone, despite the negative history and blood analysis.

Certain procedures in the preservation of blood might be adopted to aid in minimizing the opportunities to spread infection from man to man. By employing only those persons who have been born in this country and have never lived in districts where malaria is prevalent, physicians would be taking a long step forward. Secondly, an examination of a thick drop preparation would appear to be essential. Finally, to be absolutely sure that malaria would not be transmitted the blood ought to be stored for at least eight days before being

used. Ackermann and Filatov¹⁰ and Antschelewitsch¹¹ have shown, by both human inoculations and in vitro experiments, that the plasmodia gradually degenerate and finally disappear from the blood the longer the blood is stored. The former investigators were unable to transmit malaria in 22 psychotic patients after known infected blood had been kept in the refrigerator for five days or longer. In his series Antschelewitsch was able to infect persons with malarial blood which had been preserved up to the eighth day. After that time every attempted transmission failed.

SUMMARY

1. A 7 year old white boy contracted quartan malaria through the administration of stored blood. The plasmodium was found also in the blood of the donor, who gave no history of malaria.

2. The incubation period was somewhere between thirty-three and forty-four days after the transfusion. Mühlens and Kirschbaum¹² and Joyeux¹³ estimated the period of incubation for the parasite to be between twelve and fifty days.

3. The procedure which is outlined would help to avoid a repetition of the kind of accident described.

4. The foregoing case is the first of its kind to be reported.

27 Ludlow Street.

CALCIFICATION OF THE SUPRA- SPINATUS TENDON

A NEW TREATMENT

G. F. DICK, M.D.; L. W. HUNT, M.D.

AND

J. L. FERRY, M.D.

CHICAGO

Calcification in the supraspinatus tendon is a relatively common cause of pain and limitation of motion of the shoulder, occurring in adults of all ages, although it is most frequently found between the ages of 30 and 45. No cases have been reported among children. This condition is often erroneously diagnosed as bursitis, periarticular arthritis, brachial neuritis, paralysis of the radial nerve or rheumatism.

Our purpose in this paper is to discuss briefly the etiology, symptoms and physical findings and to present a method of medical management which has proved successful in a number of instances.

ETIOLOGY

The cause of calcification in the supraspinatus tendon is unknown. The tendon is so situated that it is subject to frequent mild trauma by being pinched between the head of the humerus and the acromion. Most recent writers have been of the opinion that injury to the tendon is a definite factor in the production of the calcareous deposits, yet in few cases is there a history of a definite single trauma. There is little evidence to show that calcification occurs more frequently in those people whose occupation requires the

use of the arm held in slight abduction, such as piano players, typists, scrub women, painters, tailors and professional baseball players. Among them the supraspinatus tendon must receive frequent mild trauma.

That some other factor than trauma is implicated is evidenced by the fact that the deposit of calcareous material occurs only in adults; that it occasionally is encountered in first one shoulder and then the other; that in some persons the deposit undergoes absorption, while in others it persists; that although it is a common affliction, it never develops in many persons using their arms in the same way and subjected to the same influences, and that it occurs in athletic as well as among sedentary and asthenic persons and in females as well as in males.

No definite evidence of the relation of foci of infection to the appearance of calcified deposits in the supraspinatus tendon or between foci of infection and the exacerbations of pain from the deposits has been advanced. Cultures from the deposits and the surrounding tissues have been reported negative for pathogenic organisms. On the other hand, the pathologic picture is that of chronic inflammation. The calcareous material is embedded in masses of inflammatory cells, chiefly lymphocytes and plasma cells, among which may be found a few giant cells. Fibrous tissue in various stages of development and containing acutely inflamed patches usually surrounds the calcareous material. Foci of infection may be related to these deposits. A part that is subjected to mild repeated traumas or to direct violence is more susceptible to the action of toxins or other products of the growth of bacteria than one that is not. This was shown by Burrows¹ and might explain why these deposits develop and why acute exacerbations occur in some persons and not in others, although the two groups may have had the same predisposing factors. In 1 of our patients there was an increase of pain after an abscessed tooth was removed. In others, however, apparently complete recovery has occurred in spite of definite foci of infection remaining untreated. We advised removal of the foci of infection in all cases, but as the patients improved they did not care to have it done. We are interested in following these patients to see if the deposits recur or if the patients have acute exacerbations of pain.

Metabolic disturbances have been suggested as possible causative factors, but there is no clinical or laboratory evidence that such is the case. There seems to be no connection between this condition and gout.

SYMPTOMS AND PHYSICAL FINDINGS

Apparently the deposit of lime salts occurs quietly and precedes by a considerable interval the onset of clinical symptoms. The onset may be either gradual or acute. In either case most patients complain of pain in the region of the apex of the shoulder joint occasionally radiating down the anterior aspect of the arm or to the side of the neck. Movement may be little restricted in cases of chronic calcification, but when the condition is acute there is much muscular spasm and the arm may be held rigidly to the side. In cases of less acute calcification, there is usually a varying degree of limitation of abduction and external and internal rotation. Many patients complain of tenderness over the shoulder and state that they are unable to lie on the diseased part; at times even the pressure

of a coat is uncomfortable. Stiffness is not an uncommon complaint.

The contour of the shoulder joint usually shows little change, although there is occasionally slight atrophy of the muscles. In the cases of more severe calcification fulness at the apex of the shoulder may be observed together with redness, tenderness and induration. In the uncomplicated case, when the calcification of the tendon alone exists, tenderness is well limited to a point just below the acromial process. Fairly large deposits may occur in some persons without appreciable symptoms and are occasionally accidentally discovered.

On roentgen examination the calcareous deposits cast a shadow of varying density. The shadow may be thin and hazy or dense as bone. Shadows of the two extremes may exist in roentgenograms of the same patient. The deposits may be single or multiple and may be unilateral or bilateral. They vary in size from a few millimeters to several centimeters in diameter. They may escape detection when the roentgenogram is made from only one angle if the shadow of the deposit is superimposed on the shadow of the humerus or of the acromion. Especial emphasis should be placed on the proper roentgenologic technic because the failure to make a diagnosis has often resulted from failure to place the tube at a proper angle. The technic used by the roentgenologic department of the University of Chicago Clinics is as follows: The patient is supine with back to film; the arm is in neutral position with forearm across the abdomen—palm down. The tube is centered on the acromioclavicular joint; 50 to 60 kilovolts is used for a person of average weight, and the tube is at 36 inch distance. A Bucky-Potter grid and high detail screens are used.

Fever is not usually present in this condition, but during the acute stage there may be moderate leukocytosis and a slight increase in the sedimentation rate of the blood.

TREATMENT

The management of patients with calcification of the supraspinatus tendon is largely dependent on whether the condition is acute or chronic. Obviously when the calcified material is present without causing symptoms there is little need for treatment.

Until recent years the best treatment in the acute stage was considered by many, especially surgeons, to be surgical excision of the calcified material. That this procedure is questionable in the majority of patients is evidenced by the excellent results obtained by medical management.

The treatment that we have used with good results during the past few years consists of (1) relatively large doses of ammonium chloride, (2) rest of the diseased part, (3) physical therapy and (4) elimination of foci of infection.

In reviewing the literature we have found no reference to the use of ammonium chloride or other means of lowering the hydrogen ion concentration of the blood

and lymph in the treatment of the condition. On this management there is a rapid disappearance of pain in the acute stage, and, when the deposit is not too dense, the ammonium chloride appears to cause an absorption of the calcified material. It is given in doses of 1 Gm. or more four times a day. If given after meals it seldom causes gastric discomfort. If it should, enteric coated tablets are available. The purpose of the ammonium chloride is to produce mild acidosis which tends to absorb deposits and acts somewhat similarly to the process of deleading in chronic lead poisoning. We realize that occasionally the deposits will disappear spontaneously, but we believe the ammonium chloride exerts a favorable influence in the process of absorption.

Rest of the diseased part is important. Patients should be instructed to refrain, as far as possible, from performing those movements of the shoulder which their own personal experience has shown to cause pain. Each time pain is inflicted the underlying lesion is subjected to further trauma with consequent aggravation and prolongation of symptoms. Some physicians endeavor to obtain rest of the diseased part by holding the arm at a 120 degree angle on various forms of splints or plaster casts or by tying the wrist to the head of the

Fig. 1 (case 1).—Calcification in supraspinatus tendon of right shoulder: A, measuring 3 by 1 cm.; B, decrease in size one month after institution of treatment; C, almost complete disappearance six weeks after institution of treatment.

bed. Such positions are rather uncomfortable, and patients are prone to consider such treatment worse than the disease. Proper rest of the diseased part can usually be obtained during the day by a properly applied sling, and at night a 40 to 60 degree angle of abduction can be obtained by resting the arm and forearm on a pillow which is placed with one end on the mattress and the other end over the chest and the abdomen of the patient.

Physical therapy in its various forms is helpful but if used injudiciously may cause an aggravation of symptoms. Diathermy is probably the best form of physical therapy in this condition, but if it is not available or expense prohibits its use an infra-red lamp for thirty minutes two or three times a day is a good substitute. Gentle massage combats the tendency to atrophy and may aid in the relief of pain, but it should not be employed directly over the tender area.

Foci of infection are usually apical dental infections, pyorrhea alveolaris, infected tonsils, infected nasal sinuses, chronic nasopharyngitis, cervicitis or prostatitis. Careful search for these foci of infection should be made and proper treatment given.

The results obtained by the method of treatment outlined are well illustrated by the following consecutive

reports of several patients who have been treated during the past few months. The majority of these patients had been treated by the usual methods before coming to the University Clinics.

REPORT OF CASES

CASE 1.—V. W., a 44 year old housewife, came to the arthritis clinic March 5, 1940, complaining of severe pain in

Fig. 2 (case 2).—Calcification in supraspinatus tendon of right shoulder: A, measuring 2 by 0.8 cm.; B, decrease in size to 4 by 3 mm. six months later.

the right shoulder and upper arm with inability to move the arm at the shoulder for the preceding four days. She had noticed slight pain in the right shoulder at intervals for four or five months, especially after ironing. There was no history of injury, but she had done a good deal of ironing for several years. For the past four days before coming to the clinic, the pain was so severe she could not sleep and she could not lie on the right side.

Examination of the shoulder showed an area of localized tenderness just below the acromion. None of the movements at the shoulder could be performed on account of intense pain. The soft tissues over the area of tenderness were swollen, indurated and slightly reddened.

The urine was normal; the Wassermann and Kahn tests gave negative results. Examination of the blood showed hemoglobin, 84 per cent; white blood cells, 11,800, and sedimentation rate, 3 mm. per hour. Serum calcium was 8.8 mg. per hundred cubic centimeters; phosphorus, 2.9 mg. per hundred cubic centimeters; carbon dioxide, 29.7 millimols per liter; hydrogen ion concentration of serum, 7.4, and uric acid, 2.4 mg. per hundred cubic centimeters. A roentgenogram of the shoulder showed a spectacular degree of calcification in the right supraspinatus tendon, the deposit measuring 3 by 1 cm.

The arm was immobilized; the patient was given 1 Gm. of ammonium chloride four times a day and advised to have inductotherm treatments. Because of financial conditions she could not get the inductotherm treatments, and she was advised to use an infra-red lamp for thirty minutes three times daily.

She was seen again on March 12, 1940, a week after the first visit, and reported a noticeable decrease in the severity of the pain. She was able to sleep and could abduct the arm to an angle of 60 degrees.

A week later she was again seen and had had no pain in the shoulder. She was able to abduct the arm to an angle of 90 degrees.

Roentgenograms of the shoulder taken one month after treatment showed considerable absorption of the deposit.

Roentgenograms taken two months after treatment was begun showed almost complete disappearance of the deposit.

CASE 2.—The patient, a 39 year old housewife, was first seen in the arthritis clinic on Sept. 15, 1939, and complained of pain in the right shoulder at intervals for four or five years. During the past year the pain had been present daily. She had also noticed tenderness over the shoulder and an inability to raise the hand to the head. She was awakened frequently on account of the pain, especially when she turned on the right shoulder. There was no history of injury.

Examination revealed a point of tenderness just below the acromion of the right shoulder, but there was no swelling or redness. Abduction of the shoulder was limited to 110 degrees, and there was a moderate degree of limitation of internal and external rotation.

The urine was normal; Wassermann and Kahn tests gave negative results. The blood showed white cells, 10,900; hemoglobin, 83 per cent; sedimentation rate of erythrocytes, 16 mm. per hour; blood uric acid, 2.1 mg. per hundred cubic centimeters; hydrogen ion concentration of serum, 7.43; carbon dioxide serum, 28.2 millimols per liter; serum phosphorus, 3.1 mg. per hundred cubic centimeters; serum calcium, 8.9 mg. per hundred cubic centimeters, and basal metabolic rate, —13.

Dental roentgenograms showed one tooth with a large periapical lesion.

Roentgenograms of the cervical portion of the spine showed normal conditions.

Roentgenograms of the right shoulder showed a calcification in the supraspinatus tendon measuring 2 by 0.8 cm.

The patient was advised to immobilize the right arm in a sling, to use an infra-red lamp on the shoulder for thirty minutes three times a day and to take ammonium chloride, 1 Gm. four times a day. She was advised to have the tooth with the periapical lesion removed. This was done, and for a few days afterward the pain in the right shoulder increased. One month later the pain had entirely disappeared except on extreme internal rotation. Six months later when the patient was seen again she had no pain on motion of the arm or when at rest, and the motion at the shoulder was free in all directions. A roentgenogram taken at this time showed that the deposit had decreased in size from 2 by 0.8 cm. to 4 by 3 mm., and only a trace of the calcium remained.

CASE 3.—A 43 year old Jewish woman came to the arthritis clinic on Aug. 14, 1939, complaining of severe pain in the left shoulder of two weeks' duration. She had noticed her inability to comb her hair or put on her dress. She also had noticed transient pain in the right shoulder. There was no history of injury.

Examination showed a point of tenderness just below the acromion and tenderness of the muscles of the left arm and shoulder. All movements of the shoulder were limited. There was no tenderness of the right shoulder, and motion was free and unimpeded.

Fig. 3 (case 3).—Calcification in supraspinatus tendon of left shoulder: A, measuring 2 by 0.4 cm.; B, complete disappearance four months after institution of treatment.

The urine was normal; Wassermann and Kahn tests gave negative results. The blood showed hemoglobin, 85 per cent, and white blood cells, 9,900.

Roentgenograms of the shoulders were not obtained at the first visit. The patient was advised to put the arm in a sling and to use an infra-red lamp for thirty minutes twice a day and was given sodium salicylate, 0.6 Gm. four times a day. She returned two weeks later but had had little relief.

Roentgenograms at this time showed calcification of both supraspinatus tendons, more extensive on the right. The deposit

in the left supraspinatus tendon, where she had the acute symptoms, measured 2 by 0.4 cm.; that in the right, which was symptomless, measured 1 by 1 cm.

Dental roentgenograms showed no abnormalities.

There was a tonsillar tag in the right tonsillar fossa from which pus was expressed.

The patient was given 1 Gm. of ammonium chloride four times a day and inductotherm treatments twice weekly for six

Fig. 4 (case 4).—Calcification in supraspinatus tendon of left shoulder: A, measuring 10 by 5 mm.; B, no change in size of calcification three months after institution of treatment; C, decrease in size to 7 by 1 mm. Dose of ammonium chloride increased from 4 Gm. to 6 Gm. a day one month previously.

treatments. This was supplemented by the infra-red lamp at home for thirty minutes twice a day. Relief from the pain occurred rapidly. She was last seen on Jan. 15, 1940, four months after treatment was begun. She had had no pain for three months; motion at the shoulder was free, and roentgenograms of the shoulders showed complete disappearance of the calcified deposit in the left supraspinatus tendon; the deposit in the right supraspinatus tendon, which was symptomless, showed no apparent change.

CASE 4.—A housewife aged 35 came to the University clinics on Nov. 23, 1939, complaining of pain and limitation of motion of the left shoulder at intervals for five years. She experienced pain only with certain motions, notably in raising the arm above the shoulder level and in reaching backward as in putting on a coat. There was no history of injury.

Examination showed a slight atrophy of the muscles about the left shoulder. Grating was present on motion of the shoulder. Abduction and internal and external rotation were moderately limited. There was a point of localized tenderness on deep pressure just below the acromion.

The Wassermann and Kahn tests gave negative results; the urine was normal. The blood showed hemoglobin, 84 per cent; red blood cells, 4,310,000; blood uric acid, 2.5 mg. per hundred cubic centimeters, and sedimentation rate of erythrocytes, 2 mm. per hour.

A roentgenogram of the left shoulder showed a calcification of the supraspinatus tendon 10 by 5 mm. A roentgenogram of the right shoulder showed it to be normal.

The patient was advised to use heat and massage on the shoulder and to immobilize the arm in a sling. She was started on ammonium chloride, 1 Gm. four times a day, on Dec. 6, 1939. On December 27 she stated that she had had no pain except on extreme motion.

On Jan. 24, 1940, she had no pain at rest or motion of the shoulder. Abduction was slightly limited, but internal and external rotation could be performed with ease.

On March 20, 1940, three months after institution of treatment, all movements at the shoulder were free and painless.

Roentgenograms of the shoulder on March 20, 1940, showed no apparent change in the appearance of the calcification.

On May 13, 1940, the dose of ammonium chloride was increased from 4 Gm. to 6 Gm. a day. Roentgenograms of the shoulder taken one month later showed a decrease in size of the calcification from 10 by 5 mm. to 7 by 1 mm.

CASE 5.—The wife of a physician, aged 45, was admitted to Billings Hospital on Dec. 11, 1939, complaining of severe pain in the right shoulder. She had noted slight pain in the right shoulder for six months prior to the present acute exacerbation. This mild discomfort had persisted until two weeks before admission, when it suddenly became intense and unremitting and kept her awake at night. She had been unable to move her arm from her side because of the extreme pain on slight motion. There was no history of injury.

Examination showed tenderness about the right shoulder, especially just below the acromial process. No swelling or redness was present. No motion at the shoulder could be performed on account of the extreme pain.

The Wassermann and Kahn tests gave negative results; the urine was normal; the blood showed white blood cells, 9,800; hemoglobin, 84 per cent; red blood cells, 4,650,000; blood uric acid, 0.7 mg. per hundred cubic centimeters; cholesterol, 222 mg. per hundred cubic centimeters, and serum calcium, 10 mg. per hundred cubic centimeters.

A roentgenogram of the right shoulder showed a large calcification in the right supraspinatus tendon, measuring 2.5 by 1 cm.

Dental roentgenograms showed numerous pulpless teeth with incomplete root canal therapy, one of which had an apical granuloma.

The patient was placed on a ketogenic diet and given syrup of ammonium mandelate, 10 cc. four times a day, and ammonium chloride, 1 Gm. four times a day. This was continued from Dec. 13, 1939, to Dec. 30, 1939, at which time the dose of the drugs was reduced by one half and the regular diet resumed.

Blood carbon dioxide was 17.1 millimols per liter December 15; 18.1 millimols per liter on December 16, and 20.0 millimols per liter on December 20. The hydrogen ion concentration of the serum on the same days was 7.39, 7.33 and 7.36.

On this regimen the urine showed acetone, a trace to 1 plus.

Fig. 5 (case 5).—Calcification in supraspinatus tendon of right shoulder: A, measuring 2.5 by 1 cm.; B, complete disappearance four months after institution of treatment.

The patient was given daily inductotherm treatments during this period.

She obtained rapid relief from the pain. On December 15 the pain was gone at rest and on December 18 motion was only slightly limited by the pain. She had slight disability for about three weeks more.

A roentgenogram taken on April 9, four months after the onset of pain, showed complete disappearance of the deposit. There was no limitation or pain on motion.

SPONTANEOUS LUXATION OF
THE EYEBALLREPORT OF AN INSTANCE IN A BRACHY-
CEPHALIC PATIENT

JAMES GWYNNE FOWLER, M.D.

BUFFALO

There is little to be found in ordinary textbooks on ophthalmology on the subject of spontaneous luxation of the eyeball. Some confusion has resulted because of the use of the synonymous terms "dislocation" and

Fig. 1.—Idiopathic dislocation of the eyeball (after Greig).

"luxation." The word "avulsion," while in no sense a synonym of these two words, when applied to the eyeball does describe a condition which may result from the same type of injury that can cause luxation. Berens¹ mentioned luxation as being due to injury. Fuchs² and others mentioned instances of luxation of the eye which occurs

traumatically in certain barbarous tribes in which gouging of the eyes in fights and brawls is practiced. A cow horn injury has been known to luxate a human eyeball, the horn acting as a lever and the orbital margin as a fulcrum. One old report (DeWecker, cited by Parsons³) was of a pugilist who snatched his eye off and threw it to the floor after his opponent had luxated it by a blow. Kimball⁴ described the case of a white man aged 30 with dementia praecox. The patient had attended a university for two years. He began the process by pushing his index finger into the orbit beside his left eye. Six months later he was able to extrude the eye and lay it alongside his nose. The eye had complete optic atrophy.

While the luxations in the cases just mentioned were not spontaneous, they illustrate how injury may produce luxation without causing avulsion. Ball⁵ and Wood⁶ described luxation and dislocation, and the latter repeated Barck's classification of displacement of the eyeball:

1. Luxation refers to protrusion of the eye between the eyelids, with spastic closure of lids behind the eye. It occurs spontaneously in the presence of exophthalmos. Most cases are due to shallow orbits.
2. Dislocation refers to displacement of the eye into the nasal sinuses or nasal cavity and is due to trauma.
3. Avulsion refers to partial or complete severance of extraocular eye muscles and the optic nerve, or both, from the body.

From the wards of the Children's Hospital.
Dr. Ralph De Graff prepared the photographs and conducted the roentgen examination.

Parsons³ mentioned the same classification, quoting Birch-Hirschfeld, and described luxation as being due to parturition, injury or accident, although he went on to say that it may occur spontaneously or be brought about at will by some persons with lax fascia.

It is my purpose here to discuss forward displacement of the eyeball (luxation) which occurs spontaneously. A pursuit of the literature on this subject has revealed a number of unique clinical experiences. Graefe and Saemisch⁷ described spontaneous luxation as occurring in exophthalmic goiter when exophthalmos is extreme. Tucker⁸ reported 2 instances in adults: 1 was due to exophthalmic goiter, and both eyes of the patient luxated by gentle pressure on the lower lids; the other was due to cerebral syphilis, probably gumma. The associated exophthalmos improved under treatment in each case. Oertel⁹ reported the case of a Negro woman aged 25 whose eye luxated when one of his students was retracting her lids with his fingers. The eyeball had come out on several occasions by itself, especially when she stooped over. Vision was 20/20 in each eye. Both eyes were prominent but there were no signs of goiter. Two months later she died and a small tumor of the cerebellum was found at autopsy. Oertel cited Galloway,¹⁰ who described a luxation which occurred as he was removing a foreign body from the cornea and retracting the lids with his fingers, and cited also a case of Levin's¹¹—that of an obese man aged 53 with bilateral exophthalmos and eyes which luxated spontaneously yet with no other evidence of exophthalmic goiter. Others in this patient's family

Fig. 2.—Appearance of patient with spontaneous luxation of eyeball.

had exophthalmos. Mertens¹² was examining a Negro man aged 38, and as he retracted the lids with his

fingers either eye would pop out of its orbit. Vision was 20/20 in each eye, and the fundi were normal, with no history of spontaneous luxation.

Another group of cases, which seems related to the group just mentioned yet presents in itself probably a

Fig. 3.—Prominence of eyes and alternating divergence are apparent.

distinct entity, is composed of instances in which the eye can be voluntarily luxated. Lyle and McGavie¹³ reported a case of a Negro man who had made his living by exhibiting his ability to luxate his right eye. He was unable to luxate his left eye. Autopsy, following death from pneumonia, revealed in the left orbit only normal eye muscles, but in the right there were a bifurcated superior oblique muscle and two inferior oblique muscles. The orbit was 44 mm. deep. The authors concluded that the protractor action of the four oblique muscles in one orbit enabled him to pull his eye forward between his lids. Almeida¹⁴ reported the cases of two Negroes with spontaneous luxation of the eyes. One of them had a goiter. Almeida expressed the belief that spontaneous proptosis occurred exclusively in the Negro race and that shallow orbits and relaxed ligaments were necessary adjuncts. He gave Willemer¹⁵ credit for describing the first case of spontaneous luxation and also mentioned Pereira Gomes'¹⁶ case of a Negro girl. DePontal (cited by Ball⁵) saw a young man who could luxate his eye by blowing his nose violently. Smith¹⁷ described the case of a Negro boy aged 11 years who could voluntarily propulse both eyes. Vision was 20/30 in each eye. He had normal fields and fundi but appeared subnormal mentally. At

first he had had to press his eyes out with his fingers but had with practice learned to do it without their help. Ferrer¹⁸ wrote of a half-breed man aged 20 who at the age of 5 or 6 years began voluntarily to displace both eyeballs. The fields were normal. Vision was 20/40 in the right eye and 20/30 in the left. The orbits were shallow. He had a high palate and was mentally defective. Ferrer expressed the belief that the patient's unusual ability to contract his protractor muscles made him able to luxate his eyes.

Then there is the group in which luxation occurs spontaneously because of the shallow orbits of a deformed skull. Power¹⁹ in 1893 reported the case of a child with both eyes luxated. He wired the lids together to prevent luxation. Greig's²⁰ patient was an 11 month old emaciated girl (fig. 1) whose prominent eyes would bulge outward and extrude when she cried. Her cranial sutures were very prominent, but Greig stated that the orbits were not shallow. He suggested abnormal Müller's muscles as the cause of the luxation. Donaldson's²¹ patient was a 2½ year old boy who had had prominent eyes since birth. His head was deformed and dysostosis was present. One eye had been luxated eleven times, but the tendency became less as the child grew older. Fletcher,²² in reporting a series of cases of oxycephaly, mentioned Hutchinson's patient, a girl aged 12 years, with oxycephaly whose one eye was "dislocated" on one occasion. Franceschetti's²³ patient with "dysostose cranio-faciale héréditaire" had luxation of the eyeballs.

The following case of luxation of the eyeball due to brachycephaly is, I believe, the first of its kind recorded

REPORT OF CASE

In February 1940 I was called to the dispensary of the Children's Hospital to see a 2½ year old girl with an "extruded" eye (fig. 2). She had never walked. She had a cold and a fever. While she was sitting on the floor she looked up and her right eye "popped out." Whether she was crying at the time or coughing could not be determined. During her subsequent stay in the hospital she cried, coughed and sneezed a great deal. When I first saw her the eye had been luxated one-half hour. Pushing it back seemed impossible, because the lids were spastically closed behind it. A hook was slipped under the upper tarsus and as the upper lid was brought forward the eye readily fell back into the socket. The lids were taped shut for a few days. Her cold improved, and during her ten day stay in the hospital her eye did not luxate again. Up to the present writing (June 1940) the child has remained well and no further luxations have occurred.

Physical examination revealed a deformed skull, a large open anterior fontanel, poorly formed teeth and a high arched palate. Her eyes were prominent (fig. 3), yet the lids covered them easily. The lids looked large. The pupils seemed normal. There was an alternating divergence, as seen in figure 3. The general musculature was weak. A Wassermann test was negative. The eyegrounds were normal. The pupils dilated readily with homatropine. There was no optic atrophy, no papilledema and no retinal hemorrhages. A differential blood cell count was negative.

Roentgen examination of the skull in anteroposterior and lateral views (fig. 4) showed a definite foreshortening of the skull in the anteroposterior dimension, with flattening in the occipital region. The orbital cavities were shallow. There was synostosis of the sutures and evidence of intracranial pressure, as seen by convolution atrophy in the occipital region and upward bulging of the bone and pressure atrophy in the region of the anterior fontanel. The diagnosis was brachycephaly.

Rubin²⁴ gave a complete survey of oxycephaly. It is due to premature synostosis of the bones of the skull. Various deformities due to this condition are (1) scaphocephaly—narrow skull with bulging forehead and occiput; (2) dolichocephaly—long, narrow skull; (3) brachycephaly—short, wide skull, and (4) oxycephaly—high-domed or tower skull. In cleidial dysostosis, the skull is usually of the brachycephalic type. The word "oxycephaly" is predominantly used throughout the text, the other prefixes denoting variations in shape of the skull due to the underlying premature synostosis. The commoner eye changes are listed as optic atrophy, amaurosis, exophthalmos, divergent strabismus and nystagmus. All observers cited found these defects in a large percentage of their cases. Various observers have estimated the incidence of oxycephaly to be from 1 per cent to 12.4 per cent of the population. Many criminals and persons with mental disease have oxycephaly. "Exophthalmos is due to the shallow orbits, and may be unequal. Dislocation of eyes is reported."

From the literature one must conclude that spontaneous luxation of the eyeball, though rare, has been described a number of times, and if one studies reported cases a varied etiology is at once apparent. The related terms of dislocation and avulsion properly refer to trauma. Luxation of the eye should be further qualified as:

1. Spontaneous—arising from (a) oxycephaly, brachycephaly and related conditions due to premature synostosis; (b) prominent eyes—usually in Negroes or (c) exophthalmic goiter (in which disease luxation occurs very rarely).
2. Voluntary—usually found in mentally subnormal Negroes. Probably luxation is due to protractor action

of oblique muscles. In some cases it begins as a self-induced anomaly.

3. Self induced—found in persons with mental disease. Later may become voluntary or at least very easily accomplished.
4. Traumatic—eye is luxated but not avulsed by trauma.

AND

SAUL HOLTZMAN, M.D.

WASHINGTON, D. C.

During the past few years we have had the opportunity to observe 5 instances of renal failure after transfusion. Indeed, one of us in the course of his private practice within a few months was called to see 3 patients with this condition. In none of these cases had the attending physician thought of the transfusion as a causative factor in his patient's illness. It seems probable, therefore, that it occurs more commonly than is generally realized and that frequently the diagnosis is not made. Those patients who are treated with transfusions of blood are often suffering from some severe illness which in itself may cause renal failure, so the transfusion is too often not considered the cause of the difficulty. Since the methods of grouping, cross matching and transfusing blood have been perfected, transfusion has become so common that respect for its hazards has waned. There is no branch of medical practice in which it is now not a common mode of therapy. So we think it worth while again to call the attention of the profession to one of the serious reactions that may follow transfusion.

Denys¹ described hemolytic reactions with "sooty urine" when he transfused the blood of a lamb into man in 1667. The work of Landsteiner,² Jansky³ and Moss⁴ on the isoagglutinins and the isohemolysins of human blood has made of transfusion a reasonably safe mode of therapy. But, in spite of careful blood grouping and cross matching, serious sequelae still develop. Bordley⁵ in 1931 first brought clearly to the attention of American physicians the knowledge that renal failure sometimes followed transfusion. He said: "In not a single case is there complete and satisfying evidence to prove that the blood of the donor was compatible with that of the recipient." We agree with this statement. In general, his opinion has been confirmed, though there are several instances on record in which reexamination seemed to indicate an in vitro compatibility.⁶

In these hemolytic reactions the exact mechanism of the development of the renal lesions is not entirely clear. Ponfík⁷ by the injection of heterogenous blood into dogs produced a clinical and pathologic condition similar to that found in man. Baker and Dodds⁸ and DeGowin and his co-workers⁹ have shown in animal experiments that if the urine is acid when hemoglobin is injected the acid hematin pigment will precipitate in the renal tubules, producing a blockage with a clinical picture of uremia similar to that seen in man. If the urine is alkaline, the hemoglobin will be passed in the urine without renal injury. Aside from blockage of the renal tubules a concomitant or independent tubular necrosis may occur. This is often serious enough to produce uremia and death. This has been demonstrated by DeGowin¹⁰ both experimentally and in man.

At autopsy, the changes are predominantly in the kidneys, which are usually described as being enlarged and congested. Microscopically, the picture varies and the anatomic basis for the renal insufficiency is not always evident. The most constant observation is considerable interstitial edema, frequently associated with leukocytic infiltration. The most striking renal change, though it is not always of great degree or even present, is the occurrence of masses of brown pigment filling the tubules. This pigment is considered to be acid hematin derived from hemoglobin of the hemolyzed blood, which is said to impair renal function by obstructing the tubules. In addition, the tubular epithelial cells contain droplets of this pigment and show advanced degenerative changes often comparable to that seen in poisoning from mercury. The glomeruli are, as a rule, intact. The liver may show small areas of central focal necrosis. A general deposition of hemosiderin is frequent.

Bordley⁵ originally advanced four hypotheses as to the mechanism of this renal failure. In view of subsequent work only two of these seem possible: first, the theory of tubular blockage by hemoglobin pigment and, second, the assumption that some portion of the free hemoglobin is nephrotoxic and capable of producing tubular degeneration, interstitial edema and leukocytic infiltration in the kidneys.

The most important and striking reaction to a blood transfusion is that due to an incompatibility of the bloods. Severe reactions have resulted from the transfusion of as small a quantity as 10 cc. of incompatible blood. In some cases, death has been almost instantaneous, probably from massive agglutination with embolism. Usually the reaction is more prolonged, and the symptoms fall into an immediate and a delayed group. The immediate reaction occurs during the transfusion. The patient may experience a severe chill, a rise in temperature, pains over the entire body but more particularly in the lumbar region, great restlessness and anxiety, a sensation of fullness in the head, precordial oppression, dyspnea, vomiting, flushing of the face and involuntary defecation. Collapse sometimes follows. In patients surviving the immediate reaction or in those who escape this a delayed reaction may ensue a few

hours to a few days later. This is often ushered in by a chill and fever. Oliguria develops in all cases and frequently there is complete anuria. Hemoglobinuria and jaundice may appear. After a varying length of time, usually from three to twelve days, the patient either succumbs to uremia or recovers after diuresis.

During the last few years we have seen 5 instances of renal failure following transfusion. Through the cooperation of our colleagues, we have collected other cases occurring in Washington hospitals. We are reporting 13 instances of this entity.

REPORT OF CASES

CASE 1.—E. M., a white woman aged 63, admitted to Garfield Hospital Jan. 12, 1936 with a history of pernicious anemia since 1931, had been treated successfully with liver extract until she discontinued treatment a year before admission. The patient was well nourished, with pallor of the skin and mucous membranes and an icteric tinge to the scleras, papillary atrophy of the tongue, enlargement of the liver and spleen and hyper-

Fig. 1 (case 1).—Section of kidney showing the tubules filled with granular pigment. The tubular epithelium is swollen and in places desquamated. Interstitial edema is present. Reduced from a photomicrograph with a magnification of 377 diameters.

tension, the blood pressure being 145 systolic and 75 diastolic. The hemoglobin content was 47 per cent. The erythrocyte count was 2,000,000 and the leukocyte count 7,000. The urine showed a trace of albumin. On January 18 she was given 500 cc. of citrated blood by transfusion. No typing was done, but cross matching was reported as satisfactory. A mild thermal reaction followed. On January 22 another transfusion of 500 cc. was given without typing but with satisfactory cross matching. Shortly after the transfusion there was a severe chill, marked clonus of the entire body, nausea and vomiting, a thready pulse and involuntary defecation. Four hours later she voided 360 cc. of dark, blood-tinged urine. The temperature rose to 105 F. and drowsiness developed. The following morning there were deep jaundice, irrationality, nausea and vomiting, a blood pressure of 80 systolic and 40 diastolic and rales at the bases of both lungs. One hundred and fifty cc. of dark brown urine was voided on this day. The leukocyte count was 30,800, with 75 per cent polymorphonuclears. The urine showed albumin (4 plus) and gave a 4 plus reaction to benzidine, with only a few white cells in the sediment. The second day after the transfusion generalized edema appeared, and in spite of an intake of 2,000 cc. of fluid only 90 cc. of urine was voided. Four days after the transfusion there were complete anuria, stupor and hiccup. The nonprotein nitrogen level of the blood

was 160 mg. per hundred cubic centimeters, and the combining power of carbon dioxide was 33 per cent by volume. Death occurred five days after the transfusion. No typing or rematching was done.

At autopsy both lungs showed congestion and edema. The liver was slightly enlarged and dark brown. The spleen was

Fig. 2 (case 2).—Numerous tubules are filled with finely granular pigment and hyalinized material. There is interstitial edema and leukocytic infiltration. Reduced from a photomicrograph with a magnification of 87 diameters.

three times normal size, soft and of a mahogany color. The kidneys were enlarged, dark, deeply congested and edematous. The microscopic examination showed considerable interstitial edema with some infiltration of leukocytes. The tubules were greatly dilated and clogged with masses of dark pigment. The tubular epithelium was swollen and showed some desquamation, and deposits of granular pigment were present in the cells of the tubules. There was a definite increase of connective tissue in the glomerular tufts (fig. 1). Sections of the liver showed areas of necrosis about the central veins of the lobules.

CASE 2.—L. B., a white woman aged 28, admitted to Galinger Hospital March 20, 1940 with bleeding from a threatened abortion, was given 80 grains (5.2 Gm.) of sulfanilamide because of suspected infection. Abortion occurred two days later, but the placenta was retained. Since the bleeding continued the placenta was removed manually and the uterus packed two days after the abortion. The patient was given 250 cc. of citrated blood from the blood bank. The blood of both recipient and donor was of type IV (Moss), and cross matching was satisfactory. On the patient's reacting from anesthesia, a chill occurred and there was a moderate rise of temperature. Nine hours after the transfusion 150 cc. of dark brown urine containing albumin (3 plus), dark brown casts and an occasional red cell and leukocyte was voided. The following day there was jaundice, frequent nausea and vomiting, and only 350 cc. of brown urine was passed, despite an intake of 3,700 cc. of fluid. Two days after the transfusion the nonprotein nitrogen level was 100 mg. and the creatinine 3 mg. per hundred cubic centimeters. The leukocyte count was 19,100, with 89 per cent polymorphonuclears. This day a large amount of alkali was given by mouth, and sodium bicarbonate was given intravenously, but only 75 cc. of brown urine was passed. During the following six days stupor, generalized edema, restlessness and retinal hemorrhages were noted. The blood pressure was 130 systolic and 70 diastolic. The daily total output of urine was 250, 385, 220, 250 and 190 cc., despite a daily intake of 3,000 cc. of fluid. Death occurred eight days after the transfusion. The recheck showed both the donor's and the recipient's blood to be type IV (Moss), and the cross matching was satis-

factory. The autopsy revealed considerable congestion of both lungs and enlargement and congestion of the liver. Sections of the liver showed congestion only. The kidneys were swollen, enlarged and congested. The sections showed the glomeruli intact. The tubules were dilated, and there was flattening of the lining epithelium. Many of the tubules were filled with red cells in a hyalinized blood clot. All contained masses of finely granular pigment. There was considerable interstitial edema with some leukocytic infiltration (figs. 2 and 3).

CASE 3.—M. R., a white woman aged 50, admitted to the Emergency Hospital on Nov. 17, 1934 in a moderate degree of shock due to fractures of the femur and ribs, with considerable loss of blood, was given 500 cc. of citrated blood by transfusion. The patient and donor both had type IV (Moss) blood, and cross matching was reported satisfactory. There was no immediate reaction, but for three days after the transfusion there were nausea and vomiting without urinary suppression or any other abnormality aside from a trace of albumin and a few hyaline casts. Twelve days later, while under anesthesia for application of a cast, the patient was given 500 cc. of satisfactorily matched citrated blood. A chill occurred in thirty-five minutes, and the temperature rose to 103 F. Nausea, vomiting, jaundice and oliguria developed, associated with hemoglobinuria and hematuria. The urinary output per day was 150, 30, 13, 50, 70, 115 and 170 cc. On the fourth day the nonprotein nitrogen level was 56 mg. and chlorides 410 mg. per hundred cubic centimeters. By the seventh day the nonprotein nitrogen level was 75 mg. per hundred cubic centimeters. At this time Dr. R. E. Stetson, who had been called from New York, gave a direct transfusion of 500 cc. of blood after spending two hours in painstakingly grouping, regrouping and repeatedly cross matching the blood of the donor and the recipient with no results suggestive of any incompatibility. There was no immediate reaction, but thirty-five minutes later a chill and fever occurred, followed by jaundice, hemoglobinuria, hematuria, oliguria, nausea and vomiting. In spite of large amounts of physiologic solution of sodium chloride and hypertonic dextrose given parenterally, the total urinary output was on successive days 100, 225, 310, 414, 545, 715, 1,045, 1,140,

Fig. 3 (case 2).—Interstitial edema is present and the tubules are filled with finely granular pigment. Reduced from a photomicrograph with a magnification of 183 diameters.

1,295, 1,350, 1,455 and 1,240 cc. The abnormalities gradually decreased in the urine, but its specific gravity was fixed. On the fourth day after transfusion the leukocyte count was 30,000, with 98 per cent polymorphonuclears. The nonprotein nitrogen level was 90, the creatinine 3.6, chlorides 510 mg. and serum bilirubin 2.5 mg. per hundred cubic centimeters. The carbon dioxide combining power was 31 per cent by volume. General-

ized edema developed, and death with pulmonary edema occurred on the thirteenth day after the last transfusion.

The autopsy was limited to the abdomen. The only abnormalities were congestion of the liver, spleen and kidneys. Sections of the kidney showed areas of leukocytic infiltration throughout. The tubules were widely separated by delicate, pale, edematous, fibrous tissue. The tubules were dilated and the epithelium was granular and flattened. Their lumens only occasionally contained granular or fibrinous material or a globule of homogeneous hyalinized substance. The glomeruli were congested and for the most part well preserved. The blood vessels were decidedly sclerotic and in some cases completely obliterated by fibrous tissue (fig. 4).

Dr. Stetson¹¹ rechecked the blood of the donor and recipient carefully by both the macroscopic method and the Landsteiner technic. No agglutination or hemolysis occurred. However, when tube preparations of the donor's cells and the recipient's serum were incubated at 37.5 C. overnight there was marked agglutination and hemolysis. It was later ascertained that agglutination occurred regularly in thirty-five minutes when the preparations were incubated at 37.5 C. This is the exact time at which reactions occurred after the transfusions. The tests were repeated, various type IV cells being used with the patient's serum, and in the great majority this incompatibility was demonstrated.

CASE 4.—E. L. P., a white woman aged 28, had some edema of the ankles without hypertension or albuminuria during the last two months of her pregnancy. Her physical examination was negative. The urine showed no abnormality. The blood pressure was 130 systolic and 80 diastolic. On July 19, 1939 at Garfield Hospital she was delivered by high forceps of a large child after a hard labor. The placenta was retained. The following day, because of a temperature of 103 F., the placenta was removed manually under anesthesia. The third day after delivery the temperature was still high and sulfanilamide with sodium bicarbonate was given for two days and then stopped because of cyanosis. Three days after delivery the blood showed a hemoglobin content of 9.5 Gm., or 57 per cent, erythrocytes 3,000,000 and leukocytes 15,950. On this day the patient was given a transfusion of 500 cc. of citrated blood without a reaction. The blood of both donor and recipient were reported as type IV (Moss), and cross matching showed no agglutination. Three hours after the transfusion 90 cc. of "dark urine like argyrol" was obtained on catheterization, and thereafter all urine voided was dark brown. On examination the urine showed a large amount of albumin, and the sediment consisted of masses of almost black, coarse and finely granular amorphous material. There were no erythrocytes but clumps of red material. Many pus cells were present and the occult blood test gave a strongly positive reaction. Two subsequent transfusions were given without a reaction and without altering the patient's condition. On the day after the transfusion jaundice, stupor, nausea and vomiting developed. Hemoglobinuria persisted.

When the patient was first seen by one of us, three days after the transfusion, the following observations were made: The patient was obese and was critically ill; there were Kussmaul breathing, an odor of acetone on the breath, a blood pressure of 190 systolic and 100 diastolic, stupor, generalized edema, extreme pallor, moderate icterus, cyanosis, nitrogen retention (a nonprotein nitrogen level of 100 mg. per hundred cubic centimeters), acidosis (combining power of carbon dioxide 30 per cent by volume) and hemoglobinuria. The leukocyte count was 19,750. There were edema of both heads of the optic nerve, edema of the retina and a few rather large scattered hemorrhages in both eyes. The retinal arteries appeared normal. In both flanks and extending forward in the abdomen an indefinite mass was palpable which may have been the liver and spleen, but polycystic kidneys had to be considered. The patient was suffering from renal insufficiency following a transfusion, which we thought might be superimposed on polycystic disease of the kidneys.

In spite of massive quantities of physiologic solution of sodium chloride and hypertonic dextrose given intravenously only 1,140

cc. of urine was excreted from the time of the transfusion to death four days later. The nonprotein nitrogen level rose to 112 mg. per hundred cubic centimeters, the combining power of carbon dioxide fell to 24 per cent by volume, deep coma supervened and death occurred four days after the transfusion.

Rematching of the blood of the patient and of the donor was not done.

Fig. 4 (case 3).—Extreme leukocytic infiltration and interstitial edema. Reduced from a photomicrograph with a magnification of 87 diameters.

Autopsy by Dr. J. W. Lindsay gave the following information: The pericardium contained 75 cc. of straw-colored fluid. The heart was normal. Both lungs were congested and edematous. The spleen was enlarged and considerably congested. The liver was enlarged and showed extensive congestion. The right kidney weighed 425 Gm., and the pelvis was dilated. The left kidney weighed 375 Gm. Sections of the kidney showed the tubules generally dilated and containing granular or hyaline material. The tubular epithelium was compressed, and the nuclei were sometimes lost. The proximal tubules were usually dilated. The lining cells were swollen, granular and at times desquamated. Aside from the tubules containing hyaline material, there were others distended with masses of leukocytes and granular material. The glomeruli were well preserved. In some areas there was considerable interstitial edema and some hemorrhagic infiltration. There was extensive leukocytic infiltration, in places appearing like well defined small abscesses (fig. 5). Sections of the liver and spleen showed congestion only.

CASE 5.—B. R., a white woman aged 43, admitted to Garfield Hospital in shock from massive hemorrhage following a spontaneous abortion, was given a transfusion of 500 cc. of citrated blood after curettement and packing of the uterus. The blood of the donor and of the recipient was type III (Moss), and cross agglutination showed no incompatibility. During the transfusion palpitation, oppression, flushing, nausea and vomiting developed, but in spite of this the entire 500 cc. of blood was given. After the transfusion there were chilliness and a mild rise in temperature, and nausea and vomiting persisted. In spite of an adequate parenteral intake of fluids no urine was voided the next day, and on subsequent days, though not measured, the output was known to be inadequate. The urine was not examined. Jaundice was not noted. Four days later another transfusion of 500 cc. of citrated blood was given without reaction. One of us was asked to see the patient seven days after the first transfusion because of continued nausea and vomiting. The urinary output was 270 cc. that day. There were puffiness of the eyes, a blood pressure of 155 systolic and 70 diastolic, normal fundi and an otherwise unrevealing physical examination. The urine was found to contain a large

11. Stetson, R. E.: Personal communication to the authors.

amount of albumin but nothing abnormal in the sediment. The nonprotein nitrogen level was 117 mg. per hundred cubic centimeters. With increased injections of physiologic solution of sodium chloride and hypertonic dextrose the output was increased to 1,100 cc. and thereafter gradually rose, but anasarca and Kussmaul breathing, with a nonprotein nitrogen level of 100 mg. and a chloride level of 633 mg. per hundred cubic centimeters and a combining power of carbon dioxide of 26 per cent by volume were found. The leukocyte count was 23,900, with 91 per cent polymorphonuclear leukocytes. After reduction of the intake of fluid diuresis (6,000 cc.) occurred on the twelfth day after the reaction to the transfusion. Recovery was then rapid though marred by severe bilateral suppurative parotitis. On discharge the urine showed a trace of albumin, its specific gravity was fixed, the nonprotein nitrogen level and blood pressure were normal and the phenolsulfonphthalein test showed an excretion of 34 per cent in one hour. At present no evidence of impairment of renal function can be found.

The blood of donor and recipient was rechecked and found to be type III (Moss). On cross matching there was no agglutination, but at the end of twenty minutes all the donor's cells were hemolyzed by the recipient's serum.

Fig. 5 (case 4).—Dilatation of tubules with flattening of the tubular epithelium. There is interstitial edema and extreme leukocytic infiltration. Reduced from a photomicrograph with a magnification of 87 diameters.

CASE 6.—B. M., a Negress aged 35, admitted to Emergency Hospital with an obscure abdominal condition on April 25, 1939, was given transfusions on three occasions without a reaction. After an exploratory laparotomy she was given a transfusion of 500 cc. of citrated blood. The blood of the patient and the donor was type IV (Moss), and cross matching was reported as satisfactory. When 350 cc. of blood had been given a shaking chill occurred and the pulse became weak and thready. The transfusion was stopped, but the temperature rose to 106 F. No urine was passed the next day, but on the following day a small amount of red urine containing much albumin and some erythrocytes was voided. The urinary output per day was 150, 350, 900, 600, 500, 700 and 2,100 cc. There was considerable stupor, the pulse was rapid and the patient showed every evidence of being critically ill. The nonprotein nitrogen level rose to 180 mg. and the creatinine level to 7.5 mg. per hundred cubic centimeters. After injection of large quantities of hypertonic dextrose intravenously, diuresis occurred, with rapid improvement in the patient's condition. The nonprotein nitrogen level fell to 38 mg. per hundred cubic centimeters, and the patient recovered.

A recheck of the blood of donor and recipient showed it to be type IV (Moss). On cross matching, the donor's cells were

considerably hemolyzed by the recipient's serum at the end of one hour.

CASE 7.—C. D., a white woman aged 48, admitted to Garfield Hospital on Dec. 1, 1937, complained of metrorrhagia. The hemoglobin content was 56 per cent and the erythrocytes numbered 3,900,000. The urine contained a large amount of albumin. To control the metrorrhagia a supravaginal hysterectomy was performed on December 3 for a fibroid uterus. Postoperatively she was given 400 cc. of citrated blood without a reaction. The blood of the patient and of the donor were both type IV (Moss), and the cross matching was satisfactory. On December 5 a second transfusion of citrated blood was given from a donor whose blood matched the patient's type. After receiving 100 cc. she complained of pain in the head, abdomen and precordium. The rate of flow was diminished, but the pains became so intense that the transfusion was stopped at 250 cc. A rigor followed. Six hours later she voided 100 cc. of urine, the specimen being discarded without comment by the nurse. The total output of urine for December 6 was a single specimen of 15 cc. obtained by catheter. It was black and contained a large amount of albumin and numerous dark brown casts. Subsequent specimens showed only large amounts of albumin and at times large numbers of white blood cells. After the transfusion there was persistent nausea and vomiting. Large intravenous injections of dextrose and saline solution were given daily. Additional transfusions of citrated blood were given from donors whose bloods were properly typed and matched, without reactions, on December 7, 9, 10, 11 and 12. After the reaction to the transfusion the urinary output per day was 15, 150, 300, 90, 0, 150, 532, 500, 960 and 1,536 cc. On the ninth day after the hemolytic reaction, the nonprotein nitrogen level was 190 mg. per hundred cubic centimeters, the combining power of carbon dioxide 22 per cent by volume and the leukocyte count 12,500 with 76 per cent polymorphonuclears. Coma and anasarca were extreme. Thereafter tremendous quantities of urine were passed, and with the diuresis the edema vanished and the patient improved. By the thirty-fifth day the nonprotein nitrogen level had fallen to 45 mg. per hundred cubic centimeters. The systolic blood pressure never exceeded 162, the diastolic, 100 mm. of mercury.

Convalescence was complicated by a severe infection of the abdominal wound, profuse purulent vaginal drainage, pyelitis and large vaginal hemorrhages necessitating a further transfusion of 500 cc. of citrated blood. To this transfusion there was a reaction with urticaria and chilly sensations. The patient was discharged on Jan. 28, 1938, fifty-four days after the causative transfusion. On subsequent observations, the last on April 1, 1940, the patient has been found to be in excellent condition; the examinations of urine gave negative results; the blood pressure readings were within normal range and the phenolsulfonphthalein excretion was normal. The blood of the donor and patient was rechecked. The blood of the donor was found to be type II and that of the recipient type IV (Moss). On cross matching there was agglutination and hemolysis of the donor's cells.

CASE 8.—J. E., a white woman aged 61, was admitted to Garfield Hospital on June 7, 1938 for splenectomy for Banti's disease. There was extreme anemia. The urine showed a large amount of albumin and a few granular casts. The nonprotein nitrogen level was 37 mg. per hundred cubic centimeters. The blood pressure was 150 systolic and 84 diastolic. Repeated transfusions were given. On July 12 before reacting from anesthesia, she was given a transfusion of 250 cc. of citrated blood. The patient's blood was type IV (Moss), as was the donor's. Cross matching showed no incompatibility. During the transfusion the patient became restless and tossed about in bed. The daily intake for six days after the transfusion was 2,610, 3,540, 3,330, 3,600, 4,350 and 2,230 cc. with a daily output of 525, 585, 630, 930, 1,620 and 2,535. The character of the urine was not remarked on. Listlessness developed three days after the transfusion, and gradually the patient became stuporous, disoriented and incontinent. The leukocyte count was 22,800, with 81 per cent polymorphonuclears. Two weeks later, though the urinary output had become satisfactory, the nonprotein nitrogen level rose to 112 and soon afterward

to 150 mg. per hundred cubic centimeters. There it remained for several days. Gradually with symptomatic improvement the nitrogen level returned to normal. No recheck of the blood grouping or cross matching was done.

CASE 9.—A. L. C., a white woman aged 35, admitted to Emergency Hospital on Sept. 1, 1938, complained of chronic glomerular nephritis and purpura. During a previous admission to the hospital she had had three transfusions with a pronounced reaction consisting of chill, fever and persistent nausea with vomiting following one of them. The blood pressure was 170 systolic and 98 diastolic. The urine was of low, fixed specific gravity and contained albumin. The nonprotein nitrogen level was 76 mg. per hundred cubic centimeters. On September 16, though her condition was improved and she was ready for discharge, she was given a transfusion of 500 cc. of citrated blood from the same donor whose blood had produced a reaction during the previous admission. The patient's blood was type IV (Moss), as was the donor's. Cross matching showed no incompatibility. Fifteen minutes after completion of the transfusion lumbar and precordial pain, rapid pulse, a chill, fever, nausea

sinuses were found and roentgenograms showed extensive osteomyelitis. Multiple drainage was instituted and he received during a three months period ten transfusions of stored blood without a reaction. On Aug. 13, 1938 he was given 500 cc. of warmed stored blood which was 8 days old and partially hemolyzed. Thirty minutes after the transfusion he had a severe, shaking chill and gradually became drowsy and irrational. That evening he voided a small amount of mahogany-colored urine containing albumin, hemoglobin and some erythrocytes. A smaller amount of urine of the same character was passed the day after the transfusion, but no further urine was voided. Jaundice was noted, and the van den Bergh test gave an immediate direct reaction. On the third day after the transfusion stupor was more pronounced and the nonprotein nitrogen level was 85 mg. per hundred cubic centimeters. The patient died on August 16, three days after the transfusion, in spite of large amounts of fluids and alkalis administered parenterally. Permission for autopsy was not obtained. A reexamination of the donor's and of the patient's blood showed no incompatibility.

TABLE 1.—Summary of Clinical Data

Case	Age and Sex	Diagnosis	Blood Type (Moss)		Amount of Blood, Cc., and Method	Immediate Reaction	Leuko-cytes	Poly-mor-phonu-clears, per Cent	Non-Protein Nitro-gen	Carbon Dioxide Com-bining Power	Outcome and Day of Death or Climax	Reecheck	Proved Incom-patible	Proved Com-patible	Comment

Cross matching was satisfactory in all cases.

and vomiting developed. The following morning the patient passed 160 cc. of red urine which contained a large amount of albumin and many erythrocytes and gave a strongly positive reaction to benizidine. The blood pressure fell to 104 systolic and 70 diastolic, and depletion was marked. Jaundice was not noted. Stupor with oliguria was accompanied by a rise of the nonprotein nitrogen level to 112 mg. and of creatinine to 5 mg. per hundred cubic centimeters. There was no leukocytosis. Large amounts of 10 per cent dextrose in physiologic solution of sodium chloride were administered by vein. After a week of pronounced oliguria, diuresis occurred and the patient's condition returned to what it had been before transfusion. The nonprotein nitrogen had returned to its previous level when she was discharged from the hospital. Fourteen months later she was readmitted to the hospital with anasarca and uremia, dying soon after admission. Autopsy showed small, contracted kidneys with the usual microscopic appearance of chronic glomerular nephritis. There was no recheck of the blood grouping or cross matching.

CASE 10.—M. F., a white man aged 19, admitted to Gallinger Hospital on April 6, 1939, had fractures of the left forearm and left femur. These extremities were in casts. The patient was ill with fever. On removal of the casts multiple draining

Case 10 is thought to represent a death due to the use of hemolyzed stored blood which was probably warmed to an excessive temperature.

CASE 11.—I. F., a white woman aged 25, admitted to Garfield Hospital July 13, 1932, had a hemorrhage from a spontaneous abortion. She was acutely ill, with a temperature of 103 F. The hemoglobin content of the blood was 29 per cent. The erythrocyte count was 2,200,000 and the leukocyte count 10,300. The urine showed a slight amount of albumin. After manual removal of the retained placenta her condition was improved. A transfusion of 500 cc. of citrated blood was given. Cross matching was satisfactory, but no blood typing was done. The transfusion was followed by a thermal reaction. On July 22 a second transfusion of 500 cc. of citrated blood was given. There was no typing, but cross matching was satisfactory. One half hour later there were a severe chill, involuntary defecation and a temperature of 105.6 F., and vomiting began. The following morning there was definite jaundice and 500 cc. of urine was voided, the character not being recorded. On the second day, the urinary output was 390 cc. and the fluid intake 2,000 cc. On the third day after the transfusion 450 cc. of dark brown urine was voided. This contained a large amount

of albumin and numerous leukocytes. The leukocyte count was 18,200. During the next six days the patient's condition grew gradually worse with increasing stupor. The daily output of urine totaled 90, 210, 200, 200 and 60 cc. Death occurred on July 31, nine days after the second transfusion. No blood typing or recheck of the cross matching was done.

CASE 12.—C. D., a white woman aged 32, entered Sibley Hospital June 1, 1939 with profuse bleeding from a spontaneous abortion. On this day she received 500 cc. of citrated blood by transfusion. The donor's blood was type IV (Moss) and the patient's type II (Moss). Cross matching was reported as satisfactory. Shortly after the transfusion a severe chill occurred, and the temperature rose to 103.2 F. During the chill there was involuntary defecation and vomiting, and the patient complained of severe pains throughout the body. The following day jaundice was noted, and 550 cc. of urine was voided. No note was made of the character of the urine. The second day after the transfusion the patient's condition was much worse. There were drowsiness and inability to take food. Rales developed at the bases of both lungs. Only 60 cc. of dark brown urine was voided. This contained albumin (4 plus), many granular casts and a few leukocytes and erythrocytes. The leukocyte count was 74,000, with 95 per cent polymorphonuclears. During the subsequent three days the daily urinary output was 100, 210 and 240 cc., despite a daily intake of 3,000 cc. of fluid. On the fourth and fifth days she received transfusions of 300 cc. of citrated blood from type II

(Moss) donors without reaction. Death occurred on June 7, six days after the initial transfusion. Permission for autopsy was not obtained. No recheck of the typing or cross matching was done.

CASE 13.—F. S., a white woman aged 35, admitted to Providence Hospital Jan. 6, 1940, had Banti's disease. There were anemia, splenomegaly and leukopenia. On the day she was admitted a transfusion of 500 cc. of citrated blood was given. The blood of both donor and recipient was type II (Moss), and cross matching was reported satisfactory. After 150 cc. of blood had been given she experienced sharp pain in the upper part of the left side of the abdomen and in the left lumbar region. There was a sense of suffocation, and nausea developed. In spite of the severe reaction the operator gave the rest of the 500 cc. of blood. One-half hour later there were pronounced restlessness, weeping, general malaise and a temperature of 101 F. The following day jaundice was noted and vomiting was pronounced. No urine was voided. The second day after the transfusion 90 cc. of dark urine was voided after an intake of 2,000 cc. of fluid. The urine contained albumin (4 plus), occasional granular casts, many erythrocytes and leukocytes. The leukocyte count was 10,300 with 90 per cent granulocytes. The daily output of urine for the next five days was 60, 45, 180, 180 and 520 cc., with a daily intake of approximately 2,000 cc. of fluid. Vomiting continued. Rales appeared at the bases of the lungs. The blood pressure rose to 180 systolic and 70 diastolic, and on the sixth day after the transfusion the nonprotein nitrogen level of the blood was 109 mg. and the creatinine level 6 mg. per hundred cubic centimeters. On the eighth day after the transfusion, gradual diuresis began, associated with definite improvement in the patient's condition. The daily urinary output was 825, 930, 1,150, 1,890, 2,400 and

2,600 cc. The nonprotein nitrogen level fell to 33 mg. per hundred cubic centimeters nineteen days after the transfusion. Five weeks after the transfusion a successful splenectomy was performed before which four transfusions of 500 cc. of citrated blood were given without a reaction. There was no recheck of the blood typing or cross matching.

COMMENT

The accompanying tables summarize the observations on our 13 cases. The blood of 7 of the patients was type IV (Moss). In 2 of the cases no blood grouping was done, but in all 13 cross agglutination tests between the recipient and the donor were reported as satisfactory prior to the transfusion. Reexaminations of the blood grouping and cross matching were obtained in 6 patients after the reaction to the transfusion. We are personally satisfied as to the thoroughness of the recheck in 4 of these cases. The blood of donor and recipient in these were all incompatible. In the 2 other cases there was no evidence of incompatibility. One of these patients was given warmed, hemolyzed blood which had remained in the bank for eight days. Baker¹² has reported an instance of renal insufficiency probably due to overheating blood with resultant hemolysis. DeGowin's¹³ recent work seems to indicate that the warming of blood prior to administration adds a hazard to the procedure. He finds that cold blood can be given with complete safety. In case 2, 24 hour old stored blood was used, but careful cross matching and retyping by two different laboratories failed to furnish any evidence of incompatibility. We did not have an opportunity personally to recheck this blood.

Moss⁴ in 1910 said: "Isoagglutination may occur independently of isohemolysis but isohemolysis is probably always preceded or accompanied by isoagglutination." Cases 5 and 6 of our series indicate that this generalization is not tenable, as in both these cases hemolysis of the donor's cells occurred without concomitant agglutination. Bernheim,¹⁴ Kolmer¹⁵ and DeGowin and Baldrige¹⁶ have found, too, that hemolysis of the donor's cells by the recipient's serum is not necessarily preceded or accompanied by agglutination. It seems apparent, therefore, that our present routine examinations for compatibility between the donor's cells and the recipient's serum is inadequate and therefore does not always prevent the use of incompatible blood. We feel that the usual cross matching preparations should be incubated for one hour at 37.5 C. and that tube preparations by the Landsteiner technic² should be employed.

It has been clearly shown by Strumia and others¹⁷ that citrated plasma is as valuable as whole blood in combating secondary shock. It is, therefore, unnecessary to give emergency transfusions if a plasma bank is maintained. The use of plasma will avoid the necessity of hurried typing by persons of little experience and thereby prevent serious or fatal reactions.

Experimental work with animals¹⁸ indicates that renal failure does not occur when hemoglobin is trans-

18. Baker and Dodds.⁸ DeGowin, Osterhagen and Andersch.⁹

fused if the urine of the recipient animal is alkaline. It therefore seems desirable to give alkalis to all patients prior to transfusion.

Immediate reactions occurred in 6 of our cases, but in only 2 of these was the operator wise enough to stop the transfusion before the intended amount of blood had been given. One patient received 350 cc. and the other 250 cc. of blood. Both recovered, as did the 1 other patient who received less than 350 cc. of blood. This seems to indicate that there is a correlation between the outcome and the amount of blood given.

We have been impressed by the frequency and persistence of nausea and vomiting. In 2 patients these symptoms occurred as an immediate reaction. Involuntary defecation occurred in 3 of the 6 patients experiencing an immediate reaction. Hemoglobinuria developed in 11 patients, jaundice in 8, stupor in 11, edema in 6 and oliguria in all 13 patients. Retinal hemorrhages were found in 2 instances though there is no record of examination of the fundus in the majority of the cases. Of the 7 patients on whom observations of blood pressure were recorded after the reaction, 4 had hypertension. Azotemia and acidosis existed in all the cases studied. No correlation could be found between these and the ultimate outcome.

The frequency of leukocytosis has not been previously emphasized. It was present in all 11 cases in which the leukocytes were counted after the reaction. The leukocyte counts ranged from 10,000 to 74,000 per cubic millimeter, with an average of 25,000. In the great majority of instances there was a significant increase in the polymorphonuclear leukocytes with a shift to the left in the Schilling index. The striking leukocytosis is not unlike that seen in poisoning with mercury bichloride, in which there is also extreme damage to the renal tubules. We find no prognostic value in the level of the leukocyte count.

There were 7 deaths among the 13 patients, a mortality of 54 per cent. The duration of life after onset of the condition in the fatal cases ranged from three to thirteen days. In the nonfatal group diuresis began in from three to nine days after the transfusion.

Permission for autopsy was obtained in 4 of the 7 fatal cases. In all instances the kidneys were large, swollen and congested. The sections all showed interstitial edema, leukocytic infiltration, dilatation of the tubules and degenerative changes of the tubular epithelium. In 2 cases the tubules were filled with enormous quantities of reddish brown, granular pigment, probably acid hematin. The microscopic picture in those 2 cases strikingly resembles the change produced experimentally in dogs by DeGowin.¹⁰ In the other two there was some deposition of granular and hyalinized material in some of the tubules. In only 1 instance was there necrosis of the liver cells about the central veins. The liver showed considerable congestion in the remaining 3 cases. The pathologic examinations confirm the observations of Bordley, DeGowin and others but add nothing to our knowledge of the pathogenesis of the lesions.

CONCLUSIONS

Among 13 patients with renal insufficiency following transfusion 6 recovered and 7 died.

An immediate or delayed reaction occurred as a result of the transfusion and was followed by nausea, vomiting, hemoglobinuria, jaundice, oliguria, stupor and uremia.

Leukocytosis was present in all cases in which the leukocytes were counted.

Of 6 cases in which the blood grouping and cross matching were rechecked the blood in 4 was shown to be definitely incompatible. Of the remaining 2, in 1 warmed, hemolyzed, stored blood 8 days old was given.

Isohemolysis unaccompanied by isoagglutination was found in 2 cases. This accounted for the error in cross matching and caused the hemolytic reaction.

More careful cross matching of the blood of donor and recipient by the use of tube preparations incubated at 37.5 C. for one hour will prevent some of the errors and save lives.

Citrated plasma should probably replace whole blood in the treatment of secondary shock and hemorrhage.

Alkalis should be administered to all patients prior to transfusion.

The pathologic changes in the kidneys in 4 fatal cases consisted of interstitial edema, leukocytic infiltration, degeneration and necrosis of the tubular epithelium and the deposition in the renal tubules of granular pigment derived from hemoglobin. One case showed central, focal necrosis of the liver cells.

Clinical Notes, Suggestions and New Instruments

TRAUMATIC IMPLANTATION OF EPITHELIAL CYST IN A PHALANX

SAMUEL C. YACHNIN, M.D., PASSAIC, N. J.
AND
FREDERICK SUMMERILL, M.D., MIDDLETOWN, N. Y.

The occurrence of an epithelial cyst enclosed within the bony structure of a phalanx of a finger is a rare condition, for such a case has not been reported in the medical literature of this country. Neither can it be found mentioned in the recent textbooks of general and orthopedic surgery, of tumors and also of bone diseases. So to present a case in which it was found should be of interest. An explanation of its origin embraces two possibilities: first, that of congenital malformation with inclusion of aberrant epithelial cells, comparable to the formation of a simple dermoid cyst; second, that of traumatic implantation.

CASES REPORTED

Five cases have been found recorded in the European medical literature; this presentation makes a sixth case, the first in America.

The first recorded was one by Sonntag¹ in 1923: A young female injured the left hand in a machine, crushing the terminal phalanx and the distal part of the middle phalanx, which necessitated an amputation at the distal end of the middle phalanx. Twenty-four years later, after several minor injuries, there developed a swelling in the end of the stump, which was thought to be, clinically and by roentgen examination, a sarcoma. Histologically, however, it proved to be an epithelial cyst, supposedly of traumatic origin.

Burrows' case,² reported in 1926, was that of a man aged 47. When only 11 years old he ran a piece of wire deeply into the left thumb, but he did not know whether the wire went into the bone or not. In 1925, thirty-five years after the injury, he noticed that the end of this thumb was swollen. Then six months later a piece of metal fell on his thumb, which became tender and painful. On examination the thumb

2. Burrows, H.: Implantation Dermoid of Terminal Phalanx of Thumb. Brit. J. Surg. 13: 761-762 (April) 1926 (illustrated).

was swollen, reddened, tender and hot to the touch. Roentgen examination showed the terminal phalanx occupied almost completely by a ramifying cyst. At the operation a lateral incision was made, and immediately under the skin there was found a mass of white material resembling hydrous wool fat, which was pure white. This mass almost completely surrounded the phalanx and was not enclosed by a cyst wall. The terminal phalanx was amputated. Examination of the specimen showed that the bone was occupied by a single ramifying cyst with a white glistening lining. The wall was formed by a dense, almost acellular, fibrous tissue lined by stratified epithelium, which showed a prickle cell layer and stratum granulosum, and no papillae. The tissues showed no evidence of inflammation. The diagnosis was an implantation dermoid cyst which had been ruptured by a direct injury, thus becoming diffused.

Friedländer's case,³ reported in 1930, was that of a boy aged 13 years who had injured his left index finger one year previously on the spokes of a bicycle wheel. Several months later the finger began to swell, but there was little pain. Roentgen examination revealed a transparent cyst occupying two thirds of the distal phalanx with a very thin covering of unbroken cortical bone. Amputation was performed at the distal joint. The specimen showed a smooth cyst with a clear lining and contents of a yellowish flaked material. The inner lining of the cyst was that of a keratinized epidermis which lacked continuity in one place where there was intermingling granulation tissue, giant cells and some squamous epithelial cells.

Hammann's cases,⁴ reported in 1930, was that of a man aged 31 who had injured his right hand sixteen years before. The right index finger had been struck with a hammer. The skin was lacerated and the nail bed was injured. At that time the nail was removed and the wound healed without infection. Later the nail regrew. One year previously, the finger began to swell and hurt whenever it was struck. The roentgenogram showed the following: In the anteroposterior

Fig. 1.—Epithelial cyst within the terminal phalanx: A, anteroposterior view; B, lateral view.

view of the terminal phalanx there appeared a small cystic homogeneous transparent mass destroying the bone on the radial side. On the ulnar side there was normal bone from 2 to 3 mm. in thickness. In the lateral view the cyst occupied

the bone completely under the nail bed, while on the volar surface there was a 3 mm. thickness of normal bone. At operation a lateral incision was made, the cyst dissected out, the bone curetted and the wound closed. The specimen was that of a small white round tumor distinctly encapsulated and forming a cyst lined with epithelium and having its contents partly encrusted with calcium. About one fourth of the epi-

Fig. 2.—Section of epithelial cyst from phalanx showing stratified layers and dense keratinized contents.

thelial lining was thickened and showed a typical stratified structure.

Behrens⁵ in 1931 reported the examination of a specimen sent to him by Valentin. This had been removed from the terminal phalanx of the right fifth finger of a man. In 1918 he had had a slight injury to the finger by a shell splinter. In 1923 he had again injured it, this time splitting the nail bed. In 1929 it became painful and swollen, and the terminal phalanx was amputated. On examination the specimen showed an epithelial cyst in the phalanx underneath the nail bed with a granuloma protruding from the bone underneath the nail.

REPORT OF CASE

History.—A woman aged 39, seen in January 1940, had two years previously injured the terminal phalanx of her right fourth finger by catching it in an orange juice mixer. There was a laceration, and the nail was almost completely avulsed. She was treated at that time in the dispensary. The nail

Summary of Five Cases in Literature

Name	Previous Injury, Finger Years Affected	Phalanx Affected	Pain	Swelling	Cyst	Cortex Broken
Sonntag.....	24 4th	Middle	+	+	+	..
Burrows.....	36 1st	Distal	..	+	+	+
Friedländer.....	1 2d	Distal	+	+	+	+
Hammann.....	16 2d	Distal	+	+	+	+
Behrens.....	13 5th	Distal	+	+

was removed and the finger was dressed. There was no complication by infection. The finger healed completely and the nail regenerated. She noticed a slight swelling of the end of the finger for several months. For the past three weeks there had been moderate pain, especially when the finger was struck.

Examination and Treatment.—Examination revealed diffuse swelling of the soft tissue at the terminal phalanx of the right fourth finger. Deep pressure was painful but superficial pressure on the soft tissues caused no pain. There was no redness and no local heat. Motion was normal. A roentgenogram (fig. 1), taken January 8, revealed the following: In the anteroposterior view there was a circular area of destruction of the cortex of the terminal phalanx of the right fourth finger, well localized and transparent. The lateral view showed that the destructive process had penetrated the periosteum on the radial side of the phalanx and that there was some swelling

3. Friedländer, C.: Tumors, Dermoid: Traumatic Epithelial Cyst in Terminal Phalanx of Forefinger; Case, *Zentralbl. f. Chir.* 57: 209-212 (Jan. 25) 1930.

4. Hammann: Tumors, Dermoid: Traumatic Epithelial Cysts of Phalanges of Hand, *Deutsche Ztschr. f. Chir.* 223: 308-317, 1930.

5. Behrens, A.: Traumatic Epithelial (Dermoid) Cysts: Three Cases, *Virchows Arch. f. path. Anat.* 280: 145-151, 1931.

of the soft tissues. At operation, January 11, under ethylene anesthesia, an incision was made on the lateral surface of the terminal phalanx curving over the tip. The incision was carried down to the bone, which was easily entered with a fine chisel. When a fine curet was inserted into the cavity of the bone a small white mass popped out. There was no pus present. A culture was taken of material from the wound and the cavity in the bone was curetted gently and thoroughly. A small petrolatum pack was inserted into the bone cavity and the wound was closed. Five days later the petrolatum drain was removed, and the wound healed subsequently without any discharge. The culture taken from the finger showed no growth.

Pathologic Report.—The specimen consisted of a small mass of soft tissue from the distal phalanx of the fourth finger of the right hand. It measured 0.5 cm. in diameter, and the external surface gave the appearance of distinct encapsulation.

Microscopic examination (fig. 2) showed a thin wall formed by stratified squamous epithelium surrounding a nest of keratin debris, in the formation of which there was no parakeratosis. The stratum granulosum and rete mucosum were thick. The basal layer did not accompany these except in one place, where only a minute fragment was attached.

Postoperative Course.—The end of the finger remained slightly enlarged but was not tender. The patient was discharged, to return to the outpatient department. Roentgen examination at the time of discharge was the same as the first except that it demonstrated a fracture line through the external wall of the phalanx which was the point of entry of the curet at the operation.

SECOND ADMISSION

In June, five months later, the patient returned complaining that there had been gradually increasing tenderness of the finger but no increase in swelling. Roentgen examination (fig. 3) revealed that the fracture line showed no evidence of callus formation, and the general appearance of the lesion was similar to that found originally. Accordingly it was decided to excise the distal half of the phalanx. Under gas-ether anesthesia a U-shaped incision was made over the tip of the finger, and the distal half of the phalanx was excised. The pathologic specimen presented a piece of osseous tissue measuring 9 by 7

the vascular net of bone marrow, and around the circumference of the cystic opening there was a mild degree of osteitis.

The wound healed without any trouble. The swelling of the finger gradually decreased. Roentgen examination (fig. 4) at the time of the discharge two months later showed an amputation of the distal half of the phalanx and no evidence of pathologic changes in the remaining portion of the bone.

Fig. 4.—Amputation of the distal half of the phalanx: A, anteroposterior view; B, lateral view.

COMMENT

Every case, including the one reported here, presented a history of trauma, and it was either a penetrating one or a crushing one, damaging the nail bed. In 2 cases subsequent injuries caused rupture of the bone tumor and encroachment by it into the soft tissues.

These cysts, although within the bone, were like the implantation cysts that have been found in the soft tissues of the palmar surfaces of the fingers and hand, especially in tailors and seamstresses, as noted by Long.⁶ So a discussion of the means of implantation of the subcutaneous cysts would be applicable to these bone cysts. There are presented two different theories concerning their etiology: Friedländer claims that there is a congenital maldevelopment with embryonal misplacement of epithelial cells into the bone and that these are stimulated to growth by the injury. Franke⁷ agrees that the cysts are of congenital origin but holds that trauma is not essential as an exciting stimulus. On the other hand, Reverdin⁸ and Garré⁹ emphasize the presence of trauma in every case and believe that the epithelial cells are implanted at the time of the injury. This view is supported by the experimental work of Schweningen¹⁰ and Kaufmann,¹¹ who succeeded in growing epithelial cysts after transmitting epithelial tissue into the cock's comb. Wörz¹² presents a case in which an epithelial cyst developed subcutaneously from a Thiersch skin graft around an injured ulnar nerve. Pels-Leusden¹³ and Hesse¹⁴ also disagree with Franke concerning the idea of

Fig. 3.—A, anteroposterior view, and B, lateral view, showing no evidence of callus formation of the fracture line after the first excision.

by 4 mm. which had the consistency of normal bone. Lying within a cavity in this portion of bone was a piece of whitish hairlike tissue which had the consistency of a heavy rubber ball, and it measured 4 mm. in diameter. This was easily shelled out of the phalanx. Microscopically the cyst presented exactly the same picture as the previous one. The portion of the phalanx, microscopically, presented marked congestion of

congenital origin. They demonstrated by experiments that injury to the deep appendages of the skin, even without breaking the continuity of the skin, can cause epithelial cysts to form in the subcutaneous tissue. Hammann, on reviewing the literature, also emphasizes his belief in the traumatic origin. He stated that there had never been observed congenital cysts of the hand and fingers and that therefore it is a misnomer to consider them as genuine dermoids, such as those found in the region of the eye and frontal bone. Behrens, discussing his case of epithelial bone cyst, also thinks that trauma had caused a transplantation of the epithelium and reasons that a fracture must have taken place.

In the face of all the evidence, it is difficult to accept the view of congenital origin, for trauma was a constant finding. Since in all cases it was considered relatively slight, no roentgenograms were taken at the time of the original injury to show whether a fracture was present or not. In Sonntag's case the bone was definitely injured, presenting a clearcut channel for the implantation of the epithelium. It is known that the epithelial cell is a hardy one and an actively growing one. It has a remarkable ability to regenerate under conditions that would be unfavorable for growth of other more specialized tissues, as exemplified by the comparative ease of surface wound healing and grafting of skin. It is also significant that none of these tumors presented evidence of sweat and sebaceous glands or hair follicles. It is well known that surface epithelium, when it does regenerate, produces a smooth layer of cells without reformation of any specialized epidermal structure. We feel, therefore, that these tumors are caused by the implantation of epithelial cells into the bone as a result of the injury. This could take place through the smallest kind of a fracture or even by transmission along the vascular channels. It is further significant that in all cases the lack of infection is noted. If infection had taken place at the time of the original injury, the epidermal cells could not have survived. They would have been destroyed by the infectious process and extruded in the process of repair.

In all the cases the tumor grew from within the bone, destroying and thinning the cortex by pressure necrosis. In 2 cases, following a second injury, the cortex was broken through and the tumor encroached on the soft tissues of the finger. The rate of growth of the tumor appears to be quite slow. In 4 cases the injury was sustained from thirteen to fourteen years before the appearance of symptoms, while in Friedländer's case the interval was one year and in our case two years. The pathologic picture was the same in all cases. Grossly the tumors consisted of a whitish, well circumscribed, encapsulated mass of soft tissue not adherent to and easily separated from the bone. Microscopically it showed well defined stratified squamous epithelium.

It is felt that this tumor has a benign character, although it may recur locally if it is not completely removed, which happened in this case. In respect to the treatment, it is felt that amputation is not necessary, because of the benign character of the tumor, unless it has grown to such a size that it has destroyed a considerable part of the phalanx. Otherwise, simple excision should suffice for a cure. The gross appearance of the tumor is so typical that the character of the growth can be readily recognized at the time it is removed.

SUMMARY AND CONCLUSIONS

1. The occurrence of a stratified squamous epithelial cyst within a phalanx has been recognized in 6 cases.
2. Trauma was present in all the cases.
3. There was no infection complicating the effect of the trauma in any of the cases.
4. The interval between the time of injury and the onset of symptoms was relatively long.
5. The tumor evidently grew from within the bone outward.
6. The macroscopic and microscopic pictures had a marked uniformity in all the cases.
7. No recurrence has been reported following treatment by amputation.

34 Grove Street.

SPERMATIC CORD TUMORS REPORT OF A FIBROMYXOLIPOMA

M. PINSON NEAL, M.D.
Professor of Pathology, University of Missouri School of Medicine
COLUMBIA, Mo.

AND

J. FRANK JOLLEY, M.D., MEXICO, Mo.

Reports of neoplasm of the spermatic cord and tunics of the testicle are few, only 247 being on record June 10, 1939, and the current textbooks rarely more than mention it. The accompanying table, a compilation from the literature by Schulte, McDonald and Priestley,¹ shows their number and distribution as to type and malignancy. Since that study was published the *Quarterly Cumulative Index Medicus* has, up to April 1940, listed three other cases of spermatic cord tumor. The present report then brings the total of such tumors to at least 251.

Quinby² and a small number of other authors have reported lipofibromyxomas, but the summary table by Schulte and his associates¹ does not list this tumor as such, though it is referred to in the text of their article. Of the spermatic cord tumors, lipomas constitute 36.4 per cent, while those composed of fibrous tissue, the fibromas and fibrosarcomas, make up 19.8 per cent. Some authors list and describe certain growths under the term "mesodermal tumors." Rubaschow³ in 1926 listed

Tumors of the Spermatic Cord Reported in the Literature

Benign		Malignant	
Lipoma	90	Fibrosarcoma	15
Fibroma	34	Leiomyosarcoma	2
Leiomyoma	3	Rhabdomyosarcoma	2
Myoma	4	Sarcoma	39
Dermoid	14	Reticulosarcoma	1
Teratoma	1	Lymphosarcoma	1
Lymphangioma	5	Myxochondrosarcoma ..	2
Hemangioma	4	Carcinoma	3
Myxoma	1		
Myxofibroma (possibly neurogenic)	1		65
Neurofibroma	1	Unclassified	6
Cystadenoma	1	Other mesodermal tumors	17
	159	Total tumors	247
Benign tumors, approximately.....		71 per cent	
Malignant tumors, approximately.....		29 per cent	

Compiled by Schulte, McDonald and Priestley.

twenty-seven such tumors in the literature. Other authors divide them into myxolipomas, myxofibromas, myxolipofibromas, myxofibrosarcomas, myxochondrosarcomas and so on. Essentially, the tumors of the spermatic cord are derived from tissues of mesodermal origin. The exceptions are the single case of cystadenoma and the three cases of carcinoma. One may properly ask whether these did not originate from or in a teratoma or some less definite embryonal displacement. Some authors do not give to neoplasms terms that are inclusive of all elements and are content to list a given tumor under its most dominant cell type. This is an especially common procedure when the two or more cell types are derived from the same embryonic layer and are as closely related as fibrous and myxomatous elements.

From a review of the literature, and in reporting forty-one cases of tumors of the spermatic cord, epididymis and testicular tunics, Thompson⁴ concluded that approximately 70 per cent of all tumors of the spermatic cord, 40 per cent of tumors of the epididymis and 60 per cent of tumors of the testicular tunics are benign, while tumors of the testis almost without

2. Quinby, W. C.: Tumors of the Spermatic Cord and Testicular Tunics, *Tr. Am. A. Genito-Urin. Surgeons* **30**: 385-391, 1937.

3. Rubaschow, S.: Die soliden Geschwülste des Nebenhodens, *Ztschr. f. Urol.* **20**: 290-297, 1926.

4. Thompson, G. J.: Tumors of the Spermatic Cord, Epididymis and Testicular Tunics: Review of Literature and Report of Forty-One Additional Cases, *Surg., Gynec. & Obst.* **62**: 712-728 (April) 1936.

exception are highly malignant. Schulte and his associates¹ record essentially the same conclusions for spermatic cord tumors, 71 per cent being benign.

The tumors or tumor-like swellings within the scrotum call for more consideration. The differentiation of tumors of the cord, the epididymis, the testicular tunics and the testicle from developmental defects, traumatic swellings, simple inflammatory lesions (as pyocele or orchitis), tuberculosis, leprosy or syphilis (taking the form of granulomas, spermatoceles, hydroceles, hematoceles and extravaginal hematomas) and hernias is an important one from the standpoint of treatment and prognosis and for the conservation of a masculinization organ, the one source for spermatozoa and certain sex differentiating and activating hormones. A carefully taken clinical history is very important and often leads to the diagnosis. Transillumination is essential, while aspiration of contents followed by physical, cytologic and bacteriologic examinations is commonly the source of a diagnostic finding. The biologic test for gonadotropic substance is necessary for the differentiation of certain testicular tumors and tumors of the spermatic cord. Biopsy, or preferably frozen section diagnosis, is desirable in many cases, and certainly when doubt exists.

REPORT OF CASE

W. G. D., aged 85 and well preserved, has been an outdoor man all his life, active, a farmer accustomed to horseback riding; he still spends several hours weekly in the saddle. He had mumps when he was a boy but there was no associated orchitis; he has never used tobacco or alcoholic beverages in any form. The family history has no bearing on his present condition. He has had no serious illness and has not lost any weight during the last ten years.

Pursuant to fence and tree climbing habits of boyhood days and horseback riding, he recalls many painful experiences of traumatic injury or crushing of the testicles. In the late 1920's a hydrocele or "water seed" of the right side developed. Numerous aspirations resulted in the withdrawal of clear amber colored "beerlike" fluid, and eventually this ceased to form.

During the year 1929 he noticed a swelling of the left side of the scrotum which was not painful. He consulted several physicians from time to time and by aspiration some obtained small quantities of clear fluid, but there has been no permanent benefit. When seen by one of us (J. F. J.) six years ago there was a movable, nontender, painless, firm but compressible tumor, opaque to transillumination beneath the scrotal skin of the left side to which it was not adherent. It appeared to be attached to but not a part of the testicle. At one pole there was a softer area, but on aspiration no fluid was obtained. Surgical removal was advised but the patient withheld consent. Failing to obtain medical relief, the patient resorted to efforts at self aspiration or he had a farmer son introduce a large needle from time to time, and occasionally a little fluid was removed.

The growth slowly increased in size and without pain. With this development the penis became retracted to such a degree that a dimple in the skin represented its opening, and the urinary stream could not be controlled as to direction.

The patient returned to J. F. J. May 22, 1939, following amateur attempts at aspiration, with the tumor in the left side of the scrotum much increased in size, painful and now adherent over an area roughly 4 by 5 cm. to the covering skin, which was a purplish red, thickened, indurated and glistening. He stated that for several days he had had a fever, with soreness, tenderness and pain in the left side of the scrotum. Through the adherent skin slight fluctuation was elicited. The inguinal lymph nodes were not enlarged. The temperature was then 103 F. and the patient was complaining of chilliness and considerable local pain. He was hospitalized and given a pain relieving drug with local applications of alternate cold and heat. For several days there was a septic temperature and the patient appeared quite ill. On June 3 the temperature was 99 F. and under a general anesthetic the tumor mass, surrounded by the tunica vaginalis communis with the attached left testicle and the now adherent portion of inflamed scrotum, was removed in toto. The tumor was continuous upward along

the course of the spermatic cord as high as the external inguinal ring. During the preoperative period in the hospital the temperature at one time reached 104.6 F., though on several days the highest recorded was 102.

Other preoperative manifestations were moderate prostatic enlargement, varicosities of the external hemorrhoidal veins, a blood pressure of 150 systolic, 90 diastolic, and negative reactions to the Kahn and Kline tests. The blood picture twenty-four hours prior to operation was erythrocytes 4,950,000, hemoglobin 87 per cent (Sahli) and leukocytes 14,300, with 80 per cent neutrophils and 20 per cent lymphocytes. The urine contained a trace of albumin, an occasional red blood cell and numerous leukocytes, with a rare hyaline cast.

At operation the inguinal canal was not opened and it was found not to be encroached on by the tumor. The entire left scrotal content covered by the tunica vaginalis communis unopened was removed with the portion of scrotum that was adherent to the tumor. The tunica contained some clear, colorless, slightly viscid fluid. The surgical wound was closed except for a space at the lower portion of the scrotum, through which a rubber dam drain was inserted.

A fibromyxolipoma of the spermatic cord. Marginal to the uninvolved testicle is an abscess resulting from self or amateur attempts at aspiration.

Postoperative convalescence was uneventful. The patient left the hospital "on foot" June 16, still showing evidence of a mild infection of the urinary tract.

PATHOLOGIC REPORT

The specimen, M-39-156, weighed 1,425 Gm. and was composed of testicle, tunics and tumor as a mass, measuring 20 by 14 by 8 cm. The tumor, shown in the illustration, was smooth surfaced, well encapsulated and of firm but somewhat rubbery consistency. On surface by section the specimen, which was solid, was composed largely of adipose tissue. The cut surfaces showed strands of connective tissue coursing across the fat, and several small islands of softer, pale, opalescent white, moist, gelatinous structure. At one side was a well circumscribed, encapsulated, grossly normal appearing testicle, and marginal to it but within the tumor was a 4 cm. area of liquefaction necrosis and an accumulation of grayish yellow purulent exudate.

Microscopically the tumor was composed of adipose, fibrous and myxomatous tissues, each of adult appearing well differentiated cellular elements and bearing scant vascular channels. Neither mitotic figures nor areas of marked cellularity could be found. Sections of the testicle showed a slight atrophy of

the acini and a moderate hyperplasia of the interstitial cells of Leydig. The tissue surrounding the abscess was composed of a very heavy cellular wall infiltrated by endothelial leukocytes, many of which contained engulfed fat globules and droplets and some cellular debris. In the central portion of the abscess complete dissolution of normal tissue structure had occurred and there was an invasion by myriads of polymorphonuclear neutrophils.

The diagnosis was fibromyxolipoma of the spermatic cord with an area of necrosis and suppurative inflammation (abscess) and simple atrophy of the testicle with hyperplasia of interstitial cells of mild degree.

The patient when seen on June 18, 1940, appeared to be in good health, but there was urinary retention of from 40 to 50 cc.; urinalysis revealed pyuria of minimal degree, an occasional caudate epithelial cell, a few red blood cells and a trace of albumin but no casts. There was nocturia (three or four times). The prostate was moderately enlarged, compressible and not indurated or fixed, as determined by rectal examination. The blood pressure was 140 systolic, 90 diastolic, and the hemoglobin content and erythrocyte and leukocyte values were within the range of normal.

SUMMARY

A report of a fibromyxolipoma or "mesodermal tumor" of the spermatic cord is added to the twenty-seven reports of such tumors listed by Rubaschow³ in 1926. There appears to be a need for greater study of the diseases of the testicle, its tunics and the spermatic cord and a more rigid adherence to terminology.

Council on Physical Therapy

THE COUNCIL ON PHYSICAL THERAPY HAS AUTHORIZED PUBLICATION OF THE FOLLOWING ARTICLE.

HOWARD A. CARTER, Secretary.

EXPLOSION HAZARD IN ANESTHESIA

Preliminary Statement

Explosion may be caused by anything which can ignite explosive mixtures. They have been caused by hot wire cautery, cutting diathermy knife, x-ray equipment, discharge of static charges with sparking. At least one ether fire was caused by an arc when a plug connector was pulled from its socket while carrying current. The American Society of Anesthetists has assembled over two hundred cases and there are probably other causes, but the aforementioned indicate the more common causes and serve to indicate the nature of reasonable precautions.

Static charges can accumulate only on insulators or insulated conductors, and they may be avoided by the use of shoes with conductive soles and by floors which are conductive and by not insulating operating tables and other fixtures such as the anesthesia apparatus. It has been common practice to wear shoes with soles and heels of rubber or artificial substitutes, all of which insulate the wearer. The use of rubber casters, rubber tired wheels and rubber crutch tips on operating room furniture insulates it. Floors of tile are relatively poor conductors unless specially treated. Floors of linoleum, especially when waxed as usual, are not only insulators but excellent generators of electric charges by friction. Rubber tubing, face masks and breathing bags of anesthesia apparatus are a distinct hazard.

Floors of plain unpainted and unwaxed concrete are usually fairly good conductors from the point of view of this discussion and in modern iron frame buildings give adequate ground connection to leak electricity away so that there will be little likelihood of spark discharge. Most terrazzo floors are sufficiently conductive. Wood floors are entirely unsafe. Experiments indicate that a resistance of a megohm or less to ground for the total circuit will prevent sparks. Tile floors become good conductors when mopped with 4 per cent solution of calcium chloride. No soap should be used on such floors until the calcium chloride has been removed with water; otherwise an

insoluble lime soap is formed. The treatment must be given every time the floor is washed. The floor appears to dry, but it retains surface moisture. If the tile floor is washed with water it will usually be a good insulator in an hour. A tile floor requires treatment each time it is washed. Terrazzo floors may be treated similarly if found not sufficiently conductive and are especially advisable in winter in cold climates. Floors of "magnesite" appear to be highly conductive. This material is being investigated.

Ordinary leather shoes are usually sufficiently conductive if the soles are frequently dampened. When worn outdoors in rainy weather they are highly conductive. In dry weather they may become dangerously nonconductive. Instruments of a simple and relatively inexpensive character have been designed and should be available for testing resistance of shoes and floors. Tests should be made daily, and shoes and floors treated if not found in proper condition.

Conductive rubber which is flexible and resilient has recently been developed by several makers. It should be used for the parts of the anesthesia apparatus but must be tested frequently. As at present available it will retain its conductivity long enough to be most useful and it is not too expensive. However, this rubber deteriorates especially when repeatedly flexed or stretched excessively. *Shoe soles made of it are conductive. One pair examined lost its conductivity after four months when purposely abused.* Investigations are now in progress looking to improvement of this conductive rubber. Since no other way is known to insure safety of the anesthesia apparatus, this conductive rubber should be adopted at once until a better product is available. Leather shoes may be used pending improvement of the lasting qualities of the conductivity.

All electrical equipment to be used in operating rooms should be of approved design and construction and should be examined and tested at stated intervals to determine its continued fitness. Routine examinations of insulation resistance should be made at frequent intervals.

Motors used in operating rooms to drive bone saws, suction apparatus and ether anesthetic apparatus should be of approved explosion proof design or enclosed in approved explosion proof cases. These should bear a label or plate stating that the device has been passed by proper authority as explosion proof.

Electric outlets should be of such design and construction that plugs cannot be inserted when the current is on nor removed when it is on. All switches should be of approved explosion proof construction, especially foot switches when ether is used.

X-ray equipment to be employed in operating rooms should be especially designed and constructed to eliminate danger of sparks igniting combustible gases or vapors. Existing equipment can sometimes be modified to accomplish this. No woolen or silk outer garments should be worn in operating rooms by any person (including visitors); also no garments of such synthetics as rayon and shark skin. Woolen blankets should not be used. Conductive rubberized cloth should be employed for operating table mattress covers and pillow covers as soon as available. It is available now but should not be adopted in quantity until the question of durability is answered.

Treatment of linen used on operating table and stretchers on which anesthetized patients are moved may be given to increase its electrical leakage. If dipped in 1 per cent calcium chloride solution and then centrifuged in the manner usual in laundries, it dries so that it cannot be distinguished from ordinary linen by touch, but it is much more conductive. It may be desirable to do this in winter, especially in sections where very low winter temperatures prevail. It will probably not be necessary in summer. Care should always be exercised not to place or remove sheets and blankets with unnecessary suddenness of movement from anesthetized patients. It may not be practical to put linen thus treated through a mangle.

The explosion hazard has been distinctly increased by mixing oxygen with ether vapor and with such gases as ethylene and cyclopropane, all of which are distinctly desirable except for the explosion danger.

Council on Pharmacy and Chemistry

NEW AND NONOFFICIAL REMEDIES

THE FOLLOWING ADDITIONAL ARTICLES HAVE BEEN ACCEPTED AS CONFORMING TO THE RULES OF THE COUNCIL ON PHARMACY AND CHEMISTRY OF THE AMERICAN MEDICAL ASSOCIATION FOR ADMISSION TO NEW AND NONOFFICIAL REMEDIES. A COPY OF THE RULES ON WHICH THE COUNCIL BASES ITS ACTION WILL BE SENT ON APPLICATION.

OFFICE OF THE COUNCIL.

SUSPENSION OF EPINEPHRINE IN OIL, 1:500-N. N. R.—Suspension of epinephrine base 1:500-N. N. R. A 0.2 per cent suspension, containing 1 part of epinephrine U. S. P. to 500 parts of vegetable oil.

Actions and Uses.—Injections of solutions of epinephrine salts (1:1,000) are known to provide prompt but transient relief in the treatment of severe attacks of bronchial asthma by relaxation of the bronchial muscles. Recent evidence indicates that injections of vegetable oil suspensions of epinephrine base (1:500) delay but prolong the action of the alkaloid and thus provide more sustained symptomatic relief in this condition as well as in certain cases of hay fever, urticaria, angioneurotic edema and serum sickness. The usual contraindications to epinephrine must be kept in mind. The preparation should not be given to the aged or to patients with hypertension, because of its prolonged pressor effects. Its sustained action may also prolong disagreeable side effects as well as serious reactions due to overdosage in less tolerant individuals. Local reactions due to irritation by the oil, especially when injected subcutaneously, have also been reported. For this reason it is recommended that it be administered intramuscularly and that particular attention be paid to the possibility of scar formation (fibrosis) at the sites of injection. Reactions from the epinephrine itself may be partially avoided by adequate resuspension (shaking) of any precipitate in the oil, the use of a dry syringe and needle, and precaution to prevent injecting directly into the blood stream by withdrawal of the syringe plunger to determine the location of the needle point in relation to a vessel before each injection and caution in the selection of the initial dose. The use of a small caliber needle to minimize trauma to blood vessels is also recommended. Intravenous injection is, of course, contraindicated.

Dosage.—Intramuscularly from 0.2 cc. to 1.5 cc. (0.4 mg. to 3.0 mg. epinephrine base) administered every eight to sixteen hours. The initial dose for adults should never exceed 0.5 cc. (1 mg. epinephrine base) and caution is necessary when subsequent doses larger than 1.0 cc. are employed because of the unusually large amount of active material introduced (1 cc. of the oil suspension 1:500 is the equivalent of 2 cc. of an epinephrine solution 1:1,000) and its more prolonged action. Doses in excess of 1.5 cc. are not recommended.

Epinephrine in oil occurs as a pale yellow to white milky suspension from which a white solid settles out on standing. Centrifugate an ampule of epinephrine in oil until the crystals have collected in the bottom, open the ampule, decant the clear oil, and wash the residue with two 1 cc. portions of acetone by decantation: the residue, dried at 75 C., melts above 215 C., when heated at a rate of 8 degrees per minute.

Transfer an accurately measured volume of epinephrine in oil, containing approximately 8 mg. of epinephrine to a centrifuge tube. Centrifuge, wash and dry as described above. Dissolve the residue in 0.40 cc. of normal hydrochloric acid, filter and polarize in a micro-polariscope tube. The specific rotation $[\alpha]_D^{25}$ is between -50.0 and -53.5 degrees.

Shake 1.0 cc. of epinephrine in oil with 5.0 cc. of hundredth-normal hydrochloric acid, add 20.0 cc. of distilled water, shake, filter through a paper previously moistened with water. Discard the first 5 cc. and save the remainder for the test. To 20.0 cc. of 1 per cent potassium iodate solution contained in a 50 cc. flask add 0.50 cc. of normal hydrochloric acid, warm to 38 C., and add 10.0 cc. of the filtrate. At the same time, prepare a standard by the method described above, after adding 5.0 cc. of solution containing 8.0 mg. of U. S. P. epinephrine in 20.0 cc. of hundredth-normal hydrochloric acid to 1.0 cc. of peanut oil. Warm the standard and sample solution for fifteen minutes at 38 C., cool to room temperature, and compare in a colorimeter. The epinephrine content is not more than 2.15 nor less than 1.85 mg. per cc.

Epinephrine in Oil, 1:500-Squibb.—A brand of suspension of epinephrine in oil 1:500-N. N. R.

Manufactured by E. R. Squibb & Sons, New York. No U. S. patent or trademark.

Ampules Epinephrine in Oil 1:500-Squibb, 1 cc.—A suspension of 2 mg. powdered epinephrine crystals in 1 cc. of peanut oil.

LIVER EXTRACT U. S. P. ORAL (STEARNS).—

An aqueous concentrate of the anti-pernicious anemia factor from fresh, edible mammalian (equine) livers, to which has been added alcohol 18 per cent as a preservative. The daily oral administration of 60 cc. (2 fluidounces) has been found to produce the standard reticulocyte response defined as 1 U. S. P. unit (oral) when assayed in cases of pernicious anemia as required by the Council.

Actions and Uses.—Liver extract U. S. P. oral (Stearns) is used in the treatment of pernicious anemia during relapse and for the maintenance of normal health in patients with pernicious anemia. See general article Liver and Stomach Preparations, New and Nonofficial Remedies, 1940, p. 320.

Dosage.—For the average adult patient in relapse, 1 or more oral units daily. The maintenance dose should not be less than 60 cc. (1 U. S. P. oral unit) daily.

Manufactured by Frederick Stearns & Co., Detroit. No U. S. patent or trademark.

Liver Extract U. S. P. oral (Stearns) is prepared from livers selected from healthy animals, U. S. government inspected, and as free from fat as possible. The livers are finely ground and extracted several times with water. After precipitation of the protein by heat, the volume of liquid is reduced in vacuo at a low temperature, alcohol added to bring the alcoholic strength to 60 per cent, the precipitate filtered out, and the filtrate again evaporated. The residue is dissolved in water, and alcohol is added to give a final extract containing 18 per cent of alcohol by volume.

LIVER EXTRACT-ENDO.—A dried, powdered, nitrogenous fat-free, water soluble extract, prepared from fresh mammalian livers. The daily oral dose of approximately 25 Gm. (fifty capsules) has been found to produce the standard reticulocyte response defined as 1 U. S. P. unit (oral) when assayed in cases of pernicious anemia as required by the Council.

Actions and Uses.—Liver extract-Endo is used in the treatment of pernicious anemia. See the general article Liver and Stomach Preparations, New and Nonofficial Remedies, 1940, p. 320.

Dosage.—Initial dose, fifty capsules (approximately 25 Gm.) daily until examination shows a satisfactory blood cell count.

The dosage is then kept at a level which will maintain remission.

Distributed by Endo Products, Inc., Richmond Hill, N. Y. No U. S. patent or trademark.

Liver Extract-Endo, Capsules: Fifty capsules represent 1 oral unit.

Liver extract-Endo is prepared as follows: Fresh edible liver is extracted with water at 170 F. for thirty minutes and filtered. The filtrate is concentrated in vacuo and then dried in vacuo. The dried material is powdered and filled into capsules. Each capsule contains the extract from 10 Gm. of fresh liver.

ANTIPNEUMOCOCCIC SERUM, TYPE II (See New and Nonofficial Remedies, 1940, p. 431).

Mulford Biological Laboratories, Sharp & Dohme, Inc., Philadelphia.

Antipneumococcic Serum Type II, Refined and Concentrated-Mulford.—(See New and Nonofficial Remedies, 1940, p. 432): It is marketed in packages of one ampule-vial containing 20,000 units and packages of one ampule-vial containing 50,000 units accompanied by a vial containing a 1:10 dilution of serum for the sensitivity test.

SULFATHIAZOLE (See THE JOURNAL, Jan. 25, 1941, p. 308).

Sulfathiazole-Parke, Davis.—A brand of sulfathiazole-N. N. R.

Manufactured by Parke, Davis & Co., Detroit. No U. S. patent or trademark.

Tablets Sulfathiazole-Parke, Davis, 0.5 Gm. (7.7 grains).

Tablets Sulfathiazole-Parke, Davis, 0.25 Gm. (3.85 grains).

PHYSIOLOGICAL SOLUTION OF SODIUM CHLORIDE (See New and Nonofficial Remedies, 1940, p. 379).

The following dosage forms have been accepted:

Ampules of Physiological Solution of Sodium Chloride, 10 cc.

Ampules of Physiological Solution of Sodium Chloride, 20 cc.

Prepared by Endo Products, Inc., Richmond Hill, N. Y.

MANDELIC ACID (See New and Nonofficial Remedies, 1940, p. 332).

Mandelic Acid-Gane.—A brand of mandelic acid-N. N. R. Manufactured by Gane's Chemical Works, Inc., New York (Gane & Ingram, Inc., New York, distributor). No U. S. patent or trademark.

BENZEDRINE SULFATE (See New and Nonofficial Remedies, 1940, p. 233).

The following additional dosage form has been accepted:

Benzedrine Sulfate Tablets, 5 mg.

SATURDAY, MARCH 22, 1941

"ACUTE PNEUMONITIS" VIRUS

Apparently Weir and Horsfall¹ of the International Health Laboratories, New York, have been able to isolate and identify the specific virus of the disease variously known as "acute pneumonitis,"² "acute diffuse bronchiolitis"³ or "capillary pneumonia." Five years ago Bowen⁴ described this disease, which he termed "acute influenza pneumonitis." Since then, epidemics have been reported with increasing frequency in a half dozen American states as well as in England and France, from which it is apparent that the disease can assume pandemic proportions. "Acute pneumonitis" is characterized by a remarkably high morbidity and in some institutions or localities over 50 per cent of all persons have contracted the disease. Primarily it is an inflammation of the mucous membranes of the respiratory tract, usually limited to the nose, pharynx and larynx but occasionally extending to the trachea and bronchi and in a few cases to the bronchioles and lungs. Constitutional symptoms are usually in proportion to the extent and intensity of the mucosal inflammation. Patients with the milder form of the disease usually complain of coryza, obstruction of the nose, malaise, frontal headache, weakness, dizziness, muscular pains, sweating and anorexia, with fever lasting on an average for two and a half days.⁵ Patients with lung involvement may have fever for from four to eight days. Convalescence is usually rapid, without deaths thus far in uncomplicated cases.

Earlier attempts to determine the etiologic factor of this influenza-like disease were unsuccessful. Routine blood cultures were invariably negative. Bacteriologic studies of nasopharyngeal exudates failed to reveal

organisms that could be considered of etiologic significance. *Haemophilus influenzae*, for example, was never found, and there was a remarkable scarcity of pneumococci. Intranasal instillation of nasopharyngeal secretions into ferrets gave transient toxic symptoms,⁶ with failure in attempted passive transfer. Aside from demonstrating the absence of the usual influenza virus, these inoculation tests were inconclusive.

The apparent recent increase in the frequency of this disease and its tendency to become pandemic have rendered it of sufficient importance to warrant vigorous attempts to determine the causative agent. Accordingly, about a year ago Weir and Horsfall attempted to infect all the usual laboratory animals by intranasal instillation of throat washings from clinically typical cases. Among the animals tested were ferrets, mice, guinea pigs, rabbits, monkeys, opossums, skunks, woodchucks, voles, deer mice and Syrian hamsters, all of which proved insusceptible to the presumptive pneumonitis virus. The inoculated animals did not develop symptoms of infection, and at necropsy demonstrable lesions were not found in the respiratory tract.

In the hope of finding a susceptible animal, it was finally decided to try the mongoose, an animal available in abundance in the Caribbean islands but whose importation into the United States is prohibited. By modern methods of transportation and communication, however, it was found feasible to divide the work between the New York laboratory and the British Tuberculosis Research Station at Kingston, Jamaica. Frozen or glycerinated throat washings, filtrates and experimental necropsy material were readily transported back and forth between the two laboratories.

Frozen and vacuum dried throat washings from New York patients or glycerinated filtrates of clinical washings were injected intranasally into mongooses, with control injections of sterile 0.85 per cent sodium chloride solution. The inoculated mongooses were observed for abnormalities in temperature, respiration and appetite and for the presence or absence of diarrhea for ten to twelve days, at the end of which time they were anesthetized, bled by cardiac puncture and killed. Of the 90 mongooses inoculated with the first series of four throat washings, 64 per cent developed pulmonary lesions, one third of them showing generalized deep red pulmonary hyperemia without consolidation and two thirds a similar hyperemia surrounding plum colored consolidations. The consolidated areas varied from a single large lesion in one lobe to multiple lesions in several lobes. Examinations of the pulmonary lesions by both microscopic and cultural methods almost invariably showed the lungs to be bacteriologically sterile.

From the infected lungs, however, serial passage was possible to normal mongooses, control tests with emul-

sions of normal mongoose lungs giving negative results. Filtration tests with both the human nasal washings and emulsions of mongoose lungs showed that the etiologic factor readily passes through the pores of a Berkefeld V or N filter. The virus is readily propagated on the chorioallantoic membrane of the developing chick embryo, thirty serial egg passages having been effected without apparent loss of virulence or specificity.

Normal mongoose serum and serums of infected mongooses during the early stages of the disease failed to demonstrate neutralizing antibodies. Late convalescent mongoose serum, however, is specifically virucidal. Patients with acute pneumonitis also show negative acute phase serums, with neutralizing antibodies appearing only during convalescence. Cross neutralizing tests showed that the newly discovered virus has no antigenic component common with the influenza virus or with any other virus thus far available for cross immunization tests. Viruses from different patients and from different geographic areas were apparently identical qualitatively though slightly different in virulence. Studies of natural methods of infection have shown that the experimental virus disease in the mongoose is readily spread by contact. The evidence therefore seems complete that the mongoose infecting virus is the cause of the current incipient pandemic of acute pneumonitis.

Aside from its epidemiologic importance the work of Weir and Horsfall is noteworthy and may long serve as a model of speed and effectiveness in international medical research, an inspiring example of preparedness for future epidemiologic emergencies.

PHYSICAL FITNESS FROM TWO TO TWENTY

For more than a century countless workers in medical and allied fields have been actively engaged in the study of human growth, development and physical condition. Attention has already been drawn¹ to a series of papers on growth by Wetzel, of Western Reserve University, in Cleveland. This work, and a more extensive analysis² published since then, are the foundations for the most recent report by the same investigator on a method for evaluating physical fitness, which appears in this issue of *THE JOURNAL*.³ Up to now, by far the greatest advances in the field have pertained to infancy and have formed the basis for the theory and practice of pediatrics. But for the group of persons beyond infancy there has been less formal and less certain guidance, notwithstanding the fact that millions have already been spent on innumerable surveys con-

ducted among preschool, school and college populations. The search for suitable methods of assessing physical fitness has resulted in the proposal of many indexes based on a great variety of body measurements, as well as in an enormous amount of reduplicated effort.

The literature on physical fitness is one of the most voluminous in the entire domain of medicine, as attested by the compilation of 2,500 abstracts made in 1927 at the request of the Children's Bureau.⁴ On the question of physical fitness among children the committee in charge expressed the view that "no single factor is of greater importance in dealing with the health of nations." In the past fifteen years, however, it has been realized that large scale surveys have proved to be, if not wholly fruitless, at least much less productive of useful results than had been hoped for. A recent commentator⁵ has summarized this situation and has suggested that "research workers concentrate on the construction of valid methods of determining nutritional status rather than making surveys which are of doubtful significance because of the inaccuracies of the estimates upon which their findings are based." Thus the great obstacle to progress in this field has been the lack of a suitable, uniform and practical method for the detection of the physically unfit.

Wetzel has approached the problem from the point of view that physical fitness implies "normal" growth and development, whereas physical unfitness is associated with disturbances of growth and nutrition. His former inquiries into the nature of growth have enabled him to set out a simple graphic chart for following up past, and for predicting future, progress in physical development. In brief, his present contribution seems to provide a simple method for the quick, practical and wholly objective evaluation of the physical condition of any person up to and including maturity. This is of vital importance to more than forty million persons⁶ in this country alone who are under 20 years of age. The method, as Wetzel is careful to point out, does not supplant the physician; instead its direct purpose is to aid the physician in judging the nutritional state with greater certainty, rapidity and efficiency than before, since nothing beyond the usual measurements of height, weight and age is required for a rating.

The clue to the new use of heights and weights is undoubtedly to be found in what Wetzel calls the "grid" or "channel system" in which those data are to be plotted. By so doing, one obtains an immediate graphic estimate of physique or body build, development, nutritional grade, physical status, age advancement and maturation. What these attributes have signified in the

6. White House Conference Addresses and Abstracts, New York, Century Company, 1931, p. vii.

past has always been left largely to individual interpretation. Wetzel's approach, however, has resulted for the first time in a unique, precise, yet simple definition of each of these terms. Other factors, such as basal heat production and daily caloric intake, may also be read from the chart for every level between infancy and maturity. Successive heights and weights taken at annual or semiannual intervals establish an invaluable record of progress that may be compared directly with the standards contained in the chart, which themselves offer guidance in the way of prognosis. For example, Wetzel has shown that healthy children tend to develop along given channels "as though these were preferred paths," without undergoing significant alteration in their physique or showing much departure from their own age schedules. "Cross channel progress," on the other hand, indicates either "overnutrition" or "undernutrition," depending on the direction of advance.

While the results cited contribute to the anthropology and genetics of human development and especially to the problem of somatotyping, they are of more immediate concern to the medical examiner. He is now enabled to recognize at a glance whether a child is safely situated in a channel where its nutrition cannot be seriously questioned or whether it belongs to the abnormal groups. The grid, like a screen, is thus intended to separate subjects who are in need of special attention from those whose progress is unsatisfactory. In tests on several thousand Cleveland school children the method has already shown a 94 per cent degree of reliability in picking out the subjects whom experienced examiners call "poorly nourished" or "borderline." Administrators, actuaries and others who carry the great responsibility of directing community and school health work can hardly fail to recognize in the "grid technic" a means of rapidly extracting the vast amount of information which is otherwise buried in existing records and of putting this to good use. The subjectivity of the present day "quick" inspection may well give way to the objective ratings offered by the grid method of analysis. The child who, by methods in current use, is examined but two or three times in his entire school career will be brought up at once, if necessary, and incipient disease will no longer gain a start. The plea of all medicine has been prevention. To this end the grid method is clearly directed. Wetzel's contribution has broken fresh ground in its field; but it has also provided a workable scheme that will recreate interest in existing data and in associated problems, the solution of which should be nearer because the avowed objective of so many undertakings in the past—a reliable method of assessing physical condition—is now at hand.

Workers and all agencies of child welfare will be able with this technic to check the population for defi-

ciency and to render aid. Not the least of the advantages of this method will be the uniformity with which the situation in one locality may be more truly compared with others. The results of remedial programs will likewise have a uniform basis of comparison, and the effects of organized efforts to deal with local problems will soon distinguish which measures are worth while and which are not. A nation engaged in national defense cannot afford to overlook the sound advice of Francis Galton⁷ "to rightly appraise the effects of external conditions upon development." For this task Wetzel's method of appraising physical fitness comes forward at an opportune time.

Current Comment

FREQUENCY OF EXCRETION OF POLIO-MYELITIS VIRUS IN HUMAN STOOLS

According to the improved technic recently introduced by Howe and Bodian,¹ of Johns Hopkins University, poliomyelitis virus can be demonstrated in infectious concentration in 70 per cent of the human stools voided during the first five days of the disease. This is nearly three times the frequency demonstrable by classic methods of intracerebral or intraperitoneal inoculation.² In the new technic untreated stools are emulsified in a small volume of distilled water and the emulsion frozen in a solid carbon dioxide bath. One cc. of the thawed emulsion is repeatedly introduced into the nostrils of a rhesus monkey, and the mucous membrane gently rubbed with a pipe cleaner. Although such emulsions contain a rich bacterial flora, bacterial infection apparently never takes place. During the recent Baltimore epidemic the Johns Hopkins investigators applied this simplified technic to stool specimens taken from 14 different paralytic patients. Ten were found to contain sufficient poliomyelitis virus to produce typical paralysis and central nervous system lesions in monkeys. The average incubation period after massive intranasal instillation was about two weeks. Cord to cord passage to a second generation monkey was successful in all cases tested. The simplicity and effectiveness of the new technic, which can be applied without recourse to elaborate means for sterilization and concentration of the inoculum, renders it a promising supplement to routine technical methods. In the opinion of the Baltimore investigators, fecal excretion of poliomyelitis virus in 70 per cent of the cases is epidemiologically significant during the first five days of the disease.

MEDICAL PREPAREDNESS

In this section of The Journal each week will appear official notices by the Committee on Medical Preparedness of the American Medical Association, announcements by the Surgeon Generals of the Army, Navy and Public Health Service, and other governmental agencies dealing with medical preparedness, and such other information and announcements as will be useful to the medical profession.

ARMY RESERVE OFFICERS ORDERED TO ACTIVE DUTY FOURTH CORPS AREA

The following additional medical reserve officers have been ordered to active duty by the Commanding General, Fourth Corps Area, which comprises the states of Tennessee, North Carolina, South Carolina, Alabama, Georgia, Mississippi, Florida and Louisiana:

ALBRIGHT, Samuel L., 1st Lieut., Belmont, N. C., Fort Benning, Ga.
ANDERSON, Charles A., 1st Lieut., Clinton, S. C., Orlando, Fla.
ANDERSON, Clyde O., 1st Lieut., St. Petersburg, Fla., Fort Benning, Ga.
ANDERSON, William E., 1st Lieut., Dyersburg, Tenn., Fort Benning, Ga.
BARHAM, Berlin F., 1st Lieut., Mayoden, N. C., Camp Stewart, Ga.
BAXLEY, Harry B., Captain, Blakely, Ga., Fort Bragg, N. C.
BAXLEY, Warren C., 1st Lieut., Macon, Ga., Fort Benning, Ga.
BLAND, Charles A., 1st Lieut., Forest City, N. C., Fort Bragg, N. C.
BLUMBERG, Alfred, Major, Oteen, N. C., Camp Shelby, Miss.
BRINT, Douglas L., 1st Lieut., Bolivar, Tenn., Camp Stewart, Ga.
BROWN, Alton G., 1st Lieut., Rock Hill, S. C., Fort Bragg, N. C.
BROWN, Cecil H., 1st Lieut., Jackson, Tenn., Camp Stewart, Ga.
BROWN, William E., 1st Lieut., Summerville, Ga., Orlando, Fla.
BRUNSON, Joseph W., 1st Lieut., Camden, S. C., Fort Benning, Ga.
BUGG, Everett I., Jr., 1st Lieut., Durham, N. C., Fort Bragg, N. C.
BURN, Edward M., 1st Lieut., Charleston, S. C., Fort Jackson, S. C.
BUSSABARGER, Robert A., 1st Lieut., Memphis, Tenn., Fort Benning, Ga.
CARROLL, Bruce D., 1st Lieut., Miami, Fla., Fort Benning, Ga.
CHAMBLEE, John S., 1st Lieut., Windsor, N. C., Fort McClellan, Ala.
CLAVERIE, Eugene H., 1st Lieut., Lafayette, La., Orlando, Fla.
COE, Isaac S., 1st Lieut., Memphis, Tenn., Fort Bragg, N. C.
COFFEY, James C., 1st Lieut., Cliffside, N. C., Camp Stewart, Ga.
ELDRIDGE, Jesse C., Lieut. Col., Chattanooga, Tenn., Knoxville, Tenn.
FAISON, Thomas G., Captain, Winton, N. C., Fort Jackson, S. C.
FULLER, William A., Jr., 1st Lieut., Atlanta, Ga., Fort McPherson, Ga.
GARRISON, Ralph B., 1st Lieut., Hamlet, N. C., Fort Benning, Ga.
HOLLOWELL, Claude V., 1st Lieut., Corapeake, N. C., Fort Bragg, N. C.
HULSEY, John M., Jr., Captain, Gainesville, Ga., Orlando, Fla.
LITTON, James H., 1st Lieut., Milledgeville, Ga., Camp Blanding, Ga.
LOYD, Preston C., 1st Lieut., Kinston, N. C., Fort Devens, Mass.
MARTIN, David W., 1st Lieut., West Palm Beach, Fla., Fort Benning, Ga.
MARTIN, Marion T., 1st Lieut., Memphis, Tenn., Camp Polk, La.
MASSEY, James L., 1st Lieut., Quincy, Fla., Fort Jackson, S. C.
MCALL, Robert E., Jr., 1st Lieut., Marion, N. C., Fort Jackson, S. C.
RAMEY, Daniel R., Jr., 1st Lieut., Holt, Ala., Camp Polk, La.
RAWLS, Jack L., 1st Lieut., Bastrop, La., Fort Bragg, N. C.
ROGERS, Howard M., Captain, St. Petersburg, Fla., Camp Polk, La.
SNELLING, William R., 1st Lieut., Fernandina, Fla., Camp Lee, Va.
STANFIELD, William W., 1st Lieut., Leaksville, N. C., Camp Polk, La.
STEPHENSON, Samuel Logan, Jr., 1st Lieut., Savannah, Tenn., Fort Jackson, S. C.

TAKACY, Theodore L., 1st Lieut., Slater, S. C., Fort Benning, Ga.
TERHUNE, Samuel R., Captain, Birmingham, Ala., Camp Polk, La.
TIPTON, William M., 1st Lieut., Knoxville, Tenn., Camp Shelby, Miss.
WATSON, Walter H., 1st Lieut., Charleston, S. C., Camp Polk, La.
WILSON, Frank E., 1st Lieut., Tarboro, N. C., Camp Forrest, Tenn.
WOODALL, Paul S., Captain, Birmingham, Ala., Orlando, Fla.

Orders Revoked

AKERS, Noel M., 1st Lieut., McIntyre, Ga.
ANDERSON, Clyde O., 1st Lieut., St. Petersburg, Fla.
AUSTIN, Frederick D., Jr., 1st Lieut., Charlotte, N. C.
BARHAM, Berlin F., 1st Lieut., Mayoden, N. C.
BIRD, Donald P., 1st Lieut., Lakeland, Fla.
BOOKER, John P., 1st Lieut., Walhalla, S. C.
BROWN, Ralph E., 1st Lieut., Barnwell, S. C.
BROWN, Randall G., 1st Lieut., Graymont, Ga.
BURNS, Cornelius B., 1st Lieut., New Orleans.
CHASTAIN, Joseph R., 1st Lieut., Buford, Ga.
CLAVERIE, Eugene H., Jr., 1st Lieut., Lafayette, La.
COFFEY, James C., 1st Lieut., Cliffside, N. C.
CRANE, Wesley T., 1st Lieut., Auburn, Ala.
DAWSON, George R., Captain, Charleston, S. C.
FILLINGIM, David B., 1st Lieut., Savannah, Ga.
FOGEL, Julius M., 1st Lieut., Fort Benning, Ga.
FULLER, William A., 1st Lieut., Atlanta, Ga.
GARRISON, Ralph B., 1st Lieut., Hamlet, N. C.
GIBBONS, George E., 1st Lieut., Hampshire, Tenn.
GLENN, Francis W., 1st Lieut., Miami, Fla.
HEWES, Archibald C., 1st Lieut., Gulfport, Miss.
HOLT, Howard P., 1st Lieut., Rodessa, La.
HOWDON, William M., 1st Lieut., Miami, Fla.
HOWELL, Robert S., 1st Lieut., Coral Gables, Fla.
JERNIGAN, Henry C., 1st Lieut., Black Mountain, N. C.
JOYNER, Rayburn N., 1st Lieut., Marianna, Fla.
KING, Ralph E., 1st Lieut., Winnsboro, La.
LAMAR, Carlos P., 1st Lieut., Miami, Fla.
LAMB, Roland D., 1st Lieut., Columbus, Miss.
LANCE, Vernal L., 1st Lieut., Blairsville, Ga.
MARTIN, David W., 1st Lieut., West Palm Beach, Fla.
MARTIN, Robert B., III, 1st Lieut., Shellman, Ga.
MICKAL, Abe, 1st Lieut., New Orleans.
MILLER, Cecil E., 1st Lieut., Sarasota, Fla.
MOULEDOUS, Shelley J., 1st Lieut., Abbeville, La.
PHILLIPS, Stonewall J., Captain, Oakdale, La.
ROGERS, Hunter B., Captain, Miami, Fla.
SPRUELL, William H., 1st Lieut., Russellville, Ala.
TAKACY, Theodore L., 1st Lieut., Slater, S. C.
TAYLOR, Guy F., 1st Lieut., Laurel Springs, N. C.
VAUDRY, James W., 1st Lieut., New Orleans.
WAGNER, Rudolph T., 1st Lieut., Miami Beach, Fla.
WILSON, Richard A., 1st Lieut., Wilmington, N. C.

SIXTH CORPS AREA

The following additional medical reserve officers have been ordered to extended active duty by the Commanding General, Sixth Corps Area, which comprises the states of Wisconsin, Illinois and Michigan:

ADLER, Samuel, 1st Lieut., Oregon, Ill., Replacement Center, Camp Grant, Ill.
ALTMAN, Harris P., 1st Lieut., Marengo, Ill., Station Hospital, Fort Bliss, Texas.
BACKER, Meyer, 1st Lieut., Chicago, Station Hospital, Fort Sill, Okla.
BAILIS, Jack M., 1st Lieut., Pittsfield, Ill., 2d Med. Lab., Fort Sam Houston, Texas.
BAKER, Alonzo N., 1st Lieut., Marion, Ill., 30th Division, Fort Jackson, S. C.
BALLIN, Michael, 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.
BALLOU, John W., 1st Lieut., Rushville, Ill., Station Hospital, Fort Bliss, Texas.
BARBER, Kent W., 1st Lieut., Quincy, Ill., Station Hospital, Fort Bliss, Texas.
BARD, Eli, 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
BARNETT, Andrew F., 1st Lieut., West Frankfort, Ill., Station Hospital, Fort Bliss, Texas.
BERARDI, James B., 1st Lieut., Dwight, Ill., Station Hospital, Fort Sam Houston, Texas.

BIELINSKI, Brunon, 1st Lieut., Manteno, Ill., Station Hospital, Fort Sam Houston, Texas.
BITTER, Reuben, Captain, Oshkosh, Wis., 12th Cavalry, Fort Brown, Texas.
BLADES, James E., 1st Lieut., Sidney, Ill., 4th Medical Supply Depot, Fort Sam Houston.
BOLLES, Carlton S., 1st Lieut., DePere, Wis., Station Hospital, Fort Sam Houston, Texas.
BOYER, Richard C., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
BOYNTON, Melbourne W., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
BRAZE, Alexander, Captain, Rockford, Ill., Station Hospital, Camp Grant, Ill.
BROWN, David Joseph, 1st Lieut., Manteno, Ill., Station Hospital, Fort Sill, Okla.
BROWN, Wilbert O., 1st Lieut., Chicago, Station Hospital, Fort Sill, Okla.
BUCHHOLZ, Alexander M., 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.
BURLEY, Robert D., 1st Lieut., Beardstown, Ill., Station Hospital, Fort Bliss, Texas.
BUSHNELL, Lowell F., 1st Lieut., Highland Park, Ill., Station Hospital, Fort Sheridan, Ill.
BUTT, Arthur J., Jr., 1st Lieut., Chicago, 30th Division, Fort Jackson, S. C.

- CARLIN, George W., 1st Lieut., Wilmington, Ill., Station Hospital, Fort Sill, Okla.
- CARTER, Kenneth L., 1st Lieut., St. Louis, Station Hospital, Fort Bliss, Texas.
- CARY, John F., 1st Lieut., Sheboygan, Wis., 1st Medical Squadron, Fort Bliss, Texas.
- CHABNER, Louis, 1st Lieut., Shelbyville, Ill., Station Hospital, Fort Sam Houston, Texas.
- CHYNOWETH, William R., Major, Battle Creek, Mich., Station Hospital, Fort Sam Houston, Texas.
- COHEN, Jacob, 1st Lieut., Granite City, Ill., 27th Division, Fort McClellan, Ala.
- COHLER, Bernard E., 1st Lieut., Chicago, 30th Division, Fort Jackson, S. C.
- COHRS, Clarence C., 1st Lieut., Harvey, Ill., Station Hospital, Fort Sam Houston, Texas.
- COLLINS, Harold J., 1st Lieut., LaHarpe, Ill., Replacement Center, Camp Grant, Ill.
- CROTTY, John P., 1st Lieut., East St. Louis, Ill., 30th Division, Fort Jackson, S. C.
- CZERWINSKI, Anthony, Captain, Springfield, Ill., 107 Obs. Squadron, Camp Beauregard, La.
- DAVIS, John L., 1st Lieut., Quincy, Ill., Station Hospital, Fort Sill, Okla.
- DeFRANCOIS, Walter, 1st Lieut., Oak Park, Ill., Station Hospital, Fort Sill, Okla.
- DeJONGH, Edwin, 1st Lieut., Detroit, 12th Cavalry, Fort Bliss, Texas.
- DEW, W. A., Lieut. Col., Belleville, Ill., Station Hospital, Fort Sill, Okla.
- DEWHIRST, Ernest M., Captain, Danville, Ill., Station Hospital, Camp Grant, Ill.
- DICKERSON, Donald L., 1st Lieut., Danville, Ill., Station Hospital, Fort Bliss, Texas.
- DICKEY, Marvin M., 1st Lieut., Richmond, Ill., Station Hospital, Fort Sill, Okla.
- DIETRICH, Edwin, 1st Lieut., Fithian, Ill., Station Hospital, Fort Bliss, Texas.
- DOBIN, Norman B., 1st Lieut., Chicago, Station Hospital, Fort Sill, Okla.
- DUBIEL, Charles R., 1st Lieut., Chicago, 27th Division, Fort McClellan, Ala.
- EASLEY, John H., 1st Lieut., Wayne, Mich., Replacement Center, Camp Grant, Ill.
- FEIN, Harry S., 1st Lieut., Chicago, Fitzsimons General Hospital, Denver.
- FEINHANDLER, Harold S., 1st Lieut., Chicago, Station Hospital, Fort Custer, Mich.
- FISHER, Robert E., 1st Lieut., Mayville, Mich., 38th Infantry, Fort Sam Houston, Texas.
- FORD, Walter A., Lieut. Col., Sheboygan, Wis., Station Hospital, Fort Sill, Okla.
- FORTNER, Roscoe J., Captain, Three Rivers, Mich., 30th Division, Fort Jackson, S. C.
- FRIEDMAN, Isadore E., 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.
- GAFF, John H., Lieut. Col., Chicago, Station Hospital, Fort Sam Houston, Texas.
- GOFF, Marcellus H., Captain, Chicago, 366th Infantry, Fort Devens, Mass.
- GOLDSTEIN, Robert M., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
- GOODMAN, Louis, 1st Lieut., Monroe, Mich., Station Hospital, Fort Sam Houston, Texas.
- GORELICK, Martin J., 1st Lieut., Dearborn, Mich., Station Hospital, Fort Sill, Okla.
- GOURLEY, Eugene V., 1st Lieut., Detroit, Station Hospital, Fort Sill, Okla.
- GRAHAM, Charles M., 1st Lieut., Altona, Ill., 27th Division, Fort McClellan, Ala.
- GUELDER, Louis H., 1st Lieut., Fort Atkinson, Wis., Station Hospital, Fort Sill, Okla.
- GUTOV, Benjamin R., 1st Lieut., Detroit, 27th Division, Fort McClellan, Ala.
- HAEREM, Alf T., 1st Lieut., Chicago, Station Hospital, Fort Sill, Okla.
- HALPERIN, Isadore, 1st Lieut., Chicago, 27th Division, Fort McClellan, Ala.
- HARTFORD, William S., Lieut. Col., Champaign, Ill., Station Hospital, Fort Sam Houston, Texas.
- HEIDENREICH, John R., 1st Lieut., Daggett, Mich., Station Hospital, Fort Sam Houston, Texas.
- HIRSCH, Donald A., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
- HOFFENBERG, Nathan L., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
- HOHMAN, Roy Max, 1st Lieut., Chicago, 27th Division, Fort McClellan, Ala.
- JACOBS, Maurice B., 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.
- JAMES, William D., 1st Lieut., Oconomowoc, Wis., Station Hospital, Fort Sill, Okla.
- KINZEL, Robert J., 1st Lieut., Litchfield, Mich., Station Hospital, Fort Sill, Okla.
- KNAUS, William E., 1st Lieut., East St. Louis, Ill., 30th Division, Fort Jackson, S. C.
- KOVACH, Emery P., 1st Lieut., Detroit, 30th Division, Fort Jackson, S. C.
- KWINN, Frank C., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
- LeFEVRE, George L., Major, North Muskegon, Mich., Station Hospital, Camp McCoy, Sparta, Wis.
- LERNER, Louis S., Captain, Chicago, Medical Supply Depot, Fort Sam Houston, Texas.
- LINN, Herman J., 1st Lieut., Chicago, Station Hospital, Fort Custer, Mich.
- LOWELL, Vivion F., 1st Lieut., Ypsilanti, Mich., 30th Division, Fort Jackson, S. C.
- MARCHMONT-ROBINSON, Harry, 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.
- MARTIN, Robert E., 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.

- SCHACH, Arthur C., 1st Lieut., Rockford, Ill., Station Hospital, Fort Bliss, Texas.
- SCHROTH, George J., 1st Lieut., Chicago, Station Hospital, Fort Sam Houston, Texas.
- SEID, Benjamin, 1st Lieut., Chicago, Station Hospital, Fort Sill, Okla.
- SEIFERT, Edward H., Lieut. Col., Galesburg, Ill., Station Hospital, Fort Bliss, Texas.
- SHAPIRO, Louis B., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.
- SIMPSON, Reed M., 1st Lieut., Hardin, Ill., Station Hospital, Fort Sill, Okla.
- SLOAN, Fred R., 1st Lieut., Wauwatosa, Wis., Station Hospital, Fort Sam Houston, Texas.
- SLUSSER, Gerald A., 1st Lieut., Villa Grove, Ill., Station Hospital, Fort Bliss, Texas.
- SPECTOR, Maurice J., 1st Lieut., Detroit, Station Hospital, Fort Sill, Okla.
- SULLIVAN, James M., 1st Lieut., Milwaukee, Station Hospital, Fort Sam Houston, Texas.
- TEASLEY, Benager C., 1st Lieut., Robinson, Ill., Station Hospital, Fort Sill, Okla.
- TERWILLIGER, Edwin, 1st Lieut., South Haven, Mich., Station Hospital, Fort Sam Houston, Texas.
- TOUSIGNANT, Albert N., Captain, Oconto, Wis., Station Hospital, Fort Sill, Okla.
- TROTTER, Jay D., 1st Lieut., Carthage, Ill., Station Hospital, Fort Sill, Okla.
- WILSON, Clyde S., Lieut. Col., Belleville, Ill., Station Hospital, Camp Grant, Ill.
- WINER, Allen E., 1st Lieut., Chicago, Station Hospital, Fort Bliss, Texas.

SEVENTH CORPS AREA

The following additional medical reserve officers have been ordered to extended active duty by the Commanding General, Seventh Corps Area, which comprises the states of North Dakota, South Dakota, Minnesota, Nebraska, Iowa, Kansas, Missouri, Arkansas and Wyoming.

ALDRICH, Herrick John, 1st Lieut., Sheridan, Wyo., William Beaumont General Hospital, El Paso, Texas.
ALMER, Lennart Emmanuel, 1st Lieut., Moorhead, Iowa, Fort Knox, Ky.
ANDERSEN, Elmer John Tiemeyer, 1st Lieut., Montgomery City, Mo., Fort Francis E. Warren, Wyo.
BEBER, Meyer, Captain, Omaha, Fort Leonard Wood, Mo.
BENESH, Louis Alfred, 1st Lieut., Minneapolis, Fort Francis E. Warren, Wyo.
BENJAMIN, Harold Garner, 1st Lieut., Minneapolis, Fort Knox, Ky.
BOILER, William F., Major, Iowa City, Fort Leonard Wood, Mo.
BRICKER, Eugene Myron, 1st Lieut., Columbia, Mo., Fort Leonard Wood, Mo.
CHRISTIANSEN, Charles Clifford, Dixon, Iowa, 1st Lieut., Fort Francis E. Warren, Wyo.
COHEN, Harold David, Lieut. Col., Des Moines, Iowa, Fort Leavenworth, Kan.
DRIVER, Donn Raymond, 1st Lieut., Bismarck, N. D., Fort Riley, Kan.
EGGLESTON, Donald Edwin, 1st Lieut., Kingman, Kan., Camp Murray, Wash.
FLESCH, Bernard Alton, 1st Lieut., Lake City, Minn., William Beaumont General Hospital, El Paso, Texas.
FLYNN, Joseph Eugene, 1st Lieut., Iowa City, Army and Navy General Hospital, Hot Springs, Ark.
FRIEDMAN, Burt, 1st Lieut., St. Louis, Fort Ord, Calif.
GRIMM, Benjamin Hayes, 1st Lieut., Sidney, Neb., Fort Riley, Kan.
HAMILTON, Benjamin Charles, Major, Jefferson, Iowa, Camp Murray, Wash.
HAYMOND, Harold Everest, Captain, Perry, Iowa, Fort Meade, S. D.
HOLLAND, Frank Flynn, 1st Lieut., St. Joseph, Mo., Fort Leavenworth, Kan.
HOSKINS, James Howard, Major, Wahpeton, N. D., Fort Leonard Wood, Mo.
IVERS, George Urban, 1st Lieut., Fargo, N. D., Fort Leonard Wood, Mo.
JANSONIUS, John Willard, 1st Lieut., Eldora, Iowa, Fort Knox, Ky.
JOFFE, Harold Herman, 1st Lieut., Duluth, Minn., Fort Riley, Kan.
KATZOVITZ, Hyman, 1st Lieut., St. Paul, Fort Francis E. Warren, Wyo.
KING, Richard Sidney, 1st Lieut., Cass Lake, Minn., Fort Francis E. Warren, Wyo.
KITCHEN, William Meyer, 1st Lieut., Moberly, Mo., William Beaumont General Hospital, El Paso, Texas.
KLINGNER, George Malcolm, 1st Lieut., Springfield, Mo., Fort Francis E. Warren, Wyo.

EIGHTH CORPS AREA

The following additional medical reserve corps officers have been ordered to active duty by the Commanding General, Eighth Corps Area, which comprises the states of Colorado, Arizona, New Mexico, Oklahoma and Texas:

AKINS, Jack Odie, 1st Lieut., Tulsa, Okla., Fort Sam Houston, Texas.
ALLEN, George Scott, 1st Lieut., Burnet, Texas, Fort Bliss, Texas, Station Hospital.
ANDERSON, Robert E., 1st Lieut., Woodmen, Colo., Fort Bliss, Texas.
ANTHONY, William Dodd, 1st Lieut., Gallup, N. M., 25th Infantry, Fort Huachuca, Ariz.
BARTHELD, Floyd T., 1st Lieut., McAlester, Okla., Camp Bowie, Texas.
BATE, Thomas H., 1st Lieut., Phoenix, Ariz., Station Hospital, Fort Bliss, Texas.
BECK, Harold J., 1st Lieut., Jersey City, N. J., Station Hospital, Fort Sam Houston, Texas.
BERGENER, Karl L., 1st Lieut., Tulsa, Okla., 25th Infantry, Fort Huachuca, Ariz.
BICKEL, Robert David, 1st Lieut., Gallup, N. Mex., Fort Bliss, Texas, Station Hospital.
BLAIR, William M., 1st Lieut., Wharton, Texas, Camp Bowie, Texas.
BROWN, Jesse Benjamin, 1st Lieut., Belton, Texas, Camp Barkley, Texas.
BUNKLEY, Thomas A., 1st Lieut., Stamford, Texas, 25th Infantry, Fort Huachuca, Ariz.
BURGESS, George, 1st Lieut., Dallas, Texas, Camp Bowie, Texas.
CALONGE, Guy E., 1st Lieut., La Junta, Colo., Station Hospital, Fort Bliss, Texas.
CARSON, John M., 1st Lieut., Shawnee, Okla., 36th Division, Camp Bowie, Texas.
CASH, Aentus Peter, 1st Lieut., La Junta, Colo., Camp Barkley, Texas.
COCHRAN, John Robert, 1st Lieut., Fort Worth, Texas, San Angelo, Texas, Basic Flying School.
CONDELL, Lyle A., 1st Lieut., Safford, Ariz., 25th Infantry, Fort Huachuca, Ariz.
CRAWFORD, John M., Captain, Carrizo Springs, Texas, 36th Division, Camp Bowie, Texas.
CURRY, John Russell, 1st Lieut., Blackwell, Okla., Camp Barkley, Texas.
DANIELL, Alfred H., 1st Lieut., Brownfield, Texas, San Angelo, Texas, Basic Flying School.
DIVINE, James B., 1st Lieut., Graham, Texas, 25th Infantry, Fort Huachuca, Ariz.
EDENS, Clarence, 1st Lieut., San Antonio, Texas, Camp Bowie, Texas.

KRAUSE, Richard Alfred, 1st Lieut., West Point, Neb., Fort Riley, Kan.
LEIFER, William Warren, 1st Lieut., Kansas City, Mo., Fort Leonard Wood, Mo.
LEVERENZ, Carleton Walter, 1st Lieut., St. Paul, Fort Francis E. Warren, Wyo.
LIEBERMAN, B. Albert, Jr., Captain, Kansas City, Mo., Fort Leonard Wood, Mo.
LINDGREN, Russell Cyrus, 1st Lieut., Minneapolis, Army & Navy General Hospital, Hot Springs, Ark.
LUPPENS, Albert Franklin, Captain, Kansas City, Mo., Fort Leonard Wood, Mo.
MANGIAMELI, Carl L., 1st Lieut., Omaha, Fort Leonard Wood, Mo.
MARKER, John Israel, Lieut. Col., Davenport, Iowa, Fitzsimons General Hospital, Denver.
McADAM, Charles Rush, 1st Lieut., St. Louis, Fort Leonard Wood, Mo.
McCLAIN, Monroe Dixon, 1st Lieut., Little Rock, Ark., Camp Joseph T. Robinson, Ark.
MORROW, James Joseph, Major, Austin, Minn., Fort Leavenworth, Kan.
NEAS, Ingall Howard, 1st Lieut., Kansas City, Kan., Fort Leonard Wood, Mo.
PUDLEINER, Harold Grant, 1st Lieut., Canton, Mo., Fort Riley, Kan.
REAGAN, Charles Henry, Captain, Marked Tree, Ark., Fort Bliss, Texas.
RETTENMAIER, Albert Joseph, 1st Lieut., Kansas City, Kan., Fort Francis E. Warren, Wyo.
ROGERS, Earl Elvin, 1st Lieut., Lincoln, Neb., Fort Leonard Wood, Mo.
RUSH, Weaver Aldus, Major, Beatrice, Neb., Fort Leonard Wood, Mo.
SCHWYZER, Hanns Carl, 1st Lieut., St. Paul, Fort Leonard Wood, Mo.
SILSBY, Harry Dozier, 1st Lieut., Springfield, Mo., Fort Ord, Calif.
SINCLAIR, Richard Clyde, 1st Lieut., St. Louis, Fort Ord, Calif.
SPIELHAGEN, Guenther F., 1st Lieut., Iowa City, Jefferson Barracks, Mo.
SQUIBB, Joseph William, 1st Lieut., Springfield, Mo., Fort Francis E. Warren, Wyo.
WAKEMAN, Don Conklin, 1st Lieut., Topeka, Kan., Fort Leonard Wood, Mo.
WANNER, Jay George, Captain, Rock Springs, Wyo., Fort Francis E. Warren, Wyo.
WHITE, Charles Herbert, 1st Lieut., Kansas City, Mo., Fort Leonard Wood, Mo.

Orders Revoked

COHEN, Harold David, Lieut. Col., Des Moines, Iowa, Fort Leavenworth, Kan.
GLAZE, Kenneth Franklin, 1st Lieut., St. Louis, Fort Lewis, Wash.
HAGEBUSCH, Omer Ernst, 1st Lieut., University City, Mo., William Beaumont General Hospital, El Paso, Texas.
HAWKINSON, Raymond Paul, Captain, Robbinsdale, Minn., Fort Des Moines, Iowa.
HENDERSON, Richard Gray, 1st Lieut., St. Louis, William Beaumont General Hospital, El Paso, Texas.
LEVIN, Abraham Jacob, 1st Lieut., St. Louis, Fort Lewis, Wash.
SINCLAIR, Richard Clyde, 1st Lieut., St. Louis, Fort Ord, Calif.

EVANS, Alfred, 1st Lieut., Perry, Okla., Camp Barkley, Texas.
FORTNEY, Paul N., 1st Lieut., Beaumont, Texas, Fort Bliss, Texas, Station Hospital.
FRANK, Charles H., Captain, Texarkana, Texas, Station Hospital, Fort Sill, Okla.
GOETH, Carl F., 1st Lieut., San Antonio, Texas, Camp Bowie, Texas.
GOSSETT, Robert Francis, 1st Lieut., San Antonio, Texas, Fort Bliss, Texas, Station Hospital.
GRAMMER, James Henry, 1st Lieut., Fort Worth, Texas, Camp Barkley, Texas.
GRAY, Paul Milton, 1st Lieut., Corpus Christi, Texas, Lowry Field, Colo.
GUTHRIE, Aubrey E., 1st Lieut., Floydada, Texas, 349th Field Artillery, Fort Sill, Okla.
HARTWICK, Fred Walter, 1st Lieut., Victoria, Texas, San Angelo, Texas, Basic Flying School.
HENDERSON, Walter T., 1st Lieut., Dallas, Texas, 36th Division, Camp Bowie, Texas.
HEWATT, John W., Captain, Fort Worth, Texas, Lowry Field, Colo.
HULSEY, Simeon H., Captain, Fort Worth, Texas, Station Hospital, Sam Houston, Texas.
HYDER, Prentiss L., 1st Lieut., Corpus Christi, Texas, 36 Division, Camp Bowie, Texas.
JOHNSTON, Leonidas A. S., 1st Lieut., Holdenville, Okla., Station Hospital, Fort Sam Houston, Texas.
JONES, Edmund Dennis, Captain, Beaumont, Texas, 20th Coast Artillery, Fort Crockett, Texas.
KATZ, Solomon M., 1st Lieut., Dallas, Texas, Camp Barkley, Texas.
KENT, Melvin Lloyd, 1st Lieut., Mesa, Ariz., Station Hospital, Fort Sill, Okla.
KILMAN, P. T., Captain, Malakoff, Texas, Camp Bowie, Texas.
KING, Thomas C., 1st Lieut., Electra, Texas, Station Hospital, Fort Sam Houston, Texas.
KUPKA, John F., 1st Lieut., Haskell, Okla., Camp Barkley, Texas.
LAWRENCE, Buell A., 1st Lieut., Houston, Texas, Station Hospital, Fort Sill, Okla.
LIPSCOMB, Cuvier P., 1st Lieut., Denison, Texas, Lowry Field, Colo.
MAGLIOLO, Andrew J., Jr., 1st Lieut., Galveston, Texas, Fort Sam Houston, Texas.
MAGNESS, William H., Captain, Denton, Texas, 45th Division, Camp Barkley, Texas.
MARCHMAN, Oscar M., Jr., 1st Lieut., Longview, Texas, Kelly Field, Texas.
MARSHALL, Reagan M., 1st Lieut., Houston, Texas, Lowry Field, Colo.
MARTIN, Claud A., 1st Lieut., Austin, Texas, Camp Barkley, Texas.
McCLURE, Harold M., 1st Lieut., Chickasha, Okla., Camp Barkley, Texas.

McMULLEN, James Wallace, Major, Denver, Colo., Fort Bliss, Texas, Station Hospital.
McVEIGH, Joseph Fieldings, Captain, Fort Worth, Texas, Fort Sam Houston, Texas, Station Hospital.
MILBURN, Kennedy A., Captain, San Antonio, Texas, Lowry Field, Colo.
MILLER, John Burr, Jr., 1st Lieut., San Antonio, Texas, Camp Bowie, Texas.
NEWLIN, William H., 1st Lieut., Sallisaw, Okla., Camp Barkley, Texas.
OATES, L. S., 1st Lieut., Center, Texas, Station Hospital, Fort Sill, Okla.
OXMAN, Bertram Sidney, 1st Lieut., Wetumka, Okla., Fort Bliss, Texas.

Orders Revoked

APPEL, Myron Henry, 1st Lieut., Alice, Texas.
BAZE, Roy Ellis, 1st Lieut., Chickasha, Okla.
BLAIR, William M., 1st Lieut., Wharton, Texas.
CASH, Aeneas Peter, 1st Lieut., La Junta, Colo.
CAUSEY, Paul Spencer, 1st Lieut., Douglas, Ariz.

COWART, O. H., 1st Lieut., Bristow, Okla.
ETTER, Edward F., Captain, Sherman, Texas.
GALLAHER, Paul C., 1st Lieut., Shawnee, Okla.
GARCIA, Robert E., 1st Lieut., Parker, Ariz.
GOSSETT, Robert Francis, 1st Lieut., San Antonio, Texas.
HAMPTON, Dan E., 1st Lieut., Denver.
HAMRA, Henry, M., 1st Lieut., Phillips, Texas.
HERNDON, James H., 1st Lieut., Dallas, Texas.
JERMSTAD, Robert J., 1st Lieut., Fort Worth, Texas.
KING, Everett G., 1st Lieut., Duncan, Okla.
McCLURE, Harold M., 1st Lieut., Chickasha, Okla.
MILLER, Hubert Wainwright, 1st Lieut., Artesia, N. Mex.
NEWMAN, M. H., 1st Lieut., Shattuck, Okla.
SHERE, Norbert L., 1st Lieut., Denver.
SHUPE, Reed Dalton, Captain, Phoenix, Ariz.
WATERS, Floyd Leo, 1st Lieut., Hugo, Okla.
WHEELER, Norman O., 1st Lieut., Globe, Ariz.
WOODALL, John B., 1st Lieut., Kerrville, Texas.
WOODARD, Thad L., 1st Lieut., Dallas, Texas.

SURGICAL HOSPITALS IN THE FIELD

Three surgical hospitals for use in the field are to be activated in June: the 61st Surgical Hospital, Fort Meade, Md., the 63d Surgical Hospital, Fort Oglethorpe, Ga., and the 74th Surgical Hospital, Fort Warren, Wyo. The Army Medical Corps is now carefully studying two types of surgical hospitals at the Medical Field Service School, Carlisle Barracks, Pa. Consideration is now being given to housing surgical hospitals in bus-type ambulances, each of which will operate its own power unit. Originally these hospitals were designed to be housed in trailers. The ambulance types, however, are said to have several advantages, as they can be built closer to the ground and, by having their own power unit, will be able to leave a dangerous zone quickly. All the foregoing three surgical hospitals will be training units, each with three officers and one hundred and ten enlisted men, most of whom will be given a thirteen weeks basic training course at the replacement centers at either Camp Lee, Va., or Camp Grant, Ill., before being sent into further unit training in operation of the surgical hospitals. These hospitals are to be completely equipped with every facility found in base hospitals.

APPOINTMENT IN RESERVE CORPS OF GRADUATES OF APPROVED SCHOOLS

The War Department announced, February 18, that Corps Area commanders are authorized to waive the requirements for recommendation of an examining board contained in the third column of paragraph 19 b (8) AR 140-5, and so much of paragraph 20 c of the same regulation as requires reference of application to examining boards, in the case of applicants for appointment in the Medical Corps Reserve from American schools approved by the Council on Medical Education and Hospitals of the American Medical Association, at the time of successful completion of the required four year course of medical instruction, whether the degree of doctor of medicine is conferred at that time or withheld until after an additional period of practical experience. Recommendations under this authority for the appointment in the Medical Corps Reserve of prospective graduates of approved medical schools will be made on a special form which will be forwarded by the adjutant general's office and must be signed by the president or dean of the institution and by the corps area surgeon. Application should not be submitted unless appointment is desired by the prospective graduate, and it appears probable that he will when graduated be eligible and qualified professionally and physically. The papers should be carefully checked to insure that they are completely and correctly prepared. Recommendation sheets and W. D., A. G. O. form numbers 170 and 63 should be assembled for each applicant and all papers for graduates of the same institution should be forwarded to this office under one cover on or before April 15, accompanied by a list of those recommended for appointment, arranged alphabetically. It is essential that every effort practicable be made to avoid delay in submitting recommendations and applications. Applications for appointment in the Medical Corps Reserve from prospective graduates of approved schools at universities or colleges where R. O. T. C. training for other arms and services is conducted should be forwarded separately from applications from prospective R. O. T. C. graduates.

NEW YORK INDUCTION BOARDS PASS 76 PER CENT FOR MILITARY SERVICE

More than 76 per cent of the men examined by physicians of the local induction boards in New York City during three induction periods were found physically fit for military service, according to a report by Col. Samuel J. Kopetzky, chief of the medical division of Selective Service for the city.

Of 17,540 men examined, 13,422 were qualified for full or limited military service. There were 9,925, or 56.6 per cent, available for full service and 3,497, or 19.93 per cent, classified as available for limited service.

The report showed that of the 9,925 passed by the local boards 8,883 were finally accepted by the Army for service. Of the 1,042 rejected when they reached Army induction stations 487 were classified as qualified for limited service and the remaining 555 as unqualified for any service. The study noted two important differences in procedure by the local physicians and those of the Army: local boards are not able to make a roentgenogram of every chest nor are the neuropsychiatric examinations as extensive as they are at the induction stations. Some men were temporarily deferred because they were suffering from transient illnesses but were or will be subsequently inducted.

Defects of teeth or vision led all other reasons for rejection. There were 1,995, or 11.37 per cent, rejections for defects of teeth and gums, while deficient vision accounted for 1,959, or 11.7 per cent. The third largest category was diseases of the heart or blood vessels, 10.75 per cent of all disqualifications.

In addition to the three principal causes for rejection, there were fifteen other groups of defects prevalent in the following order: extremities 7.94 per cent, abdominal organs and wall 5.63 per cent, mental and nervous disorders 4.24 per cent, height-weight 3.97 per cent, ears 3.75 per cent, genitourinary organs and venereal diseases 3.60 per cent, lungs and chest wall 2.70 per cent, mouth, nose and throat 1.67 per cent, spinal 1.39 per cent, endocrine and metabolic disorders 1.39 per cent, skin 0.41 per cent, general and miscellaneous 0.29 per cent, diseases of blood and blood-forming organs 0.11 per cent, head 0.08 per cent, and neck 0.06 per cent.

Commenting on the approximately 10 per cent of rejections by Army physicians of men previously qualified by local board physicians, the report pointed out that local board examinations are not carried out under ideal conditions. The local boards do not have full equipment nor do they have specialists as readily available as is the case at Army headquarters. The rate of rejections declined to about 15 per cent at the end of the period from 25 per cent at first. The city's 280 local boards now have an average of two or three physicians each, compared with an original allotment of one each.

This patriotic contribution is carried on by these New York physicians gratis after their usual day's work in the private practice of medicine.

NAVY MONTHLY MEETING

Lieut. Albert R. Behnke Jr. discussed "Physiological Effects of Variations in Barometric Pressure on Naval Personnel with Relation to Aviation, Deep Sea Diving and Internal Medicine" before a meeting of the medical and dental officers of the Navy on duty in the District of Columbia and vicinity, February 3.

FEBRUARY 27—MORNING
TESTIMONY OF BENJAMIN BRENT SANDIDGE
(CONTINUED)

(The witness identified further documents.)

Mr. Allen:—I wish to read U. S. Exhibit 473, copy of letter on the letterhead of the Central Dispensary and Emergency Hospital, dated Nov. 1, 1937, from B. B. Sandidge, superintendent of the Emergency Hospital, to Dr. Allen E. Lee:

"Dear Dr. Lee:

"Your name has been withdrawn from the list of those to whom the Courtesy Privileges of treating patients at Emergency Hospital is extended, due to the fact that we are advised you are not a member of the Medical Society of the District of Columbia."

I will now read Exhibit 474, which is a carbon copy of a letter dated Nov. 10, 1937, from B. B. Sandidge to Dr. Allen E. Lee:

"Dear Dr. Lee:

"On Nov. 1, 1937, we wrote you to the effect that your name had been withdrawn from the list of those to whom the courtesy privilege of treating patients at Emergency Hospital is extended, due to the fact that you were no longer a member of the Medical Society of the District of Columbia.

"We have since learned that this information was not correct and that your name is still on the membership roster of the District Medical Society, and I am writing to apologize for this error on our part.

"As you are aware, one of the requirements at our Institution for a doctor to be extended the privilege of treating patients at this hospital is that he be a member of the District Medical Society, and in view of the fact that your status is still such, and until we are officially notified to the contrary, you are extended courtesy privileges as was your status heretofore.

"We wish to assure you that no personal element entered into this action, and again apologizing for this misunderstanding, we beg to remain,

"Very truly yours,

"EMERGENCY HOSPITAL.
"B. B. Sandidge, Superintendent."

CROSS EXAMINATION

By Mr. Leahy:

The witness named various members of the executive staff of Emergency Hospital.

By Mr. Leahy:

Q.—Tell us how many were on the Executive Staff of Emergency Hospital.

A.—Eleven.

Q.—What portion of the minutes to which your attention was directed refers to the fact that Major Blair was discussing the fact that some hospitals were granting privileges to Dr. Selders while Emergency had not; is that right?

A.—Yes.

Q.—And the minutes say there was a good deal of discussion about it, discussion at great length; is that right?

A.—Yes.

Q.—Is it not true that at that time, on Feb. 18, 1938, there was a rule of the Emergency Hospital that only members of the District Medical Society could be on the staff of that hospital?

A.—Yes.

Q.—And that rule had been in force some years, had it not?
A.—Yes.

Q.—Do you recall now what year it was that Emergency Hospital adopted the regulation that only members of the District Medical Society could be on the staff of the hospital?

A.—In 1936.

Q.—April, 1936. That was long before you ever heard of Group Health?

A.—It was prior to that.

Q.—Do you remember whether there was any particular incident which was the cause of that discussion?

A.—No definite incident that I can recall; no, sir.

By Mr. Leahy:

Q.—After you have looked over the letter, Exhibit 473, dated Jan. 27, 1938, is not that the subject of discussion which is mentioned in this minute, the permission of Dr. Selders to take Miss Abbott in Garfield when, under your rule, he could not be admitted in your hospital?

Mr. Lewin:—We object to that. The substance of the minute is in the minute.

THE COURT:—He may state whether or not that was the subject that brought about the minute which is recorded there. He may state that.

A.—Might I, in getting my dates correct, ask if this meeting was held after the letter was written to Mr. Aspinwall?

Mr. Lewin:—Obviously the witness is not testifying from his independent recollection.

THE COURT:—I do not know. I will wait and see.

Mr. Lewin:—It is perfectly obvious from that request.

THE COURT:—He may be refreshing his recollection about it.

The Witness:—Well—

Mr. Lewin:—I object to this unless the witness has an independent recollection.

THE COURT:—Do you recall what brought about that minute?

The Witness:—I believe—it is my recollection that this had some bearing on the case being transferred to Garfield and treated after it left Emergency. That was one reason for the discussion in the minutes.

THE COURT:—The next question.

By Mr. Leahy:

Q.—Is it not a fact, Mr. Sandidge, that at that time the regulation which you stated—

Mr. Lewin:—I object to that. The question is leading, and there is no necessity for it.

Mr. Burke:—This is cross examination.

Mr. Lewin:—I don't care if it is. There is no hostility from this gentleman, and there is no reason for leading an argumentative question.

THE COURT:—Cross examination always permits leading questions.

Mr. Lewin:—Not in every case, your Honor. It depends on the attitude of the witness.

THE COURT:—The rule against leading questions applies to direct examination; and it may be permitted in direct examination under certain circumstances.

Proceed.

By Mr. Leahy:

Q.—Mr. Sandidge, when the minute states that the Board of Emergency expressed its appreciation of Major Blair's support of their Courtesy Staff, does not that refer to the fact that Major Blair had supported the rule and regulation which you said had been in effect since April, 1936, that only members of the District Medical Society could practice in the hospital?

A.—That is right.

Q.—That rule did not refer, however, to emergency cases, did it?

A.—No, sir.

Q.—Because in your report, which is United States Exhibit 480, the annual report for the year ending Dec. 31, 1938, you state on one of the pages to which your attention has been directed, page 7:

"No patient is ever turned away from Emergency Hospital without treatment and advice."

Is that statement true?

A.—Yes, sir.

Q.—So that the rule referred to in the minutes and about which appreciation was expressed is the rule that a doctor cannot habitually practice his profession in your hospital until he has been admitted to courtesy privilege; is that right?

Mr. Lewin:—We object to that. The documents are in and they speak for themselves.

THE COURT:—I think it is argumentative. Objection sustained.

By Mr. Leahy:

Q.—Showing you, also, a letter which you wrote to Dr. Lee—and that letter is dated Nov. 1, 1937—when you wrote that letter to Dr. Lee did you write that letter also because of the rule which had been enforced since April 1936?

A.—Yes, sir.

Q.—And that is the only reason you wrote it, is it not?

A.—Yes.

Q.—There was not anything personal against Dr. Lee, was there?

A.—Not to my knowledge.

Q.—You did not write it to Dr. Lee because he was on G. H. A. staff, did you?

A.—I wrote it because we thought he had not been extended courtesy privileges, that he was not a member of the District Medical Society.

Q.—It was not because he was connected with Group Health Association in any way that you wrote the letter?

A.—No.

Q.—In other words, whether he was or was not connected made no difference; the fact was that if he was not on the staff that would bring forth that letter?

A.—That is correct.

Q.—When you found you were mistaken and he was still a member of the District Medical Society, you wrote him the next letter, did you not?

A.—Yes.

Q.—In which you apologized for the fact that you had been mistaken, and wrote and told him that his courtesy privileges were continued; is that right?

A.—That is true.

Q.—With reference to these other documents which were shown you, one as far back as July 29, 1937, and the other Dec. 2, 1937, we will not take time to read them over. You recall them when you see them, do you not, Mr. Sandidge?

A.—Yes.

Q.—Do you know whether you ever saw those in the Emergency Hospital or not?

A.—Whether I ever saw them?

Q.—Yes; either one or both of them.

A.—Yes; they came over my desk.

Q.—Do you recall what you did with them after they came over your desk?

Mr. Lewin:—Objected to. It is beyond the scope of the direct examination, perfectly plainly so. He can prove all those letters in his case.

THE COURT:—What would make that question germane to the direct examination?

Mr. Leahy:—I think the statement was made that they came out of the files of Emergency Hospital—

Mr. Lewin:—There is no doubt about that. This witness testified they went over his desk. Now you go further and want to know what he did with them.

Mr. Leahy:—They could have gone over his desk and then into the wastebasket.

Mr. Lewin:—Maybe they did, but this is not the way to prove it.

By Mr. Leahy:

Q.—I will ask this question. Was any action of any kind taken, if you know, with reference to these by which—

Mr. Lewin:—We object to that.

Mr. Leahy:—Pardon me—by which they were ordered to be kept in the files of the hospital?

Mr. Lewin:—Do not answer that until his Honor rules.

THE COURT:—He may answer that.

The Witness:—Will you put that question again?

By Mr. Leahy:

Q.—Was any action taken by your hospital under which you were directed to preserve these in the files of the hospital?

A.—None other than routine. All such matters are filed.

Q.—And you followed the routine and put them in the files?

A.—Yes.

Q.—Has your attention been directed to pages 6, 7 and 8 of this report before, Mr. Sandidge?

Mr. Kelleher:—By whom?

Mr. Lewin:—He prepared it. Is it not his report?

Mr. Leahy:—I don't know.

Mr. Lewin:—It is the report of the Superintendent. It says so.

The Witness:—Yes.

Mr. Lewin:—We object to the question.

THE COURT:—It is just preliminary, Mr. Lewin.

By Mr. Leahy:

Q.—This report would be made up each year in the ordinary course of your business as Superintendent; is that true?

A.—That is true.

Q.—And it is a report to whom?

A.—To the Board of Directors.

Q.—And it is a report about what?

Mr. Lewin:—Objected to. It speaks for itself.

THE COURT:—Of course it does.

Mr. Lewin:—Why should he characterize it then?

THE COURT:—When I agree with you there is no use arguing.

Mr. Lewin:—I beg your pardon, your Honor. I did not know you were agreeing with me.

Mr. Leahy:—I do not want all the details of it; but generally we have a book introduced and probably five or six hours later, on another day, something will be read from it.

THE COURT:—The title of the book shows what it is.

Mr. Leahy:—But I do not know what the book contains. It says, "Annual Report." I do not know what it is an annual report of.

Mr. Kelleher:—Why don't you read it?

Mr. Leahy:—All right; I will, if that is what you want.

THE COURT:—I want this bickering to stop. That does not get us anywhere on either side.

By Mr. Leahy:

Q.—Let us look this over together. In the first paragraph you state, on page 6, to which your attention has been drawn:

"ANNUAL REPORT OF THE SUPERINTENDENT"

"In this period of changes, new systems being adopted and the general rapid pace of experimentation, in plans for the health needs and hospitalization of our people who are in need of same, it would seem appropriate at this time to take a few minutes for retrospection.

"The great need in our city, for an institution of the character of the Central Dispensary and Emergency Hospital, was manifested as far back as the year 1871, for at that time the majority of supposed-to-be trivial accidents were taken to the police stations where the police surgeon was summoned. In case he could not be located, a doctor was sent for. Much unnecessary suffering was caused by this, and the consequences of neglect (often unavoidable) were sometimes disastrous.

"Public spirited citizens quickly recognized this inadequate condition of caring for the unfortunate, and this need resulted in the establishment of the present Emergency Hospital. The Charter of Incorporation (1882) reads as follows:

THE COURT:—Pardon me. What is the purpose of reading that?

Mr. Leahy:—Because I want to get in, if I can at this time, the connection of this document with Mr. Sandidge.

Mr. Lewin:—I will tell you the connection. He wrote it.

Mr. Richardson:—We did not ask you to tell us.

THE COURT:—I have no objection, if you are reading it to the jury.

Mr. Leahy:—So that the jury will know what it is all about:

"The Charter of Incorporation (1882) reads as follows: 'That the particular object of the Association or Society is to provide a suitable building in the city of Washington, D. C., for a dispensary where all needy persons without distinction may be provided gratuitously with medical and surgical service and treatment and with medicine.'

"In the following paragraphs I will endeavor to describe briefly how well the hospital has kept faith with the public throughout these many years.

"For the first year's operation \$150 was subscribed, and this, together with \$278 appropriated by the Legislature of the District, was the sum total for the treatment of 511 patients.

"For the year of 1938, there was a money turn-over in the amount of \$568,658.75. The greater part of this money was spent in the city of Washington, and employment was furnished to a daily average of some 344 persons on the hospital payroll, in addition to more than 100 special nurses daily engaged by the patients and other personnel in departments financed independently of the hospital proper.

"Therefore, as it stands today, from the standpoint of a financial enterprise alone, Emergency Hospital takes its place as one of the important business organizations of our city.

"The number of hospital days furnished patients for the year was 85,109.

"The number of dispensary visits furnished patients for the year was 25,110.

"The number of emergency room visits furnished patients for the year was 14,569.

"The number of ambulance trips furnished patients for the year was 3,313.

"No patient is ever turned away from Emergency Hospital without treatment and advice. If the nature of the patient's illness is a type as to make it dangerous for those patients already hospitalized, such first aid as is needed is given, and arrangements made for proper transfer.

"In living up to its charter and meeting the many demands for charity and part-charity during the year that this report covers, the hospital had to donate more than \$75,000 from its own resources, with a consequent deficit for the year of \$22,940.34, despite the most careful and economical management consistent with the high type of service which has been characteristic through its career.

"The hospital management is indeed grateful for the patronage of those patients who paid more than the cost of care, for this addition to cost was a direct contribution to public charity (the hospital being organized NOT FOR PROFIT). However, this type of patient was not sufficient in number at prevailing rates established in the hospital to carry all of this additional load, and philanthropic support was not as generous as in some former years. Nevertheless, the hospital authorities have followed the practice that if the hospital continues to maintain a deep regard for the health of the community as a whole, pay and free alike, the public as well as the Government will appreciate this humanitarian and necessary foresight, and will respond in due course to its financial needs.

"Aside from this great humanitarian work, which the hospital is doing, the great numbers of fine and splendidly trained young doctors and nurses who receive all or a part of their professional training here should not be overlooked. It is really inspiring to have them return, from all sections of the country, to pay a visit and speak in grateful appreciation of the excellent training they received here.

"Notwithstanding this great volume of work carried on year after year, the hospital has kept pace with modern methods and equipment. The physical plant has not been allowed to depreciate, new additions have been added. Modern equipment has been installed, such as air-conditioning units, devices for more direct communication, and many such improvements for the comfort of and service to patients and doctors."

Then follow some additions to the equipment, some of the more important highlights of 1938, such as the establishment of a blood transfusion fund, the purchase of a Bell fracture table, laboratories, and so forth, and then it says:

"The Ladies Auxiliary Board, as usual, has been active throughout the year, and we are indebted to this Board of fine women for their deep interest in the hospital and the splendid assistance they render. Their secretary's report is submitted separately, as well as reports from the various department heads."

Then "I record here with sorrow and a feeling of great loss the passing during the year" of certain people interested and closely identified with the hospital, and he signs it as his 19th Annual Report.

By Mr. Leahy:

Q.—Now, Mr. Sandidge, with respect to Emergency Hospital, is there any expense incurred in the maintenance and operation of that hospital which is not incurred for the maintenance and operation of that not-for-profit institution in the care of the sick?

A.—All funds are used for hospital purposes.

Q.—Where your report, without going into details, marks out the number of people on the payroll, the number of nurses, and so forth, those are necessary attendants required by you in the operation and maintenance of the hospital for the care of the sick; is that right?

A.—Yes, sir.

Mr. Lewin:—We will concede that.

By Mr. Leahy:

Q.—In other words, there is no business venture in Emergency, is there?

Mr. Lewin:—Just a moment. We object to that. It is written in the report that "as it stands today, from the standpoint of a financial enterprise alone, Emergency Hospital takes its place as one of the important business organizations of our city."

Mr. Leahy:—May I have the question answered? I certainly can cross examine him about his report.

Mr. Kelleher:—Further objection, on the ground that it calls for a conclusion, your Honor.

THE COURT:—He has already stated it, I think.

By Mr. Leahy:

Q.—There is no commercial enterprise, however, in the conduct of your hospital, is there?

Mr. Lewin:—We object to that. It is a matter of opinion.

THE COURT:—It appears quite clearly that the institution is a non-profit institution. It carries on its business along that line, and all of its funds are directed to that particular purpose.

Mr. Leahy:—If it is not disputed, we will not go any further on that.

Mr. Lewin:—We have not attempted to dispute it.

Mr. Leahy:—You are going to dispute it; otherwise you would not have introduced that word "business."

By Mr. Leahy:

Q.—Did you have a rule in your hospital, Mr. Sandidge, that each year the courtesy list is checked and that each year the members on the courtesy list are elected to privileges under that list?

A.—I would not say that it is a rule that it be checked each year. Automatically it is kept up to date, and each year each member of the courtesy list is notified that privileges for the ensuing year are extended.

Q.—Was there anything unusual in checking the courtesy list?

A.—Just to bring it up to date, to go over it and see that it was in correct order.

RE-DIRECT EXAMINATION

By Mr. Allen:

Q.—Mr. Sandidge, can you testify that it is a fact that every physician that used the courtesy privileges of Emergency Hospital during the year of 1937 was a member of the District Medical Society or one of the two adjoining societies?

A.—No; I could not testify that there were no exceptions.

Q.—Do you know it to be a fact that there were exceptions to that?

A.—During 1937 I could not answer that definitely, because I do not recall.

Q.—If we could show you otherwise or prove to the court otherwise, that there were other members, you would agree that that would be correct?

Mr. Leahy:—That is argumentative, of course.

THE COURT:—Yes.

By Mr. Allen:

Q.—Is it not true that as late as June 1, 1938, the staff found it expedient to make a recheck to further enforce that rule and regulation which you adopted?

A.—I think that is true; yes.

Q.—And it had not been completely enforced up to that date, which caused the staff to go ahead and attempt to enforce it strictly?

A.—When the courtesy staff file was originally made up the ruling that they had to be members of the District Medical Society was not in force, and naturally there were some doctors who were not members, and they were not automatically dropped. Some of them I feel quite sure were carried on. I mean, the courtesy list was not brought right up to date so that it would coincide with the membership of the District Medical Society.

Q.—Was it brought completely up to date as the result of this meeting of June 1, 1938?

A.—There may have been some exceptions. I do not recall the names, however.

Q.—At that late date there still might have been some exceptions, to your knowledge?

A.—Yes.

Mr. Allen:—I wish to read one paragraph from the minutes of June 1, 1938:

"A special meeting of the Executive Staff was held in Emergency Hospital. The recommendations of the courtesy committee in regard to approval or disapproval of applications for the courtesy staff were approved by the staff. It was directed that the courtesy committee carefully check the list of the doctors who had been given courtesy privileges in Emergency and who are not members of the Medical Society or their local medical societies in the case of physicians who are non-residents of the District, and that these members be notified that they must join the Medical Society, or the hospital will be obliged to revoke their privileges.

Mr. Kelleher:

Exhibit 446-A is a carbon copy of a letter written by Dr. Fishback to "Dear John," on the letterhead of the Washington Academy of Surgery, dated Dec. 9, 1937. The witness testified that the "John" referred to was Dr. John Lyons:

"I have transmitted your report to George Washington University Hospital."

The next paragraph is not important and I shall not read it, but the next paragraph is as follows:

"I am anxious to talk to you before you reach any decision on Dr. Selders, especially if there is feeling that he will be disapproved purely because of his connection here in Washington. As a matter of

policy and tact, and I believe for the good of general public attitude toward the profession, the question of his relationship to the Group Health Association, Inc., should not be permitted to enter the discussion."

Exhibit 444 is the original minutes of the defendant Washington Academy of Surgery of a meeting held on Friday, Dec. 10, 1937. I shall read only the paragraph appearing on page 2 of the minutes:

"Discussion concerning the Group Health Association ensued. It was suggested that the professional qualifications of the surgeon of that organization alone be considered, as a matter of public policy. However a motion of Dr. Sager's was passed requesting the Hospital Privilege Committee to consider the ethics of any applicant as well as his strictly surgical training and experience. Ethics were understood to be as defined by the American Medical Association. It was emphasized that investigation should include knowledge of an applicant's earlier behavior in other communities before coming to this locality."

It is signed by Dr. F. C. Fishback.

Exhibit 445 is a letter from the secretary of the defendant Washington Academy of Surgery to the Superintendent of George Washington University Hospital, Washington, D. C., dated Dec. 8, 1937, and it reads as follows:

"Sir:

"The Committee on Hospital Privileges recommends:—

1. Approval of Dr. Howard H. Strine for general surgery.
2. Approval of Dr. Carolyn S. Pincock for minor surgery.
3. Disapproval of Dr. Allen E. Lee to do general surgery.
4. Disapproval of Dr. Paul Harnet to do surgery.
5. Application of Dr. Ross Taggart is for privileges in normal obstetrics and therefore is returned without action.
6. The committee is attempting to obtain further information on Dr. Raymond E. Selders, and is not yet able to act on his application.

"Very sincerely yours,

"Secretary,"

"Washington Academy of Surgery".

Exhibit 447 is a carbon copy of a letter from the secretary of the Washington Academy of Surgery, F. C. Fishback, to Col. P. M. Ashburn, Columbia Hospital for Women, Washington, D. C., dated Jan. 31, 1938, reading as follows:

"Dear Colonel Ashburn:

"I have today been informed by the Committee on Hospital Privilege that they recommend the disapproval of the application of Dr. Raymond Selders to do general surgery.

"Very sincerely yours,

"F. C. Fishback,

"Secretary, Washington
Academy of Surgery."

Exhibits 448, 449 and 450 are letters from the secretary of the defendant Washington Academy of Surgery to Providence Hospital, Georgetown University Hospital, and Garfield Memorial Hospital, all of which are dated Jan. 31, 1938, in which it is stated that:

"The committee recommends disapproval of the application of Dr. Selders."

TESTIMONY OF FRANCIS J. EISENMAN

DIRECT EXAMINATION

Francis J. Eisenman said he is superintendent, Garfield Hospital, and was in 1937 and 1938. He identified the annual report, lists of committees and correspondence.

He listed also surgeons on the staff.

He also identified minutes of the committees.

Q.—And when extracted they would have the markings that appear here?

A.—They appear to be the proper minutes.

Q.—Is it customary for minutes to be kept of the Executive Committee?

A.—Yes.

Q.—Whose duty is it to keep the minutes of the Executive Committee?

A.—The Secretary of the Advisory Committee.

Q.—Who was he?

A.—Dr. McGovern.

Q.—Does his name appear at the end of the minutes?

A.—It does.

Q.—So, in view of that, can you say that they are the minutes of the Executive Committee called for by the subpoena?

A.—As far as I know, they are the minutes.

Q.—Have you any reason to doubt it?

A.—No reason other than—

Q.—Other than what?

A.—Well, I don't know.

Q.—Do you think I brought some fake minutes to you?

A.—No; I mean I can't remember what transpired.

Q.—No; I know that. But read them over and see if they are the minutes.

THE COURT:—He says he has no reason to doubt it. Why cross examine him on it?

Mr. Lewin:—If your Honor is satisfied, all right. I have had trouble with this sort of thing before. If I do not ask enough questions I am not successful, and if I do I still seem to be not successful.

Mr. Richardson:—Nothing from nothing is still nothing. Here the witness identified correspondence.

CROSS EXAMINATION

By Mr. Leahy:

Q.—I want to show you Exhibit 486. Is there any signature on that paper at all?

A.—No, sir.

Q.—Exhibit 483 was shown you, which is a carbon copy. Do you recall having seen the original of which this is a carbon?

A.—Yes.

Q.—And on the date which is mentioned there?

A.—I could not verify the date, except from the record.

Mr. Leahy:—Has this been offered?

Mr. Lewin:—No.

Mr. Leahy:—May I ask you if you plan to offer this in evidence?

Mr. Lewin:—I do not see what that has to do with it. You can cross examine on the authenticity of these documents.

Mr. Leahy:—The point is this, if your Honor please. He has simply handed up some documents and asked the witness to identify signatures thereon, and then, after the witness is excused, they are going to offer them all in evidence.

THE COURT:—I cannot control that, Mr. Leahy. I cannot compel the Government to offer documents.

Mr. Lewin:—If you have doubts as to their authenticity you can cross examine.

Mr. Leahy:—I know what I can do. I don't need your instructions.

Mr. Lewin:—I am sorry.

TESTIMONY OF FLORA HITCH

DIRECT EXAMINATION

By Mr. Kelleher:

Mrs. Flora Hitch said she was employed by Dr. William B. Marbury as nurse-secretary. She identified his signature.

Mr. Kelleher:—I will only read a part of it. Exhibit 295-A is the questionnaire which the witness has testified bears the signature of Dr. William B. Marbury who, as the evidence shows, was a member of the Hospital Committee of the District Medical Society representing Emergency Hospital.

"1. What communication has your hospital had from Group Health Association, Inc.?

"There has been some communication, the exact nature of which is not known.

"2. What reply has your hospital made to Group Health Association, Inc.?

"In effect that patients would be accepted, but could only be treated by doctors on staff, and courtesy lists.

"3. Which, if any of the following Doctors are now members of your Medical Staff in any capacity or have privileges to practice in your hospital?"

Mr. Kelleher:—There is a checkmark opposite the name of Dr. Allen E. Lee.

"4. Is your hospital in sympathy with the policies of the Medical Soc. of D. C.?

"Yes.

"5. Is the entire Medical Staff of your hospital reappointed annually?

"Yes.

"6. Are appointments to The Medical Staff of your hospital approved by The Medical Staff?

"Yes.

"7. What governing body of your hospital finally makes appointments to The Medical Staff?

"The Executive Staff.

"8. Does your hospital require membership in the Medical Society of D. C. as a qualification for appointments to its Medical Staff?

"Yes.

"9. What percentage of the entire Medical Staff of your hospital are members of the Medical Society of D. C.?

"Supposedly 100 per cent. Not checked.

"10. Does your hospital require membership in the A. M. A. as a qualification for appointment to its Medical Staff?

"Yes.

"11. What percentage of the entire medical staff of your hospital are members of the A. M. A.?

"Supposedly 100 per cent. Not checked.

"12. Is your hospital a beneficiary of Community Chest Funds?

"Yes.

"13. Will you kindly make any other inquiry that you think might be pertinent at this time?

"William B. Marbury."

THE COURT:—What hospital is that?

Mr. Kelleher:—That is Emergency, your Honor.

TESTIMONY OF CAROLINE REECE EPPERLEY

DIRECT EXAMINATION

By Mr. Allen:

Caroline Reece Epperley was formerly Caroline Sinclair Reece. From Jan. 1, 1937, to Dec. 20, 1938, she was Executive Assistant to the President, Dr. Louis H. Taylor of Sibley Memorial Hospital.

She identified letters, minutes, roster of the staff, etc.

TESTIMONY OF BEULAH C. MUMFORD

DIRECT EXAMINATION

Mrs. Beulah C. Mumford said she was admitting nurse at Sibley Memorial from Jan. 1, 1937 to Dec. 30, 1938.

Q.—And as admitting nurse, what were your duties?

A.—To make all reservations for incoming patients from doctors as they called in, and assign the room; schedule operations; write preoperative orders, and admit the patients.

Q.—As part of your duties, if some physician called up that didn't have privileges, it was your duty to determine whether to admit him from instructions previously had by you from Dr. Taylor?

A.—Yes.

Q.—I show you a Government Exhibit, No. 496, and ask you to tell the jury what that document is.

A.—Well, that is a little memorandum for our own personal use, which we kept just as a reminder.

Q.—Did you write that?

A.—I did.

Q.—And you did it to conform with instructions given to you by—

Mr. Leahy:—Objected to; you are leading the witness.

By Mr. Allen:

Q.—How did you come to write this?

A.—Well, there were so many different people relieving in our office and we were told verbally that these particular people should not have reservations if calling, and the memorandum was written so that anyone coming in would be able to find it, because it is very hard to carry everything in your head. That is why I say it was a personal memorandum.

Q.—At whose instructions was it made?

A.—No one.

Q.—At whose instructions were you told to admit these persons?

Mr. Leahy:—She said no one told her.

Mr. Lewin:—She said some one told her not to let these people in.

THE COURT:—Who told you that?

The Witness:—The president of the hospital.

Mr. Allen:—That is all.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Mrs. Mumford, you have seen this before?

A.—Yes.

Q.—Is that all in your handwriting?

A.—No, sir; the signatures are not in my handwriting.

Q.—Would you tell us what part of that you refer to as containing the signatures?

A.—It is my handwriting down to here (indicating).

Q.—Down to the—

A.—Signature.

Q.—And whose signatures are those?

Q.—And were those people in the hospital at the time, Mrs. Mumford?

A.—Yes.

Q.—Did you pass this around to them for their signatures?

A.—We kept it in our office and asked them to read and sign it.

Q.—When you say "we," you mean those of you in the office?

A.—Yes.

Q.—And you wrote this up as your own personal memorandum?

A.—Yes.

Q.—And this language is your language?

A.—Yes.

Q.—Do you recall the date you wrote this?

A.—No, sir.

RE-DIRECT EXAMINATION

By Mr. Allen:

Q.—Who were these members and what were their duties?

A.—They were staff members and they do relieving in the admitting office at times.

Q.—Do similar work as you?

A.—Yes, sir.

(Counsel for both sides approached the bench.)

Exhibit 482, gives the names of the Advisory Committee of the medical staff as of Jan. 1, 1936. They are:

"Dr. H. C. Macatee chairman, Dr. J. W. Lindsay secretary, Dr. B. F. Weems, Dr. H. H. Kerr, Dr. F. J. Eisenman superintendent."

THE COURT:—I don't think you mentioned the hospital.

Mr. Lewin:—Garfield Memorial, and "the same Committee" with the exception of the Secretary—Dr. F. X. McGovern elected Secretary in place of Dr. Lindsay:

"On Jan. 1, 1938, Dr. H. C. Macatee chairman, Dr. F. X. McGovern secretary, Dr. A. B. Bennett, Dr. T. E. Neill, Dr. L. C. Ecker, Dr. R. L. Silvester, Dr. F. J. Eisenman superintendent.

"In October 1938 Dr. R. L. Silvester was elected as secretary of the Advisory Committee in place of Dr. McGovern."

Mr. Lewin:—Exhibit 483 is a carbon copy of a letter dated Nov. 15, 1937, from Francis J. Eisenman, Superintendent to Dr. Raymond E. Selders, 1328 Eye Street, Northwest, Washington, D. C.:

U. S. EXHIBIT 483

"My dear Dr. Selders:

"Acknowledge receipt of a request for Surgical Privileges at Garfield Memorial Hospital. Your application has been referred to the Advisory Committee for action at their next meeting.

"You, no doubt, are cognizant with the routine procedure for courtesy privileges in all Class A hospitals. We have required for the past twelve years or more that all such requests be referred to the Medical Advisory Committee of the Board of Directors for recommendation.

"This Committee is expected to meet on or about Nov. 29, 1937.

"Sincerely yours,

"Francis J. Eisenman, M.D.,
"Superintendent."

Mr. Lewin:—Exhibit 500 is the letter which the evidence shows was sent by Dr. Conklin to all the local private hospitals in Washington, and Exhibit 500 is the one to the Garfield Memorial Hospital, enclosing the so-called white list.

Exhibit 498 is another letter from Dr. Conklin to the Chief of Staff, Garfield Memorial Hospital, dated Dec. 2, 1937:

U. S. EXHIBIT 498

"Dear Doctor:

"Pursuant to formal action of the Medical Society of the District of Columbia, in session on the evening of Dec. 1, 1937, the attached resolution is sent you.

"Very truly yours,

"C. B. Conklin, M.D.,
"Secretary."

Mr. Lewin:—Enclosed is the resolution.

"THE MEDICAL SOCIETY OF THE DISTRICT OF COLUMBIA

1718 M Street
Washington

"Resolution adopted by the Society, in session on the evening of Dec. 1, 1937:

"Resolved, That as a matter of educational policy the Medical Society of the District of Columbia strongly recommends that all hospitals engaged in the teaching and training of residents, interns, and nurses, where possible, follow the recommendation of the American Medical Association regarding the constitution of their entire Medical Staffs, namely, that each appointee be a member of the Medical Society of the District of Columbia or a local medical society in this immediate neighborhood and a member of the American Medical Association."

Mr. Lewin:—Exhibit 486 is the minutes of the Advisory Committee, Medical Staff, Garfield Memorial Hospital, held Dec. 6, 1937, with the typewritten signature of the secretary, F. X. McGovern, M.D. From those minutes I read:

U. S. EXHIBIT 486

"The Secretary was requested to reply to the Medical Society of the District of Columbia in regard to a Resolution passed by the Medical Society on Dec. 1, 1937."

Mr. Lewin:—The next is this reply of Dr. McGovern; it is Exhibit 484. It is signed by Dr. McGovern as Secretary, Advisory Committee, Garfield Memorial Hospital, and addressed to Dr. C. B. Conklin, Secretary, Medical Society of the District of Columbia.

U. S. EXHIBIT 484

"Dear Dr. Conklin:

"In reply to your letter of Dec. 2, 1937, enclosing the resolution of the Medical Society adopted Dec. 1, 1937, I have been requested to advise you that the present policy in force at Garfield Hospital is in conformity with the provisions of the above-mentioned resolution.

"Respectfully yours,

"F. N. McGovern,

"Secretary, Advisory Committee."

Mr. Lewin:—The next exhibit from Garfield which I would like to read is 485, and is a memorandum from Francis J. Eisenman, M.D., Superintendent, Garfield Memorial Hospital, to Surgical Service, Garfield Memorial Hospital, dated Dec. 3, 1937:

U. S. EXHIBIT 485

"Gentlemen:

"Refer for your consideration the application of Dr. Raymond E. Selders for Surgical Privileges. This is not a 'Run of Mine' case, and your action may be far reaching. Information shows him to have sufficient training for personal recognition, when compared with many now approved for courtesy privileges at Garfield Memorial Hospital. He is a member in good standing in A. M. A., County and State Medical Societies in Texas, and was returning from Massachusetts to Texas when offered the position with H. O. L. C.

"Should your recommendation be adverse, for other than personal qualifications, request they be stated, in order that the Board of Directors might have the benefit of your advice and counsel.

"Three applications sent the Academy of Surgeons, (two of which were returned the second time) on Sept. 24, 1937. They approved of Dr. DeBayle, made no comment on Dr. Carbo, and did not even return the papers on Dr. Taggart, both of whom are practicing here, awaiting action on their application.

"Application of Dr. Wm. Hollister for Jr. Associate in Surgery. No vacancy.

"Yours very truly,

"Francis J. Eisenman, M.D.,

"Superintendent."

Mr. Lewin:—Now, here comes the letter from Dr. McGovern, Secretary, Advisory Committee, Medical Staff, Garfield Memorial Hospital, addressed to Mr. C. A. Aspinwall, President, Board of Directors, Garfield Memorial Hospital. It is dated Dec. 17, 1937:

U. S. EXHIBIT 499

"My dear Mr. Aspinwall:

The following is recommendation of the Advisory Committee of the Medical Staff to the Board of Directors of Garfield Memorial Hospital:

"That pending the settlement of the question raised as to the ethical status of Group Health Association, Inc., and pending further study of the professional qualifications of Dr. Raymond E. Selders, that he be not granted Courtesy Privileges at Garfield Memorial Hospital, except of course in a real emergency."

"The reason prompting this recommendation is the fact that Group Health Association, Inc., a lay corporation, is considered unethical by the Medical Society of the District of Columbia, and its legality is being questioned. Dr. Selders has been hired by Group Health Association as its surgeon. It is the opinion of the Advisory Committee that if Garfield Hospital allows Dr. Selders courtesy privileges that it would be placed in the light of aiding and abetting Group Health Association, Inc.

"Yours very truly,

"F. N. McGovern, M.D.,

"Secretary, Advisory Committee, Medical Staff."

Mr. Lewin:—And the next I will read is Exhibit 487, a report which the Superintendent, Francis J. Eisenman, made to Mr. C. A. Aspinwall, on March 28, 1938. It reads:

U. S. EXHIBIT 487

"My dear Mr. Aspinwall:

"I went over the Minutes of the Executive Committee and Board of Directors for the past nine months and find the following:

"In February 10 Executive Committee meeting a letter from Mr. Kirkpatrick re Dr. Selders privileges was read. No action.

"Dec. 28, 1937, Executive Committee. The Committee considered the Resolution of the Medical Staff on application of Dr. Selders as follows:

"That pending the settlement of the question as to the ethical status of Group Health Association, Inc., and pending further study of the professional qualifications of Dr. Raymond E. Selders, that he be not granted Courtesy Privileges at Garfield Memorial Hospital, except, of course, in a real emergency."

Discussed, accepted, and referred to the Board of Directors, recommending approval.

"Meeting of the Board of Directors of March 22, 1938, the President in reviewing the proceedings stated our official connection with Group Health Association was the application of Dr. Selders for surgical privileges, the temporary privileges extended him awaiting action on the application, and the withdrawal of these privileges on recommendation of the Medical Staff. (As noted in Resolution Executive Committee meeting of Dec. 28, 1937), awaiting legality of Group Health Association. The actual disqualification of Dr. Selders application was by the Board of Directors at meeting on Jan. 25, 1938, in which the Minutes of the Executive Committee meeting of Dec. 28, 1937, were read.

"In approving these Minutes, the Board desired to state that in denying the privileges of the Courtesy Staff of the Hospital to Dr. Raymond E. Selders on the recommendation of the Medical Staff of the Hospital, the action was pending the legality of the Organization who employed Dr. Selders."

"Yours very truly,

"FRANCIS J. EISENMAN, M.D.,
Superintendent."

TESTIMONY OF CLAUDE C. CAYLOR

DIRECT EXAMINATION

By Mr. Allen:

Claude C. Caylor was Secretary, Providence Hospital. He identified the roster, minutes and correspondence.

Mr. Leahy:—I will now read Exhibit 501. It is on the stationery of the X-Ray Department, Providence Hospital, Washington, D. C. There is a hand-written notation in the right hand corner "Copy of letter sent by me to non-members of the D. C. Medical Society," signed "C. C. Caylor."

The letter reads:

"As a result of the recent inspection of Providence Hospital by the Council on Medical Education and Hospitals of the American Medical Association, we have been reminded that several of our Staff members are not members of the American Medical Association or any of its constituent societies. This is one of the requirements to be met in order to be acceptable for approval for intern training, and at a recent meeting of the Executive Staff it was voted to request all members of the Staff to cooperate in meeting this requirement.

"The Staff has instructed me to inquire if you will not cooperate with it in meeting this requirement?

"If you are now a member of the American Medical Association or any of its constituent societies, please let me have that information.

"Yours very truly,"

Mr. Allen:—Now I will read Exhibit 502:

"U. S. EXHIBIT 502.

"MINUTES OF THE EXECUTIVE STAFF

"Nov. 18, 1937.

"The meeting was called to order by the President Dr. Mundell, with Sisters Rosa and Gertrude, and Drs. Fadelley, Putzki, Cahill, Duchring, Sanderson, O'Donnell, Moody, Hess, Leibell, Caylor, Higgins and Argy present.

"The minutes of the October meeting were read and approved.

"The report of the intern committee was approved."

Mr. Allen:—I am going to omit the next paragraphs of the minutes, which deal with other matters, and go down to the last paragraph:

"Correspondence between the Group Hospital Association and the Hospital was read relative to the admission of beneficiaries of the Association to the hospital, and the care of such patients. It was brought out that such patients would be admitted in accordance with the regulations of the hospital, and that physicians in the employ of the Association should first obtain hospital privileges in the usual manner before they could attend such patients.

"The meeting then adjourned.

"C. C. Caylor,
Sec."

Mr. Allen:—I now read Exhibit 503, dated Feb. 17, 1938. It is from Dr. Caylor to Dr. Raymond E. Selders.

"U. S. EXHIBIT 503

"Dear Dr. Selders:

"I regret to inform you that your application for privileges to practice in Providence Hospital has been disapproved by the Staff.

"Yours truly,

"Claude C. Caylor, M.D.,
Secretary."

Mr. Allen:—Exhibit 504 is the Regular Staff for 1938, which I won't read at this time.

Government's Exhibit 506 is a letter from Dr. Conklin to the Chief of Staff, Providence Hospital, dated Dec. 2, 1937, and encloses the December 1st resolution, which has been read several times and which Mr. Lewin read just a few minutes ago.

TESTIMONY OF MARIAN DANIEL GODBOLD

DIRECT EXAMINATION

By Mr. Kelleher:

Mrs. Godbold was employed with the Columbia Hospital for Women during the years 1937 and 1938 as Secretary to the Superintendent of the Hospital, Colonel Ashburn.

She identified minutes and correspondence.

FEBRUARY 27—AFTER RECESS

(Counsel for the defendants presented a formal objection to the admission of evidence concerning the hospitals.)

TESTIMONY OF DR. FRED O. COE

DIRECT EXAMINATION

By Mr. Timberlake:

Fred O. Coe was a member of the Executive Staff of Georgetown Hospital during 1937 and 1938. He identified Dr. Dardinski's signature.

Dr. Dardinski was charged with taking the minutes of meetings of the executive staff.

TESTIMONY OF MATTIE M. GIBSON

DIRECT EXAMINATION

By Mr. Allen:

Mattie M. Gibson was superintendent of the Children's Hospital from Jan. 1, 1937, to Dec. 20, 1938. She identified minutes of the board of directors, minutes of the medical staff, the roster of the staff and correspondence with Drs. Conklin and Scandiffio.

Mr. Lewin:—I should like now to read to the jury from the correspondence pertaining to Sibley Memorial Hospital.

Exhibit 492 is a list of the medical staff of Sibley Hospital for 1937, and Exhibit 477 is a list of the medical staff for 1938, and I will not read them.

No. 494 is an old friend, which I will not read again. It is a letter from the District Medical Society, from Dr. Conklin, this time, to the Sibley Hospital, dated July 29, 1937, and its enclosure is the White List of approved persons which omits the name of Group Health Association, Inc.

Mr. Leahy:—You might omit calling it the White List. You objected so strenuously to the term "check-off."

Mr. Lewin:—You just want a little tit for tat. All right.

I will read to the jury the response from Dr. Lewis H. Taylor, president of Sibley Memorial Hospital, to that letter enclosing the approved list. It is Exhibit 493, dated Aug. 26, 1937, addressed to the Medical Society of the District of Columbia, Dr. Coursen B. Conklin, Secretary:

"I wish to acknowledge receipt of your communication of July 29, 1937, relative to the action of the Executive Committee of the Medical Society of the District of Columbia on July 12, 1937 in fulfillment of Chapter IX, Article IV, Section 5 of the Constitution.

"I have had this communication placed in the appropriate file of the Hospital and its provisions will be carried out by this institution.

"Very sincerely yours,

"Lewis H. Taylor, M.D.

"President."

The next one is an old friend. You don't mind my calling it that, do you, Mr. Leahy? It is Exhibit 495 and it is also a letter from Dr. Conklin, Secretary of the District Medical Society, to the Chief of Staff of Sibley Memorial Hospital, dated Dec. 2, 1937, and it encloses a resolution of the Society adopted on the evening of Dec. 1, 1937.

Here is the response of the president of Sibley Memorial Hospital to that communication. It is Exhibit 490, dated Dec. 6, 1937, and addressed to Dr. C. B. Conklin, Secretary, The Medical Society of the District of Columbia, and it reads as follows:

"My dear Doctor Conklin:

"I wish to acknowledge receipt of your letter of Dec. 2, 1937 referring to the action of the Medical Society on Dec. 1, 1937 and also the inclosed resolution. My impression is that membership in the Medical Council of this institution is already on the basis suggested in the resolution. There are no changes in the Council's personnel in contemplation at present, but should such contingency arise, you will know that proper regard will be paid to the wishes expressed in the aforementioned resolution.

"With kind personal regards to you, I am

"Very sincerely yours,

"Lewis H. Taylor, M.D.

"President."

Before continuing reading the documents of the Sibley Memorial Hospital I would like to turn to the minutes of the Executive Committee of the defendant District Medical Society for April 11, 1938, and I will read from page 3. I had better tell you who was present. The defendant Dr. William Mercer Sprigg presided, and there were present Drs. Borden, Chipman, Claud, Fowler, Holden, Hooe, Gill, McGovern, Murphy, Neill, Reed—John A. Reed and E. Hiram Reede—Lomax Wells and C. B. Conklin.

On page 3, after a lot of colloquy, I read the following:

"At this point Dr. F. X. McGovern asked to be heard. He stated that he had, he believed, the proper interests of the Medical profession at heart. He was of the opinion that frequent press releases would be playing into the hands of the Group Health Association. Furthermore, he had attended a luncheon at which Dr. William C. Woodward and Dr. Wright were present, and that Dr. McGovern's action relative to the press had been commended. It was apparent to Dr. McGovern that the Group Health Association, as such, was licked and that it was a very small affair com-

pared with the much larger, national in scope, movement that was now under way. He did believe that for these reasons certain proposals by Mr. Fulton Lewis Jr. were made without sufficient knowledge of the full implications."

Then, turning to page 6:

"Dr. McGovern was recognized and said it was plain that the questions that Dr. Hooe had propounded to Mr. Lewis came from Mr. Lewis and that he wanted to make it plain that he believed the Group Health Association was now nothing but a bubble. He cited what he succeeded in getting in the press personally, ending by saying that since The Post printed an editorial inspired by him (Dr. McGovern) Mr. Kirkpatrick hasn't opened his mouth. He resented strongly his being on trial, which it was very plain that he was.

"Dr. Hooe was recognized. He stated that he had not made any plea for Mr. Fulton Lewis' services tonight—just presenting facts. He added that he had another very important matter to bring before the committee—that was relative to the hospitals. He thought that a meeting should be arranged in the Medical Society Building, to which would be invited the official representatives of the various hospitals. He stated that the hospitals had been cooperative. He thought that the Society should get the representatives all together with view to expressing appreciation and standardizing action against the Group Health Association group physicians.

"Dr. Hooe would make a motion that the Chairman of the Executive Committee be authorized and directed to appoint a committee, consisting of many members, including such doctors as Drs. A. C. Christie, F. X. McGovern, W. M. Sprigg, Sterling Ruffin and others, to perfect arrangements and conduct the meeting.

"The secretary offered an amendment to the effect that the Compensation, Contract and Industrial Medicine Committee, with certain supplementary additions, operate the meeting. Dr. Hooe thought his original plan was to be preferred.

"The motion as originally made was seconded and adopted."

The minutes are signed by the defendant C. B. Conklin, Secretary.

I should like to read, also, from the minutes of the Annual Stated Meeting of the Medical Society of the District of Columbia held Wednesday, May 11, 1938, at 8 p. m.:

"Dr. Thomas E. Neill, president, presiding.

"Present: Drs. Vaughan, Prentiss, Trinder, Elward, Fong, Talbot, Reede, Alfaro, Thompson, Gwynn, Rench, Thomas, Barry, Mallory, Leonard, Foye, Arnold, King, Fowler, Christie, Clark, and other members to the number of about 460.

"The minutes of the preceding meetings held April 27 and May 4 were read and approved."

Now I should like to turn to page 14:

"Dr. R. Arthur Hooe was recognized. He made a motion to the effect that the Medical Society of the District of Columbia go on record as forbidding its members to receive monies or checks for services rendered to beneficiaries of Group Health Association, Inc., or its agencies and so notify the membership of the Medical Society.

"Dr. Hooe was confident that the Legal Department of the American Medical Association would render an opinion consistent with the motion. He said he had conferred with counsel for the Society and upon request read a communication that had been addressed to the Secretary, as follows:

"May 10, 1938.

"Dr. C. B. Conklin, Secretary,
Medical Society, D. C.
1718 M St. N.W., Washington, D. C.

"Dear Dr. Conklin:

"Mr. George F. Hoover tells me that he has received from Dr. Hooe a request for information which it is understood is desired by the Medical Society, namely, as to whether members of the Society should accept payment for services rendered members of Group Health Association.

"Mr. Hoover, Mr. Leahy and I have considered the subject and it is our advice that members of the Medical Society should not accept any payments whatsoever from Group Health Association and should issue no receipts in favor of said Association; and that with respect to treatment rendered patients who happen to be members of Group Health Association, the physician who renders the treatment can accept payments made directly by the patients.

"Very truly yours,

"F. A. Fenning."

"Dr. C. B. Conklin made a motion that this matter be referred to the Executive Committee for consideration and report. No second to this motion.

"Dr. W. Raymond Thomas made a motion that the matter be laid on the table. Seconded and not adopted.

"Dr. Hooe restated his motion to the effect that the Medical Society of the District of Columbia go on record as forbidding its members to receive monies or checks for services rendered to beneficiaries of Group Health Association, Inc., from or over the signature of Group Health Association, Inc., or its agencies and so notify the membership of the Medical Society. Seconded and finally adopted."

And the minutes are signed by C. B. Conklin, Secretary.

I will resume the reading of the Sibley Memorial Hospital correspondence.

Government Exhibit 417 is a letter from Dr. Lewis H. Taylor, president of Sibley Memorial Hospital, to Mr. William C.

Kirkpatrick, President, Group Health Association, dated Feb. 5, 1938, which reads as follows:

"My Dear Mr. Kirkpatrick:

"I am returning you herewith a check of the Group Health Association for \$66.80 on which there is a notation 'hospitalization for Miss Tommie Lee Nix.' This check was evidently sent to us by mistake. As you are aware from correspondence between your predecessor, Mr. William F. Penniman, and myself, as President of Sibley Memorial Hospital, the application of Group Health Association to this institution for the admission of its members is still under advisement. The Board of Directors of this institution have arrived at no conclusion in the matter and pending their decision, of course, none of your Group, as such, are eligible for hospital privileges here.

"For your information, I may state that Miss Tommie Lee Nix on Dec. 24, 1937 was admitted to this hospital on the service of Dr. Rush Conklin. Later, she was transferred to the service of Dr. A. B. Little and was then operated on by Dr. Oliver Cox. On her admission card, responsibility for her bill is assumed by and over the signature of James R. Nix, 2900 Seventeenth St. N.E., and we look to this gentleman or the patient, Miss Tommie Lee Nix, for the settlement of her account.

"Very sincerely yours,

"Lewis H. Taylor, M.D., President."

The next is Government Exhibit 491, and it is a memorandum to Admission Office, Accounting Department, from Lewis H. Taylor, president of Sibley Memorial Hospital, dated Feb. 8, 1938:

"Please use every precaution to see that no patient is admitted as a member of the Group Health Association, Inc., of the Home Owners' Loan Corporation. Also, that all checks in payment of service rendered patients be scrutinized closely to see that they are not made out by this organization. The reason for this memorandum is that Group Health Association, Inc., has applied for the privilege of having their members admitted to this hospital and that their application is still pending and has not been acted on by the Local Board of Directors.

"Lewis H. Taylor, M.D., President."

Exhibit 496 is a handwriting memorandum which was identified by the witness Mumford on the stand this morning. In handwriting it says:

"Group Health Association, H. O. L. C.

"Dr. Henry Brown, Director,

"Dr. Raymond Selders, Surgeon

"Dr. Allen Lee

"Dr. Edmund Wells

"Dr. Stephen Hulburt

"Dr. M. Scandiffio.

"These doctors are not to be allowed in at any time.

"L. Welch

"Beulah Mumford

"H. R. Dutton

"D. A. Wood

"J. Jenney

"M. M. Realine."

The next is Government Exhibit 418, which is Mr. Kirkpatrick's reply to Dr. Taylor in regard to the Nix check, dated Feb. 18, 1938:

"My Dear Dr. Taylor:

"I am in receipt of your letter of Feb. 5, 1938 with which you return a check issued by Group Health Association, Inc., bearing number 247, in the amount of \$66.80, to the order of Sibley Memorial Hospital. This check is in payment of a bill dated Jan. 5, 1938 rendered by your hospital for services rendered to Miss Tommie Lee Nix, a member of this Association, while confined in your hospital from December 24 to December 31, 1937.

"In your letter you state that the check was evidently sent to you in error and refer to the fact that on the stub of the check there is a notation which reads 'hospitalization for Miss Tommie Lee Nix.' We wish to advise there was no mistake on our part in transmitting the check in question. Under provisions of the by-laws of Group Health Association, Inc., Miss Nix is entitled to have provided to her hospitalization when such is necessary. Miss Nix having received hospitalization in your institution for the dates mentioned is therefore entitled to have the cost of that hospitalization paid for by Group Health Association, Inc. Your attention is invited to the fact that the stub which contains the notation referred to is not in any sense a part of the body of the check. The stub is provided only for information of the payee as to what the check is intended to cover. In depositing the check, if you so choose, the stub of course may be detached before the check is deposited. We are, therefore, returning the check herewith and ask that it be deposited in the usual course.

"In the first paragraph of your letter you state that application of this Association to admit its members to your hospital is yet under advisement by your Board of Directors and that until a conclusion is reached members of Group Health Association, Inc., are not entitled to receive the privileges of your hospital. I gather from your letter that because patients may be members of Group Health Association, Inc., they are by that fact not entitled to be treated at Sibley Memorial Hospital until such time as your Board has approved their admission as such members. It is difficult for us to appreciate this conclusion. We understand that hospitals in the District of Columbia are maintained for the service of members of the community and that those comprising the community may enjoy the privileges of treatment at those hospitals when necessary and that membership in Group Health Association, Inc., could hardly be regarded as a reason for denying such persons admission to your hospital when such is necessary. I do not believe that the ston to your hospital when such is necessary. I do not believe that the Methodist Episcopal Church, which we understand is the owner of Sibley Memorial Hospital, would approve such a policy.

"We can well understand that admission to your courtesy staff of any member of the staff of physicians of Group Health Association, Inc., is entirely within the discretion of the authorities of your hospital and that you have every right to insist that any physician or surgeon admitted to courtesy privileges in your hospital should first establish beyond all doubt the fact that he is in every respect qualified for admission to the courtesy staff. We cannot, however, comprehend that citizens of the District of Columbia when in need of treatment at your hospital should be denied that privilege merely because they are members of this Association.

"Very sincerely yours,

"W. C. Kirkpatrick, President."

To which the president of Sibley Memorial Hospital makes response by letter dated Feb. 21, 1938, Exhibit 419, as follows:

"My dear Mr. Kirkpatrick:

"I wish to acknowledge receipt of your letter of Feb. 18, 1938 addressed to me as President of Sibley Memorial Hospital and returning to me a check, numbered 247, issued by the Group Health Association, Inc., in the amount of \$66.80, said check made to the order of Sibley Memorial Hospital and dated Jan. 17, 1938; the purpose of this check as indicated on its stub, 'Hospitalization for Miss Tommie Lee Nix.'

"Miss Tommie Lee Nix was admitted to the Hospital on the service of Dr. Rush Conklin on Dec. 24, 1937. Miss Nix signed her own card of admission on which appears the name of her brother, James R. Nix, 2900 17th Street, N.E., who assumed responsibility for the payment of her bill while in this institution. On her admission card appears no reference whatsoever to the Group Health Association, Inc. It should be apparent that pending the decision of the Local Board of Directors of Sibley Memorial Hospital, who are considering the request of your Association, the institution would not receive your members as such. This Hospital is open to citizens of the District of Columbia and the surrounding country and has been since its foundation over forty years ago. The fact that an individual is a member of any organization, yours or otherwise, has nothing to do with entry to Sibley Hospital. I am therefore, returning your check, 247. We confidently expect and know that Miss Nix or her brother who signed responsibility for her bill, will settle this account.

"Very sincerely yours,

"Lewis H. Taylor, M. D., President."

The next is Government Exhibit 420. It is on the letterhead of Group Health Association, Inc., and comes from R. T. Berry, Secretary-Treasurer, Group Health Association, Inc., addressed to Dr. Lewis H. Taylor, M.D., President, Sibley Memorial Hospital, dated March 30, 1938:

"Dear Dr. Taylor:

"We have again received our check 247 in the sum of \$66.80, drawn to your order for hospitalization incurred by Miss Tommie Lee Nix.

"We regret that you seem to be unable to accept payment for an apparent just debt. We wish to inform you that the expense so incurred by Miss Nix is payable by this association and any delinquency in payment as may appear on your records is due entirely to the fact that this check has not been accepted and we wish you to understand that the credit standing of Miss Nix in the District of Columbia or elsewhere is not to be affected in any way, pending your decision as to whether or not you will definitely decline or accept this check.

"When you wish payment, kindly notify this office and we will again forward you the check to clear your records.

"Very truly yours

"R. T. Berry, Sec'y.-Treas.,
Group Health Association, Inc."

That was in March. Next we see in June Government Exhibit 421 from Lewis H. Taylor, M.D., President of Sibley Memorial Hospital, to W. C. Kirkpatrick, President of Group Health Association, Inc.:

"June 20, 1938.

"My dear Mr. Kirkpatrick:

"I am returning to you herewith, a check of the Group Health Association, numbered 931, in the amount of \$31.00, on which there is a notation 'for board, drugs, and laboratory service, Miss Taylor Owen.'

"Miss Taylor Owen was admitted to Sibley Hospital on May 23, 1938, on the service of her physician, Dr. A. McNitt. On her admission record, responsibility for her account was assumed by her sister, Miss Moss Owen.

"Similar action was taken in the case of Miss Tommie Lee Nix and the reasons therefore were plainly stated in correspondence between you and myself and may be found in my letters to you.

"The Local Board of Directors have arrived at no decision in the matter of the application of Group Health Association for certain privileges in Sibley Memorial Hospital. I will communicate to you promptly any action which they may take in the matter.

"Very sincerely yours,

"Lewis H. Taylor, M. D., President."

Here comes Mr. Kirkpatrick's response, Government Exhibit 422, dated Aug. 5, 1938, addressed to Dr. Lewis H. Taylor, President, Sibley Memorial Hospital:

"Dear Dr. Taylor:

"This will acknowledge receipt of your letter of June 20, 1938 with which you return our check 931 in the amount of \$31.00 for Board, Drugs and Laboratory Service to Miss Taylor Owen, a member of

Group Health Association, Inc. The check in question is returned herewith together with a request signed by Miss Owen that you accept the check as tendered.

"Very truly yours,
"W. C. Kirkpatrick, President."

The enclosure is the communication referred to of Aug. 5, 1938, to Sibley Memorial Hospital, reading as follows:

"Dear Sirs:

"This is to advise you that Group Health Association, Inc. has been by me requested to make payment to you of the indebtedness due you of \$31.00 arising out of your recent services to Miss Taylor Owen.

"If for any reason you do not accept the tendered payment, you will kindly advise Group Health Association, Inc., the basis of your refusal as I expect to leave settlement of this indebtedness entirely with the Association, and have given it full authority to act for me in the premises."

To which the president of Sibley Memorial Hospital, on Aug. 12, 1938, makes response, Government Exhibit No. 423, as follows:

"Miss Taylor Owen,
2019 Eye Street, N.W.
Washington, D. C.

"My dear Miss Owen:

"Receipt is acknowledged of your letter of Aug. 5, 1938, enclosing check of Group Health Association No. 931, in the amount of \$31, payable to the order of Sibley Memorial Hospital. Said check is returned to you herewith.

"It is requested that you pay the amount of your indebtedness to this hospital in cash.

"Yours very truly,
"Lewis H. Taylor, M.D., President."

Government Exhibit No. 424 is Mr. Kirkpatrick's letter dated Aug. 26, 1938:

"Dear Mr. Taylor:

"This will refer to your letter of Aug. 12, 1938, addressed to Miss Taylor Owen, 2019 Eye Street, N.W., Washington, D. C., which letter has been referred to the writer for attention by Miss Owen.

"Miss Owen has previously notified you that this Association is acting in her behalf with respect to the hospital bill amounting to \$31.00 due you.

"You will find enclosed our check No. 931, which was previously forwarded to you and which was returned with your letter to Miss Owen, now duly certified by the Riggs National Bank.

"If for any reason you do not see fit to accept this certified check, advice as to the basis of your refusing to do so will be appreciated.

"You can readily understand the considerable trouble which would be involved in making a formal legal tender in cash to you of the amount in question. I feel certain that your attitude will not be such as to require us to resort to this extremity.

"Very truly yours,
"W. C. Kirkpatrick, President."

To which the president of Sibley Memorial Hospital, Dr. Lewis H. Taylor, on Aug. 30, 1938, makes response, Government Exhibit 425, as follows:

"Dear Miss Owen:

"Receipt is acknowledged of a letter of Group Health Association dated Aug. 26, 1938, with the enclosure being a certified check in the amount of \$31.00 therein referred to. Said letter purports to have been sent in your behalf.

"The check is returned to you herewith, with the request, as previously made in our letter addressed to you under date of Aug. 12, 1938, that you pay the amount of your indebtedness to this Hospital in cash.

"Yours very truly,
"Lewis H. Taylor, M.D., President."

Government Exhibit 426 is a somewhat similar letter from the same Dr. Lewis H. Taylor, president of Sibley Memorial Hospital, this time to Mr. Howard F. Vickery, another member of Group Health Association, in regard to refusing payment of Group Health Association's check for his account. It is dated Aug. 2, 1938. I will not bother to read that, nor will I read at this time Government Exhibit 427, which is Mr. Kirkpatrick's letter in regard to the Howard Vickery case, which enclosed the authorization of Mr. Vickery to the Sibley Memorial Hospital to accept check. Nor will I read the letter dated Aug. 12, 1938, in regard to a similar matter. Nor will I read Government Exhibit 429, which is Mr. Kirkpatrick's letter to Sibley Memorial Hospital dated Aug. 13, 1938. Perhaps I should give you the last word in this series. I do not think it is necessary to read it, however. It is exactly like one of the others that I read. This is as late as Aug. 30, 1938. It is Exhibit 430, Dr. Taylor's letter to Howard Vickery, finally refusing a certain check and demanding cash.

Mr. Kelleher:—I wish now to read the documents which were introduced through the witness from Columbia Hospital.

Exhibit 507 is the minutes of a meeting of the Executive Committee of Columbia Hospital, dated Dec. 2, 1937:

"(b) the Hospital Committee of the Medical Society of the District of Columbia has recommended to the Society that all members of the staffs of all hospitals in the District be asked to join the Medical Society of the District or the American Medical Association, but the District Medical Society has not yet acted upon the recommendation."

Then, turning to page 2 of the minutes, I read the following, which is still part of the Superintendent's report:

"The Superintendent reported correspondence with the Group Health Association within the Home Owner's Loan Corporation, indicating, on the part of the Association, a desire to have its members accepted for hospitalization at customary rates, and that Dr. Selders, one of its employees, be allowed to treat such members when hospitalized here. The Superintendent had replied that the hospital would doubtless be willing to accept members of the Association at the customary rates, but that no physician could practice here until appointed to either the regular or courtesy staff by the Board of Directors. Following this, Dr. Selders made application in Classes 1, 2 and 3, which application is now under consideration by a committee appointed within the Medical Board, because the application did not show the special training and large experience in Obstetrics and Gynecology which are usually demanded of applicants for privileges in Classes 1 and 2.

"The Superintendent further reported a visit from Mr. Penniman of the Home Owner's Loan Corp., who explained the objective of the cooperative society and expressed a desire to work in the closest harmony with physicians and hospitals, stated that the cooperative society expects to pay but \$4 per day toward the hospital expenses of its members and that those members must themselves pay any additional charges. He asked that pending action upon Dr. Selders' application for privileges, temporary approval be granted him in case of emergency work or obstetrics. The Superintendent informed Mr. Penniman that privileges would be granted for cases of normal obstetrics pending the decision.

"Dr. Sprigg, a representative of the Medical Board, counseled delay in action upon both the requests made by the Group Health Association and Dr. Selders pending legal decision at present being sought in regard to the Association, and that meanwhile emergency cases requiring hospitalization be accepted as a measure of humanity. The Superintendent asked if the Committee had any instructions as to how he should proceed in case of request for admission of patients and was advised, upon motion of Mr. Blair, that action in such cases be left to his judgment. Mr. Lesh then stated that, if it were true, he thought that it should be made a matter of record that the Superintendent's action and the proposals now made meet with the approval of the Medical Staff and, upon assurance by Dr. Sprigg that such is the case, it was decided to make a record of the fact."

U. S. EXHIBIT 508

Mr. Kelleher:—Exhibit 508 is the minutes of the meeting of the Board of Directors held on Wednesday, Sept. 21, 1938, at 3:30 o'clock p. m. I will read the following paragraph:

"The Medical Board reported as follows on the applications for courtesy privileges:

"Dr. Raymond E. Selders, Classes 1 and 3, the Medical Board informs the Board of Directors that it considers it inadvisable to act at this time on the application of Dr. Selders."

Now I read paragraph D:

"The Superintendent reported 'Group Health has asked for the granting of privileges to its doctors. Captain Wells had informed them that action might be taken at this meeting. The action on Dr. Selders' application indicated above is the answer."

Mr. Leahy:—Will you not read what is above that?

Mr. Kelleher:—I have read it; I will read it again if you like. I have no desire to read the rest of the paragraph D, unless you want me to.

"The Medical Board reported that it considers it inadvisable to act at this time on the application of Dr. Selders."

Mr. Kelleher:—Exhibit 511 is the minutes of the Medical Board of Columbia Hospital, Dec. 9, 1938:

"U. S. EXHIBIT 511.

"The following applications for hospital privileges were considered, Dr. Clark P. Halstead, Class 3, postponed pending further information," and the minutes show that the applications of two other doctors were postponed at the same time. Unfortunately, I have read some of these minutes out of order. I would like to read the minutes of the Medical Board for Sept. 19, 1938:

"Dr. Sprigg moves to consider the application of Dr. Selders for privileges in Classes 1 and 3, and that he not be endorsed for the privileges. This was seconded by Dr. Mundell and discussed by Drs. Sprigg, Wilson, Sylvester, McNitt, Mundell and Copeland, after which, Dr. Wilson moved that the following be substituted for Dr. Sprigg's motion:

"That the Medical Board inform the Board of Directors that it considers it inadvisable to act at this time on the application of Dr. Wilson."

"This was seconded by Dr. Sylvester and was carried by five to two. Dr. Wilson then moved the adoption of his substitute. Dr. Sylvester seconded the motion and it was passed by a vote five to two."

Mr. Kelleher:—Exhibit 514 is the letter of the defendant Conklin dated July 19, 1937, to the Superintendent of the Hospital, enclosing the list of approved organizations.

Exhibit 515 is the letter from Dr. Conklin to the Chief of Staff of Columbia Hospital dated Dec. 2, 1937, and enclosing the resolution of the Medical Society adopted on Dec. 1, 1937.

Mr. Timberlake:—May it please the Court, I will now read from Government's Exhibit 440-A, a letter from Sister M. Rodriguez to C. B. Conklin, Secretary, The Medical Society of the District of Columbia, dated Dec. 7, 1937:

"U. S. EXHIBIT 440-A

"My dear Dr. Conklin:

"I am in receipt of the copy of the Resolution adopted by the Medical Society of the District of Columbia.

"It gives me pleasure to state that the Executive Staff of the Georgetown University Hospital, in session on Oct. 11, 1937, acting on the recommendation of the American Medical Association concerning the approval of Residencies and Internships ruled as follows:

"That all members to the Courtesy Staff shall be nominated and elected annually and that no physician shall be nominated or elected to any staff of the hospital unless he is a member of his local or County Medical Society and of the American Medical Association. Members who are already on the staffs, as well as those who are applying for privileges to practice in the hospital, shall be notified to qualify within the year.

"Thanking you for past courtesies, I am,

"Sincerely yours,

"SISTER MARY RODRIGUEZ,

"Superintendent."

Mr. Timberlake:—Government's Exhibit 516 is the minutes of the "Special Committee of the Executive Committee on Hospital Administration" held Jan. 20, 1938, in the staff room of the hospital, Father McCauley presiding.

"U. S. EXHIBIT 516

"SPECIAL MEETING OF THE EXECUTIVE COMMITTEE
ON HOSPITAL ADMINISTRATION

"Special meeting of the Executive Staff was held Jan. 20, 1938, at 4 p. m. in the staff room of the hospital, Father McCauley presiding.

"Those present were Drs. Coe, Martel, Whitmore, Vaughan, Koppanyi, Mollari, Cavanaugh, Cahill, Solnitzky, Milone, Mundell, Stanton, Duehring and Dardinski.

"Sister Rodriguez presented the case for consideration which concerned a patient admitted from the H. O. L. C. The question to be decided:

"1. Was the patient now (after 48 hours) to be considered an emergency case.

"2. Would Dr. Selders be allowed to treat the case in spite of the fact that his credentials had not yet been approved.

"Dr. Vaughan felt that the case was no longer an emergency and that Dr. Selders should not be allowed to continue with the case.

"Dr. Coe said the case must be taken care of and that he had been in consultation with Dr. Selders on the case and had advised him to have orthopedic consultation.

"Dr. Cahill thought we should take action, since we had no report from the Washington Academy of Surgery we should act ourselves. He said Dr. Selders is not qualified and a case is no longer an emergency after 48 hours.

"Dr. Martel thought that Mr. Penniman was pressing Sister on a good opportunity. Being an emergency case Sister consulted with Drs. Coe, Martel, Duehring and Dardinski. All agreed to admit patient as emergency. Now we must consider is the case still emergency. If patient is moved what would be the consequences. Furthermore Dr. Selders says he doesn't care who treats the patient but patient must pay doctor. They will not.

"Dr. Stanton said that Dr. Coe had suggested treatment and Dr. Selders is not taking advice. Best interests of patient to be considered first. Case is no longer an emergency.

"Dr. Coe thought that Dr. Selders can do it only with consultation of staff member.

"Dr. Martel moved that Dr. Selders be informed case ceases to be an emergency and should cease treating case.

"Dr. Vaughan again stated that case was not an emergency. The case now could wait a week. Dr. Selders has no right to handle case and now it becomes hospital case. He should not be allowed to operate but courtesy of being present when man operates should be extended to Dr. Selders.

"Dr. Coe described the operation.

"Dr. Mundell thought there were many angles to the case and expressed himself in favor of allowing Dr. Selders to go on with the case.

"Dr. Koppanyi suggested we defer action until we see what other hospitals do.

"Dr. Duehring felt that case should be treated by Dr. Selders to avoid trouble.

"Dr. Vaughan does not agree with Drs. Duehring, Koppanyi and others in favor of allowing Dr. Selders to continue with case.

"The original motion of Dr. Martel's withdrawn. Dr. Martel moved that emergency no longer exists.

"Passed 5 no, 10 yes.

"Sister Rodriguez moved that although permission was given to treat the case now that the case has become operative it must be done under supervision of one of our approved orthopedic surgeons according to the rules of the hospital.

"Passed unanimously.

"Dr. Cahill moved that surgical privileges be withdrawn from Dr. Damian. Dr. Coe seconded. Passed unanimously.

"Motion made to adjourn.

"V. J. Dardinski, M.D.,
"Secretary."

U. S. EXHIBIT 517

Mr. Timberlake:—Now I read from Exhibit 517, which are the minutes of a "Special Meeting of the Executive Committee on Hospital Administration," held Thursday, March 10th:

"SPECIAL MEETING OF THE EXECUTIVE COMMITTEE
ON HOSPITAL ADMINISTRATION

"A special meeting of the Executive Staff was held Thursday March 10th at 12 noon. Father McCauley presiding.

"Those present were Sister Rodriguez, Drs. Hird, Vaughan, Martel, Koppanyi, Cavanaugh, Mollari, Wall, Milone, Solnitzky, Duehring, Cahill, Coe, Mundell, Cutting, and Dardinski.

"Subject for consideration was the letter sent out by the Group Health Organization, Inc., inviting members of the Hospital Staff to attend meeting which was to be held Friday, March 12.

"This letter was read by Father McCauley.

"Dr. Coe read a motion which after suggestions and amendments by Drs. Hird, Wall and Duehring finally read as follows:

"The Executive Staff appointed Dr. Duehring to represent the Georgetown University Hospital in an informal capacity at the Group Health Association meeting with the following instructions, which he is at liberty to use or ignore.

"1. The Georgetown University Hospital will grant privileges to practice to any doctor whose qualifications are such as are deemed sufficient by the credentials committee of the hospital to practice his specialty.

"2. Any patient who is a member of the Group Health Association applying to the Georgetown University Hospital for treatment of any nature will be admitted to the hospital and cared for by the doctor of his choice if said doctor is a member of the staff, or by a designated member of the staff.

"This was seconded and adopted.

"Dr. Duehring said he believed the group should be informed that the hospitals of this city are more open than hospitals in the New England States which are closed to all except those on the staff.

"Dr. Koppanyi said we should tell them frankly that hospitals cannot be coerced into taking men that were not qualified.

"Dr. Martel said that Dr. Scandifio is qualified. He has done something we do not approve and that probably that is what they would like to have some one say. Dr. Martel felt that we should not send a representative.

"Dr. Cahill said we could not ignore the letter. Providence Hospital is sending representative. Thought sending a letter would be better explaining we will be glad to take patients but men must be approved.

"Dr. Duehring moved that a representative be sent to speak informally. Seconded by Dr. Mollari.

"Dr. Coe thought that speaker might refer to the compensation commission work and suggest that the Group Health Organization, Inc. workings might be run along the same lines.

"Father McCauley asked Dr. Martel to go as representative but he declined for reasons of his own. Dr. Duehring was asked to go and accepted.

"Sister Rodriguez felt that a letter should be taken along with definite statements to be read.

"Dr. Vaughan thought that a letter should be taken and used if necessary.

"This was finally done.

"Moved to adjourn at 12:30 p. m.

"V. J. Dardinski, M.D., Secretary.

TESTIMONY OF R. STEPHEN HULBURT

DIRECT EXAMINATION

By Mr. Kelleher:

Richard Stephen Hulburt said he is a general practitioner, a graduate of Georgetown University in 1931.

Q.—And while you were in private practice were you associated with Georgetown University Hospital?

A.—Yes.

Q.—In what capacity?

A.—I was Clinical Instructor in Medicine in the Out Patient Department, that is the Dispensary.

Q.—And how long were you Clinical Instructor in that Out Patient Department?

A.—From about 1932 until about 1937.

Q.—What were your duties as Clinical Instructor?

A.—They were to take care of medical patients in the dispensary and to advise students there in their work.

Q.—Did you also at the same time have courtesy privileges at that hospital, that is, the privilege of bringing in your own patients and treating them there?

A.—I think I did.

Q.—Did you have that continually from the time you finished your internship until 1937?

A.—I don't believe I applied in a formal application immediately; it must have been, maybe, as much as two years before they requested me to fill out a formal application blank.

Q.—Would that be about 1935?

A.—Yes.

Q.—And did you fill out a formal application blank about that time?

A.—Yes.

Q.—And were you formally notified that you had such privileges at the Georgetown Hospital?

A.—Yes.

Q.—What privileges did you have?
A.—Privileges for general medicine; normal obstetrics and minor surgery.
Q.—Dr. Hulburt, did you join the staff of Group Health Association in 1937?
A.—I did.
Q.—Did you join as an assistant to Dr. Lee?
A.—That was the understanding.
Q.—Were you with Group Health Association at the time the clinic opened, their clinic?
A.—I was.
Q.—Who was Gretchen Moriarity?
A.—Gretchen Moriarity was one of the members of Group Health who came there as a prenatal case.
Q.—Did you handle her case early in 1938?
A.—I did.
Q.—Will you tell us what occurred on April 7, 1938, with respect to her case?
A.—I believe she phoned me at the clinic some time in the morning and said she—
Mr. Leahy:—I object to the conversation.
THE COURT:—Sustained.
By Mr. Kelleher:
Q.—Did you attend Mrs. Moriarity?
A.—I did.
Q.—In what condition did you find her?
A.—You mean in the clinic?
Q.—No, on April 7.
A.—I visited her at Georgetown Hospital and she was in labor and I gave her the necessary examination and went back to the clinic.
Q.—After she called you, did you call Georgetown University Hospital?
A.—Yes.
Q.—And whom did you talk to at the Hospital?
A.—I asked for the admitting office and talked with the girl in the office.
Q.—And did you ask permission to bring Mrs. Moriarity in?
A.—I did.
Q.—And what did the admitting office say?
Mr. Leahy:—I objected to that; it is hearsay.
Mr. Levin:—Falls under the same ruling your Honor has made.
Mr. Kelleher:—I will also connect it up with the Superintendent.
Q.—Did you speak directly with the admitting office: Did you ask for the admitting office?
A.—I asked for the admitting office, and I believe I was connected with it.
THE COURT:—While you were connected with the hospital you talked on the phone?
The Witness:—Yes.
THE COURT:—Overruled.
The Witness:—I talked with the girl in the office and told her I was Dr. Hulburt, connected with Group Health, and I had this obstetrics case in active labor. I would like to have her admitted as an obstetrics case; she needed hospitalization.
Q.—And what did the clerk in the admitting office say?
A.—She said she didn't know whether there was any vacancy, but she would find out, and I think she inquired of Sister James Joseph.
Q.—And who was Sister James Joseph?
A.—She was the Sister in charge of the office.
Q.—What was the conversation you had with her?
Mr. Leahy:—The same objection.
THE COURT:—Overruled.
A.—I asked her to admit this patient. I told her I wanted her to admit this patient; that she had a history of having previous children who were delivered very quickly, and her membranes were already ruptured, and I thought she should be in the hospital where she could be under observation.
Q.—And what did Sister Joseph say?
A.—She just asked me to wait a minute; she would take it up with Sister Rodriguez.
Q.—Did she make any suggestion as to who should handle Mrs. Moriarity in the hospital if she was admitted?
A.—I don't recall.
Q.—Did she say anything about the patient being treated as a house patient?
A.—She may have; I don't recall that especially; she may have said that.
Q.—What is a house patient?
A.—A patient who comes in and who is under the treatment of the physician in charge of that service in the hospital.

Q.—I believe you already testified that she said she would speak to Sister Rodriguez?
A.—Yes.
Q.—Who is Sister Rodriguez?
A.—She was the Superintendent of the Hospital at that time.
Q.—Did you wait at the phone while she did that?
A.—I did.
Q.—And did Sister Joseph return to the phone?
A.—Yes.
Q.—What did she say at that time?
A.—She said, Sister Rodriguez said it would be all right to admit her as an emergency patient; that they would never turn down any case that needed help.
Q.—Did you send Mrs. Moriarity in to the hospital?
A.—I did.
Q.—And you attended the patient in the delivery room at that hospital?
A.—You mean in the actual delivery room? I was in and I saw her in the first stage room.
Q.—Did a nurse approach you there at that time?
Mr. Richardson:—I suggest that the witness tell this without the leading questions.
THE COURT:—Yes.
By Mr. Kelleher:
Q.—Will you tell the jury what occurred there at that time?
A.—I went over there about 1 o'clock, I guess, in the afternoon, and examined her, and found that she was not having any pain, and that the procedure of the labor was not as fast as I anticipated, but I knew from her history she had a very rapid labor in other cases. In fact she had no other pains at all. So I examined her and went back to the clinic, and about 5 o'clock, while I was in the clinic, I received a phone call to come to Georgetown right away; that the patient was ready to be delivered. I started out but at that time of day the traffic was heavy. I didn't get here until 5:30. When I got there the nurse told me that Mrs. Moriarity had a sudden pain and the baby had been delivered without any pain. I examined her and found she was all right. The nurse then said that Sister Rodriguez wished to speak with me, so I waited in the doctors' room, the delivery room, and she told me she was glad to admit the patient as an emergency case, and that they would never think of not allowing any one to come into that hospital who they thought could be helped there, but that I should realize that I no longer had privileges there. I said I didn't know that; I had not been notified to that effect, but I didn't care to argue or remonstrate, so I told her I was sorry and went on.
Q.—When did you resign from Group Health Association?
A.—On April 25, 1938.
Q.—After you had resigned from Group Health, did you have a conversation with Sister Rodriguez about obtaining courtesy staff privileges from the hospital?
A.—I did.
Q.—And did you make formal application for such privileges?
A.—Yes.
Q.—Were those privileges granted to you?
A.—Yes.
Q.—Do you have a formal letter notifying you that such privileges had been granted?
A.—I do.
Q.—May I have it? I show you Exhibit 530 and ask you whether that is the letter you received after you applied for courtesy privileges at Georgetown Hospital, after your resignation from Group Health?
A.—It is.
Mr. Kelleher:—I offer Exhibit 530 in evidence.
Mr. Leahy:—No special objection.

U. S. EXHIBIT 530

Mr. Kelleher:—Exhibit 530 is dated May 12, 1938:

"My Dear Dr. Hulburt:
"Your application to practice at the Georgetown University has been approved by the Credentials Committee.
"You have been granted privileges to practice in the branches of medicine checked herein with the understanding that you become a member of your own local medical society within the year."
And there is a check mark next to "Minor surgery," "Medicine," and "Obstetrics, normal."

"Very sincerely yours,
"SISTER MARY RODRIGUEZ
"Superintendent."

By Mr. Kelleher:
Q.—Dr. Hulburt, while you were connected with the staff of Group Health did you apply for privileges at Columbia Hospital?
A.—I don't recall, while I was with Group Health.

Q.—Did you have privileges at Columbia while you were with Group Health?

A.—I don't believe I did.

Q.—Did you obtain privileges at Columbia after you resigned from Group Health?

A.—Yes, I did.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Doctor, do you recall now whether you had ever made application for privileges at Columbia Hospital before you went with Group Health?

A.—I don't recall.

Q.—Isn't it a fact that with any of the hospitals in Washington you have to make application for such privileges?

A.—Yes, that is the general procedure.

Q.—And you have no recollection now of ever having made such an application to Columbia while you were with Group Health, or before you were with Group Health?

A.—No.

Q.—And when you did make application you followed the general routine required by applicant for such privileges in the local hospitals?

A.—When I did apply?

Q.—Yes?

A.—Yes.

Q.—And when you so applied you received it?

A.—Yes.

Q.—Do you remember what year you made the application and received the privileges?

A.—I think 1938.

Q.—After you had resigned from Group Health?

A.—Yes.

Q.—And when was it you resigned from Group Health?

A.—April 25, 1938, I think.

Q.—And how long were you with the G. H. A.?

A.—Just a little over five months.

Q.—And what time did you serve with G. H. A. during that period; was it part time or full time?

A.—I understood it was to be part time, but before I had been there very long it developed into full time.

Q.—What was the reason for that?

A.—The demand was great. There was just so much work, there wasn't any time to do anything else. I did the clinic hours from 9 to 1, made the calls from 1 to 3 and from 3 to 6 was in the clinic.

Q.—When you first went to the clinic what was your time to be?

A.—That was an understanding with Dr. Lee, who first interested me. I understood I was going in to help him as a sort of his assistant in internal medicine.

Q.—Before you got through, you were doing other things?

A.—Yes, I was doing other things. The pressure of the work was so great, so varied, I was doing a great many things.

Q.—You say the pressure of the work was so great and so varied—

Mr. Kelleher:—We object to this line of testimony. It is not proper cross examination. We did not go into that.

THE COURT:—Objection sustained.

By Mr. Leahy:

Q.—At the time you went into the Group Health work, did you go into it for any definite period?

Mr. Kelleher:—Same objection.

Mr. Leahy:—You asked him about his resignation.

Mr. Kelleher:—I didn't ask him about his reasons at all.

THE COURT:—The cross examination is limited, of course.

Mr. Leahy:—Does your Honor hold that I should not go into the reason why he resigned?

THE COURT:—I don't think it is material.

Mr. Leahy:—May I approach the bench?

THE COURT:—Yes, you may have some reason that I can't think of.

Mr. Leahy:—If I have, I assume your Honor will admit the evidence.

(Counsel for both sides approached the bench.)

By Mr. Leahy:

Q.—Now, Doctor, will you tell us why you resigned in April 1938 from Group Health?

A.—Well, I resigned for many reasons that had been going over in my mind for many months, before I made my decision. I had gone to Group Health with the idea: I had heard Dr. Lee describe it as going into a new organization which would provide better medical practice, and it would build up to be comparable to the Ross-Loos Clinic in Los Angeles, and, perhaps, even the Mayo Clinic. That I would go in as an assistant and

be associated with men of national reputation, and I thought it would be of professional advantage to do that. I went in on that basis. For the first month it worked very well. There weren't so many people coming in. By the middle of December the volume worked up, the volume of work had become so great that I was doing work from early morning until late at night—full time work and over.

THE COURT:—I think that is too long; I don't want him to review his relationship with Group Health.

By Mr. Leahy:

Q.—I will ask you if the reason why you left the Group Health Clinic was not because from your experience with the Clinic you found you couldn't do good medical service because of the stress of work laid on you?

Mr. Kelleher:—Objected to; not proper cross examination.

THE COURT:—The Doctor can answer that question yes or no, and it excludes all his explanation as to his relationship with the Group Health; I think he may answer that.

THE WITNESS:—Will you read the question?

Mr. Leahy:—Was it the reason you resigned from the Group Health Clinic in April 1938, that after your experience with it for five months you found you couldn't do good medical work in the clinic because of the stress of work laid on you?

A.—Yes.

RE-DIRECT EXAMINATION

By Mr. Kelleher:

Q.—Didn't you come with Group Health with the understanding you would be Dr. Lee's assistant?

A.—Yes, to help him in medical work.

Q.—And what happened to Dr. Lee?

A.—He left.

Q.—Resigned from Group Health?

A.—Yes.

Q.—In December 1937?

A.—I guess it was about that time.

Q.—And was it then that the work of the Clinic increased and your duties increased?

A.—It was before the middle of December.

Q.—Did your duties increase after Dr. Lee resigned?

A.—They were increasing every day; even before he resigned.

Q.—Were they substantially increased after he resigned?

A.—Yes.

Q.—And were they heavy during the period between the time when Dr. Lee resigned and Group Health obtained Dr. Price?

A.—Yes.

Q.—Did the fact that you were excluded from Georgetown University Hospital influence you in your decision to resign from Group Health?

A.—No, not materially at all.

Q.—Did it influence you at all?

A.—It didn't influence me, it influenced my wife.

Q.—It influenced your wife?

A.—Yes.

Q.—Did you discuss this with your wife?

A.—Yes.

THE COURT:—I don't think it is necessary to go into that.

By Mr. Kelleher:

Q.—Are you a member of the Medical Society now?

A.—I am.

Q.—When did you join?

A.—I filed my application, I think, the following summer after I resigned from Group Health, and at the first meeting after that they acted on it; in November, I think it was, I was accepted in November 1938.

Q.—Prior to your resignation from G. H. A. did you have a discussion with the defendant Yater?

A.—I did.

Q.—What was the substance of that discussion?

Mr. Leahy:—I object to that.

THE COURT:—It is not re-direct examination.

Mr. Kelleher:—It bears directly on the question of why he resigned from Group Health.

THE COURT:—Are you cross examining him?

Mr. Kelleher:—No, this is re-direct examination.

THE COURT:—Well, still he is your witness. You can't cross examine him. If the question refers to anything he might have said to Dr. Yater, it would be a matter of impeaching your own witness, and I don't think you want to do that.

Mr. Kelleher:—I want to show what Dr. Yater said to him.

THE COURT:—You might ask him if Dr. Yater persuaded him in any way to resign, and if he says yes there might be something in that.

Mr. Kelleher:—I think I will let it go.
Mr. Kelleher:—May I recall the witness? I am very sorry.
THE COURT:—Yes.

By Mr. Kelleher:

Q.—Dr. Hulburt, on cross examination you testified that you could not recall whether you had applied for privileges at Columbia Hospital while you were a member of Group Health?

A.—Yes.

Q.—I now show you Government Exhibit 509, which is in evidence, and will read you this to see if it will refresh your recollection.

Mr. Leahy:—Just a minute. Let him see it.

Mr. Kelleher:—I am going to read it.

Mr. Leahy:—No you are not; you should show it to the witness.

Mr. Kelleher:—In order for the situation to be clear, I will read it to the jury:

U. S. EXHIBIT 509

"The application of R. Stephen Hulburt for privileges was tabled."
This is the minutes of the Medical Board. Now does that refresh you as to whether you applied for privileges at Columbia Hospital during the period while you were with the G. H. A.?

A.—No, sir.

Mr. Kelleher:—No further questions.

I now would like to read from Exhibit 510, the minutes of the meeting of June 9, 1938, of the Board of Columbia Hospital.

U. S. EXHIBIT 510

"The following applications for courtesy privileges were considered.
"R. Stephen Hulburt was approved."

TESTIMONY OF FRANCIS X. RICHARDSON

DIRECT EXAMINATION

By Mr. Lewin:

Francis X. Richardson said he was licensed to practice medicine in the District of Columbia in 1938. He graduated from George Washington University and interned at Providence Hospital.

In 1937 and 1938 he lived at 118 Carroll Avenue, Takoma Park, Maryland. He was then a member of the American Medical Association's constituent Society in Maryland. He joined the medical staff of the Group Health some time in December, 1937.

Q.—Did you apply for the appointment?

A.—No, sir. I applied for the appointment in that a man asked me if I would be available for outside calls and I told him I thought I would, and I did go and see about it.

Q.—Who was the man who suggested that?

A.—George McDuffy.

Q.—After Mr. McDuffy asked you whether you would be available, did you then go down to the Group Health Clinic and apply for the work?

A.—I went to see Dr. Brown, who was the Medical Director.

Q.—And as a result of that conversation did you join the staff?

A.—For outside calls, yes.

Q.—Now, what kind of a doctor are you? Have you any specialty?

A.—No.

Q.—Would you be known as a general medicine man?

A.—General practitioner.

Q.—You are not a surgeon?

A.—I am not.

Q.—What services did you undertake to perform for Group Health?

A.—My contract with them was to take outside calls when they called at my office, and make visits to homes.

Q.—Was it intended to be full time, or were you permitted to practice on the side?

A.—It was part time; I was to be permitted to practice in addition.

Q.—And what was the arrangement as to your compensation, at first?

A.—The arrangement was that I should receive a salary of \$150 for making the outside calls, and 4 cents a mile for mileage.

Q.—\$150 per what period of time; per month?

A.—Yes.

Q.—You were to get \$150 and 4 cents a mile for transportation?

A.—Yes.

Q.—Now did you enter into the performance of these services?

A.—Yes, I did.

Q.—How long did you continue with Group Health on that basis?

A.—I resigned from Group Health on the 15th day of July, 1938.

Q.—That is a little over six months after you joined the staff?

A.—Yes.

Q.—Before you resigned had there been any change in the basis of your compensation?

A.—Originally I was only to take calls in and around Takoma Park, and I then took some calls in the District when they raised the compensation to \$200 a month.

Q.—You resigned July 15, 1938?

A.—Yes.

Q.—Did you have a conversation with two members of the defendant, District Medical Committee, on that day at the Sibley Memorial Hospital?

A.—I don't know whether those men were members of the Medical Society or not. I had a conversation with Dr. McNulty and Dr. Mann.

Q.—What are Dr. McNulty's initials?

A.—I am not positive.

Q.—Were those men friends of yours, close friends?

A.—I know Dr. McNulty pretty well. I had known him while I was an intern.

Q.—You don't know his initials?

A.—No.

Q.—Do you know Dr. Mann's initials; Jesse Mann?

A.—I know it is Jesse Mann.

Q.—Where did you have the conversation?

A.—In the cloak room at the Sibley Hospital.

Q.—Did you have courtesy staff privileges at Sibley?

A.—Yes.

Q.—At the time?

A.—Yes.

Q.—All through the 1937 and 1938?

A.—Ever since I began practicing medicine.

Q.—And at other hospitals?

A.—Garfield and Providence.

Q.—Did you have them during that seven months period in 1938?

A.—Yes.

Q.—Now, how did the conversation with Dr. McNulty and Dr. Mann begin? Did they start the conversation or did you?

A.—Dr. McNulty asked me—

Mr. Leahy:—I object to the conversation; it is pure hearsay; the answer is not responsive.

THE COURT:—He didn't ask you that.

The Witness:—Dr. McNulty.

By Mr. Lewin:

Q.—Had you been attending a patient at Sibley at the time the conversation began?

A.—I had; I had been; I was leaving and getting my hat at the cloak room.

Q.—Had you been attending a Group Health patient at Sibley, or a private patient at Sibley?

A.—A private patient; I never had any Group Health patients at any hospital.

Q.—You are not a surgeon?

A.—I never had anything to do with a case requiring hospitalization for a Group Health patient.

Q.—Were Drs. Mann and McNulty together when you had this conversation with them?

A.—Yes.

Q.—Now will you tell the jury. Give your best recollection of the substance of what they said to you.

Mr. Leahy:—Objected to as hearsay.

Mr. Lewin:—It is already in evidence that Dr. McNulty was a member of the District Medical Society, and had been attending some of the meetings. That appears from the minutes which are here and which have been read. It is also in evidence that Dr. Mann was on the Hospital Committee of the Medical Society, which committee was under the chairmanship of Dr. Warfield; and your Honor will also recall from the evidence the activities of that committee. With that evidence in the record I ask that I be permitted to have the statements made at that time to this witness.

THE COURT.—I doubt very much if it is competent evidence. Will you step up here?

(Thereupon counsel approached the bench.)

FEBRUARY 28—MORNING

TESTIMONY OF DR. FRANCIS X. RICHARDSON (RESUMED)

DIRECT EXAMINATION (RESUMED)

By Mr. Lewin:

The witness was asked to identify the letter sent on July 15, 1938, to the Medical Director of Group Health Association.

Mr. Leahy:—That is objected to, if your Honor please, entirely immaterial; the witness is here.

(Mr. Lewin handed document to THE COURT.)

THE COURT:—Step up here a minute.

(Counsel for both sides approached the bench.)

By Mr. Lewin:

Q.—Now, did you write and send in this letter, Exhibit 531, after you had this talk in the cloakroom in the Sibley Hospital with Drs. Mann and McNulty? A.—Yes.

Mr. Lewin:—Exhibit 531 is Dr. Richardson's resignation. It is on his letterhead. It is addressed to R. G. Selders, the Medical Director of G. H. A., and reads:

"Dear Dr. Selders:

"This is to advise you that upon receiving this letter I shall be no longer available to accept calls for Group Health Association.

"Sincerely yours,

"Francis X. Richardson, M.D."

By Mr. Lewin:

Q.—Now, without telling us what was said at that conversation let me ask you whether there was any connection between that conversation and this resignation.

Mr. Leahy:—Objected to.

THE COURT:—Sustained.

By Mr. Lewin:

Q.—Without telling us what the conversation was at the Sibley Hospital, tell us why on July 15, you sent in this resignation.

Mr. Leahy:—Same objection.

THE COURT:—Sustained.

Mr. Lewin:—Will you hear me on this? It is clearly under the allegation of the indictment.

THE COURT:—The only effect would be to get in indirectly what I have ruled out directly.

Mr. Lewin:—I thought you ruled it out as hearsay.

THE COURT:—It is an attempt to get into this case hearsay.

Mr. Lewin:—The indictment alleges he resigned for a certain reason. I should like to show that reason.

THE COURT:—You have told me that. I have ruled.

Mr. Lewin:—I can't go any further; I hand him over to you.

CROSS EXAMINATION

By Mr. Leahy:

Q.—And you had your own office from 1934 to 1937?

A.—Yes.

Q.—And you went in with Group Health as a part-time man, did you? A.—Yes.

Q.—What time: when did your hours begin? A.—It began in the morning any time, about ten-thirty, as a rule, I used to get the first call.

Q.—And ran on all through the day and night? A.—It ran up to night, yes.

Q.—How late at night? A.—Very seldom did I have to make calls after 8:00 o'clock at night.

Q.—Have you any idea how many calls a day you made?

Mr. Lewin:—Objected to as immaterial.

THE COURT:—Sustained.

Mr. Leahy:—Could I ask your Honor to approach the bench?

THE COURT:—Yes.

(Counsel for both sides approached the bench.)

By Mr. Leahy:

Q.—You were first employed at the rate of \$150 per month? A.—Yes.

Q.—The Group Health Association paid you, did it? A.—Yes.

Q.—And later on it was increased to \$200 a month? A.—Yes.

Q.—Do you remember when it was raised to \$200?

Mr. Lewin:—Objected to. Not proper cross examination.

THE COURT:—It was brought out on direct. He may answer.

The Witness:—Some time in February.

TESTIMONY OF WILLIAM C. KIRKPATRICK
Recalled as a witness.

FURTHER DIRECT EXAMINATION

By Mr. Lewin:

Q.—Mr. Kirkpatrick, I would like to ask you whether you know how final payment was made for hospitalization bills at the Sibley Hospital, bills of Tommie Lee Nix; Howard Vickery, and Miss Taylor Owen. A.—Yes, I know.

Q.—How was it done? A.—Made in cash.

Q.—By whom? A.—Well, I had the cash drawn and in one instance I gave it to my secretary to take up there; and in another instance I gave it to one of the patients, and in the third instance our bookkeeper took it up, Mr. Bias.

Q.—And the money came from the treasury of Group Health Association? A.—Yes, we drew the money from the bank. We didn't receive receipts for that money, as an association.

Q.—Did you have any instances in which Group Health Association compensated members of the District Medical Society for services rendered to Group Health patients? A.—Yes, I recall a few instances of that sort.

Q.—Were there any cases in which it was necessary to pay in cash? A.—Yes, I think Dr. Warfield was one instance.

Q.—Now, what was your purpose in seeking this interview with Mr. Rice of the Washington Sanitarium? A.—Our purpose was this. We hadn't succeeded at that time in getting our doctors into the hospitals in Washington so we thought we would try the Washington Sanitarium, and for that purpose we went to see Mr. Rice.

Q.—What did you say to Mr. Rice on that occasion, and what did he reply? A.—I told Mr. Rice—

Mr. Leahy (interposing):—Who is he, Mr. Rice?

The Witness:—Credit manager of the Washington Sanitarium.

Mr. Leahy:—I object to the conversation with Mr. Rice.

THE COURT:—The position of credit manager doesn't indicate any general power on the part of such a person to bind the hospital.

Mr. Lewin:—Your Honor has already admitted Exhibit 451, which is Mr. Kirkpatrick's letter to Mr. Rice.

THE COURT:—Yes, I did that in the belief, on the theory that in the natural course of things a letter sent would get to the proper official of the hospital. When you ask for a conversation had with a credit manager, that is something else. There does not appear any inherent power in such a person to speak for the corporation.

By Mr. Lewin:

Q.—How did you make your approach to the Washington Sanitarium; had you known Mr. Rice previously? A.—No, we went out there and asked for the man in charge and were directed to Mr. Rice.

Q.—You asked for the man in charge of the hospital? A.—Yes.

Q.—Who did you ask that of? A.—The information desk.

Q.—And you were directed to Mr. Rice? A.—Yes.

Q.—Did he have an office there? A.—He did.

Mr. Lewin:—What do you think of it now, your Honor?

THE COURT:—I don't think that helps any. I don't know who directed him. It may have been an elevator boy.

The Witness:—No, it was a lady seated behind a desk marked "Information."

Mr. Lewin:—I don't know how a person would go about reaching the proper official. He said he went out there and went through the main door to this information desk and was referred to Mr. Rice.

The Witness:—The only door I saw, I guess it was the main door.

By Mr. Lewin:

Q.—And there was a desk there with the word "Information" on it? A.—Yes, there was a desk with "Information" on it, and I asked who was in charge of this hospital and they directed me to Mr. Rice.

Mr. Lewin:—I submit, your Honor, we are in the right pew. I don't know where else anybody would go except to the reception desk.

Mr. Leahy:—Aren't there some exhibits in the case?

Mr. Lewin:—Indeed there are. An exhibit which has been admitted which shows Mr. Kirkpatrick's letter to Mr. Rice. Now, it must have gotten into the proper channels because he gets this reply from Dr. Hare.

THE COURT:—I have no doubt about that. It bears out exactly what I said. You haven't proved Mr. Rice's authority to act for the hospital. If you can show me where it is I will be glad to see it.

Mr. Lewin:—Your Honor's ruling is that I can't go into that conversation; either bring out what Kirkpatrick told the hospital or what was said to him?

THE COURT:—Yes.

(The witness was then taken up to the conference with Major Gist Blair.)

The Witness:—We met in the office of Major Blair in the Emergency Hospital. Present at that conference was Major Blair, Mr. Sandidge, the superintendent of the hospital, and Dr. Mitchell, who, as I understood, was chief of the surgical staff. Accompanying me was Mr. Horace Russell, a member of the Board of Directors and General Counsel for the Federal Home Loan Bank Board. We stated the purpose of our visit there, namely to see whether we could enter into an arrangement whereby doctors of Group Health could make application to Emergency Hospital and be admitted to courtesy privileges, provided their qualifications were proper.

We found Major Blair very cooperative. He made the statement that he was in sympathy with what we were trying to do, and he made the statement that he thought there was a place in the medical field for Group practice of medicine.

Mr. Sandidge contributed nothing to the meeting. He didn't say a word. Dr. Mitchell said very little more. After some discussion of perhaps 20 minutes or a half an hour, they spoke of getting our staff in there. Major Blair volunteered that he would do what he could among his acquaintances in the other hospitals and among the medical fraternity in the District to see whether or not this question might not be resolved in favor of Group Health to the end that we be admitted to that hospital, but he offered the information that it was a part of the by-laws of that hospital that any physician on the courtesy staff must by reason of that fact be a member of the District Medical Committee, and we told Mr. Blair that none of our doctors at that time were such. He said that he would communicate with us in writing when and if he was successful in obtaining any information that he thought might be helpful or favorable to us, and at the end expressed his interest in this thing and his sympathy with it, and with that the meeting ended.

Q.—Were you asking for the admission of any particular doctor on Group Health staff or all the doctors? A.—We didn't name anybody at all. We asked for the staff as a whole. We said "our doctors." That is the way we put it.

(The witness identified some of the correspondence.)

Mr. Lewin:—I am going to offer in evidence Exhibit 392, which is a copy of a letter to Major Blair from Mr. Horace Russell, and Major Blair's reply, which is Exhibit 532, to Mr. Horace Russell, dated Feb. 10, 1938. I call counsel's attention to the fact that apparently that letter of Major Blair is not signed by him. It has been testified that the initials "C. G." which appear on it are the initials of his secretary or assistant secretary.

Mr. Richardson:—May we approach the bench?

THE COURT:—Yes.

(Counsel for both sides approached the bench.)

U. S. EXHIBIT 392

Mr. Lewin:—Government Exhibit 392 is a letter from Mr. Horace Russell to Major Gist Blair, dated February 9, 1938, reading as follows:

"Dear Major Blair:

"I write to express my appreciation and that of my associates for your accommodation of us in arranging for and taking the time to discuss with Mr. Kirkpatrick and me the hospitalization problems of the members of Group Health Association, Incorporated. We were glad to present to you and your associates at the hospital our problem as best we could and, particularly, we appreciate your kindness in suggesting that you would look further into the matter and discuss it with others and see what can be done about it.

"It occurred to me that you might like to know that in our recent dealings with the Medical Society of the District of Columbia it has been represented by Messrs. Frederick A. Fenning, George P. Hoover and Wm. E. Leahy, and it may be that you will be willing to discuss the matter with these gentlemen. We assure you that we shall be glad to discuss this problem with you and others concerned at any reasonable time, and that we are anxious to make proper provision for our hospitalization which will permit our treatment in the hospitals by competent physicians and surgeons selected by ourselves. We should like very much to avoid any controversy about the matter if we can.

"Meanwhile, we shall await word from you as to the course you advise.

"Very truly yours,

"Horace Russell."

Mr. Magee:—Read the next line.

Mr. Lewin:—"Horace Russell, General Counsel."

I will read the next one, which is dated Feb. 10, 1938, from Gist Blair to Horace Russell:

U. S. EXHIBIT 532

"Dear Mr. Russell:

"Replying to your letter of February 9th, I think I understand your method of approaching the hospitalization problems of the members of the

Group Health Association, Inc. and for that reason I feel I can say that I try to approach problems in this same way. The problem you have suggested to me is a very big one and the adjustment of the conflicting interests requires tact and persistence and a great deal of trouble to instill into the minds of people whose interests are affected a comprehension of the wisdom necessary to give up a little on their part in consideration of a little being given up on the part of others.

"I am not able to clear up your problem for you much as I would like to do so. I will, however, feel around and find just what can be done and if I find any favorable indications, I will arrange a meeting with you. I do not like letter writing because letter writing sometimes adds to the many misunderstandings which angry discussion always causes and frequently brings about the worst possible results.

"Sincerely yours,

"Gist Blair."

By Mr. Lewin:

Q.—I think you have told us that following some correspondence with Mr. Aspinwall, the president of Garfield Hospital, you had an interview with him in February of 1938?

A.—That is correct.

Q.—Will you state to the jury the substance of that conversation? A.—Present there were Mr. Aspinwall, Mr. Ormond Loomis Reed and myself. I told Mr. Aspinwall the purpose of our visit, which was to try to get the members of our staff admitted to the courtesy staff of Garfield Hospital. He knew that Dr. Selders had already had temporary privileges there; but I told him that we were interested not only in one physician, but we were interested in all of them. I asked what he thought he could do to bring about that result. "Well," he said, "I have been following the difficulties that you seem to be having for some time past here and," he said, "I am not altogether in sympathy with some of the opposition that you encounter." He said, "We in the hospital board of trustees are, for the most part, laymen, and we try to be guided in our decisions with respect to the admission of physicians by the conclusions of the medical staff who, in the end, are the ones we deem best fitted to advise us."

He offered also to speak among his friends in the other hospitals and among the physicians here in Washington and see if some solution of this question might not be had. He made this suggestion, that what he called a Committee of Arbitration be established to the end that both sides might submit whatever they chose to that committee, and ask the committee to arrive at a conclusion. That conclusion would be adhered to by agreement of both sides. Nothing ever came of the suggestion, so far as I know. I never heard anything more about it.

During the course of the conversation I told Mr. Aspinwall that word had come to me that the physicians of at least one hospital in Washington, which perhaps was his, had threatened to walk out if any member of the staff of Group Health Association were admitted to that hospital.

"Well," he says, "I am afraid of that."

"Well," I said, "Mr. Aspinwall, when are the trustees of these hospitals, who certainly have a trust to perform, going to take this question in hand and make some decision about it?"

"Well," he says, "I don't know." He says, "We are pretty much in the hands of the physicians in our hospitals."

He volunteered to ask his counsel, Mr. ——— I have forgotten the name of the gentleman—

Q.—Mr. Dunlop?

A.—Mr. Dunlop—to confer with counsel for Group Health Association, just as a matter of clearing up any question of legality that might be in Mr. Dunlop's mind. No question of the legality of the Association was brought up at that meeting at all. It all hinged on the question of admission of the doctors of our staff as such to the courtesy staff of the hospital.

Q.—Did you hear anything further from Mr. Aspinwall except the letters that we offered in evidence on the day you were on the stand? A.—No, sir; that is the last I had from Mr. Aspinwall.

Q.—Following your correspondence, or your letter of July 28, telling him about Mr. Justice Bailey's decision? A.—That is right, sir.

Q.—Do you know Mrs. Eugene Meyer? A.—I do.

Q.—Is her name Agnes E. Meyer? A.—That is what I understand.

Q.—Who is she? A.—She is the wife of the owner and publisher of The Washington Post.

Q.—Did you ask her to do anything for Group Health Association in the way of getting in any of the hospitals?

Mr. Leahy:—Objected to as immaterial.

THE COURT:—I do not see the admissibility of it on the face of the question.

Mr. Lewin:—May we come to the bench, your Honor?
THE COURT:—Yes. I would like to know what the purpose of the question is.

(Counsel for the respective parties approached the bench.)

By Mr. Lewin:

Q.—I believe you are permitted to answer that last question.

THE COURT:—I think you asked him if she did write a letter.

Mr. Lewin:—I do not think that is clear in the record, your Honor.

By Mr. Lewin:

Q.—Did you ask Mrs. Meyer to write to one of the Washington hospitals?

Mr. Leahy:—I object to that as immaterial. Let him identify the letters if he can.

Mr. Lewin:—His Honor thought it was already in, and I was just trying to clear up the question.

THE COURT:—He may answer the question.

Mr. Richardson:—Do I understand you include the text of the letter, the argument that is made in the letter that went to the hospital?

THE COURT:—I do not know whether there was an argument or not. I have not seen the letter. Some of it may not be admissible; I do not know. But I am permitting these preliminary questions.

By Mr. Lewin:

Q.—What is your answer? A.—I asked Mrs. Meyer—

Mr. Leahy:—Yes or no; that is enough.

THE COURT:—Yes.

The Witness:—Yes.

By Mr. Lewin:

Q.—Now, tell us what you asked her to do.

THE COURT:—I do not think you need to go into the details of it.

By Mr. Lewin:

Q.—What hospital did you ask her to approach? A.—The Casualty Hospital.

Q.—Did she agree to do it? A.—She did.

Mr. Leahy:—I object.

By Mr. Lewin:

Q.—What did she tell you she would do?

Mr. Leahy:—I object.

THE COURT:—Objection sustained. I am not going into the details of that conversation. I think there is enough of it which is preliminary to the letter.

By Mr. Lewin:

Q.—At your request did she write a letter to Mr. Allmond, the secretary of the board of trustees of Casualty Hospital?

Mr. Leahy:—I object. He cannot know whether she wrote a letter except just by hearsay.

THE COURT:—He might know if he saw her write it. He can say whether he knows.

The Witness:—She did.

By Mr. Lewin:

Q.—Did she show you the letter she sent them? A.—She did.

Q.—Is this (indicating) the letter she sent Mr. Allmond of the Casualty Hospital? A.—That is the letter; yes, sir.

Q.—Did she show you the reply that she received? A.—She sent me the reply.

Q.—I show you U. S. Exhibit 534, which purports to be her letter to you, dated June 11, 1938, and ask you if that is the letter she sent you? A.—It is.

Q.—And I will show you U. S. Exhibit 536 and ask you if that was the letter from Casualty Hospital which she enclosed? A.—It was—it is, rather.

Mr. Lewin:—I offer them in evidence.

Mr. Leahy:—May I pass these to the court?

THE COURT:—Yes.

Mr. Lewin:—Do you object to them?

Mr. Leahy:—Yes, indeed (handing letters to the court.)

(Counsel approached the bench.)

Mr. Lewin:—Members of the jury, the court rules that U. S. Exhibit 533 for identification, Mrs. Meyer's letter, is not admissible, but I am permitted to state that that letter did request from that hospital the admission of Group Health Association doctors for courtesy privileges.

Exhibit 536, however, is received in evidence, and it is the reply of S. H. Rogers, president of the board of directors of the Eastern Dispensary and Casualty Hospital, to the letter of Mrs. Meyer, dated June 10, 1938, and on the letterhead of that hospital:

U. S. EXHIBIT 536

"Mrs. Eugene Meyer
1624 Crescent Place N.W.
Washington, D. C.

"Dear Mrs. Meyer:

"I wish to acknowledge your letter of the 26th to Mr. Allmond, the Secretary of our Board, on the subject of Hospitalization for Group Health Association Patients, as I am Chairman of the Committee which has handled this problem for our Board.

"Our Committee has given very earnest consideration to this problem as relates to our institution, but as stated to Mr. Kirkpatrick and Mr. Loomis at a recent interview, on account of long-established by-laws and rules of our institution we have not been able to work out a plan that permits our accepting patients to be attended by physicians who have not the approval of the local medical society.

"We appreciate very much your interest in our institution in connection with this matter, and it is our hope that the Medical Society and the officers of the Group Health Association may soon find a solution to their differences, as we understand they are still working toward that end.

"Very truly yours,

"S. H. Rogers

President, Board of Directors
Eastern Dispensary and Casualty Hospital"

By Mr. Lewin:

Q.—That letter refers to some explanation which Mr. Rogers gave you and Mr. Loomis. Was that at the conversation which you testified you had with Mr. Rogers some time in June of 1938? A.—It was.

Q.—Will you state to the jury what the conversation was at that meeting, what you said and what was said by these people representing the hospital? A.—In substance, it was this. We again offered our plea for admission of the members of our staff to Casualty Hospital, and Mr. Rogers led the conversation for the other group, and he said that it had been a tenet of their by-laws for some fifty years that no admission to the courtesy staff of that hospital could be made unless the applicant were a member of the District Medical Society; and he offered that as the one and only stumbling block in the way of admission of any of our staff members to that hospital. I offered at that meeting to enter into a contract with that hospital to take over one of its bays—

Q.—What is that? A.—Sick bays—they call them bays or wings of the hospital—which I understood contained approximately 40 beds; that we would rent these beds under contract, provided the hospital would admit our physicians to treat patients who might occupy those beds. But again he offered the objection that the by-laws of the hospital would prevent such action. Finally, addressing Dr. Rogers Young, I think his name is, who I understood was the man in charge of the surgical staff of that hospital, or its medical staff, I said to him, "Doctor, when are you hospital people going to stand up on your hind feet and assert your rights in this question?" His reply was that he did not know. After a little more discussion about the subject in general the meeting ended.

Q.—Was the defendant J. Rogers Young present during the entire interview? A.—My recollection is he was there during the entire interview.

CROSS EXAMINATION

By Mr. Leahy:

Q.—When you opened up the conversation you were then advised that for a period of approximately fifty years the rules and regulations of the hospital were such that they could not admit doctors to the staff who were not approved by the local medical society? A.—No; he didn't say that.

Q.—What did he say? A.—Mr. Rogers said that it had been a part of their by-laws for upwards of 50 years that admission to the courtesy staff of their hospital was confined to members of the District Medical Society.

Q.—What you wanted them to do was to change those by-laws to admit your doctors; is that right? A.—I wanted them to do anything they thought best to do.

Q.—To do that you knew they would have to change the by-laws which had been in effect fifty years? A.—Perhaps.

Q.—You knew that, didn't you? A.—No; I didn't know that at all. I had nothing to do with what they should do. All I was interested in was in getting our staff in there. How they did it I wasn't concerned with.

Q.—But you knew they could not get in there unless they changed the by-laws which had been in force for fifty years? A.—Yes; from the statement of Dr. Rogers.

Q.—Notwithstanding that, you still persisted, did you, to get this letter of June 11— A.—I wouldn't say I persisted; no.

Q.—You went to Mrs. Meyer, did you not, and asked her to write? A.—I first asked her to call a meeting. Mrs. Meyer said she didn't have time to call a meeting, but would be glad to write a letter.

Q.—You told him you would fill up one of the sick bays?
A.—I did not.

Q.—You told him you would hire one of the sick bays?
A.—I told him I would offer to.

Q.—You mean, you would, don't you? A.—Yes, if he would.

Q.—That is, G. H. A. would rent one of the sick bays in Casualty Hospital? A.—Yes.

Q.—In connection with that do you recall that Mr. Rogers said anything about the fact that Casualty Hospital was incorporated to take care of the poor? A.—No. I recall no such statement as that. He may have made it, but I don't recall it.

Q.—See if I can refresh your recollection. Do you recall whether Mr. Rogers said to you that Casualty Hospital was incorporated to take care of the poor and the indigent, and you replied, "We are not interested in that"? A.—No; I don't recall any such thing.

Q.—Would you say it was not said? A.—I will say that I don't think I said it.

Q.—Was there anything said that Casualty Hospital was approaching its 50th anniversary of existence? A.—I don't recall that. The only reference to 50 years was Mr. Rogers' statement about the by-laws.

Q.—Did you then tell Dr. Rogers that if he would let you take this bay of forty beds you would get Mr. Acton, the publicity agent for G. H. A., to push Casualty and give them great publicity on their fiftieth anniversary? A.—Never made any such statement.

Q.—Nothing like that in substance? A.—Nothing like that, approaching it, near it, or anything around that.

Q.—Did Mr. Loomis make any such statement? A.—I don't know.

Q.—You were there, weren't you? A.—I was there, but I don't recall his making any such statement.

Q.—Would you say he did not make such a statement? A.—I will hazard a guess that he didn't make it.

Q.—So your answer as to this conversation is that nothing was said about the incorporation of Casualty Hospital to the end that it was to take care of the sick and the indigent, in which you were not interested? A.—Nothing that I recall at all about that.

Q.—And that nothing was said about booming Casualty if they would let G. H. A. patients take over that bay? A.—No. We had no interest in booming Casualty or anything else.

Q.—Did you have a publicity agent? A.—No, sir; I did not.

Q.—Who was Mr. Acton? A.—Howard Acton; chairman or director of public relations for the Federal Home Loan Board.

Q.—Did he have anything to do with establishing G. H. A.? A.—I don't think he did anything toward it.

Q.—Did he carry on publicity for G. H. A. in the papers? A.—I don't know how much of it—

Mr. Lewin:—Objection.

THE COURT:—Sustained.

By Mr. Leahy:

Q.—When was it you talked to Mr. Aspinwall? A.—I think it was in August 1938.

Q.—You recall a letter in January having been received from Garfield? A.—I recall a letter having been addressed to Dr. Selders in January.

Q.—You know that Garfield Hospital told you then, do you not, that until the question of the legality of Group Health Association was determined, they could not admit Dr. Selders on the staff? A.—They didn't tell me anything.

Q.—You saw that in a letter, did you not? A.—They told Dr. Selders that.

Q.—I am talking about you, now, as Group Health Association. A.—Fine!

Q.—This letter which was received by Dr. Selders was turned over to your files, was it not? A.—Yes.

Q.—And you saw the letter in your files? A.—Yes.

Mr. Lewin:—That has already been testified to.

By Mr. Leahy:

Q.—So you knew in January, did you not, that Garfield Hospital had taken the position that it could not admit Dr. Selders to staff privileges in Garfield until the legality of G. H. A. was determined? A.—I knew that was the statement of the Superintendent, but I didn't know that that was the policy of Garfield Hospital.

Q.—You do know that that was the policy as stated to you by the Superintendent, through Dr. Selders? A.—No. I know it was the expression of the Superintendent; that is all.

Q.—You did not think he was speaking for the hospital? A.—I didn't think anything; I didn't know.

Q.—Did you deny in any way at all to him that that was the policy of Garfield? A.—No.

Q.—It was not discussed in the conversation? A.—It was not.

Q.—And he, as a member of the Board, did not bring up to you the fact that the hospital had discussed this matter in the previous January and determined that they could not admit such doctors until the question of legality had been determined? A.—No legality was ever mentioned at all. I said on the stand this morning that the only reference to that question was the statement that I knew that Dr. Selders had been denied privileges in January.

Q.—But the reason for that denial was not discussed? A.—It was not.

Q.—At that very time, along in January, you had made application to Garfield, had you not, for the admission of Dr. Selders? A.—I am not sure that I made it to Garfield. I don't think so, because he was already in Garfield at that time when I became president.

Q.—You became president and took over your duties on January 18, did you not? A.—That is correct.

Q.—And within ten days you got this letter from Garfield? A.—About that; it was January 25.

Q.—Did you then make an application to Garfield for privileges? A.—I think, perhaps, on February 2nd, but not in January.

Q.—You know you did, don't you? A.—Well, if I did I know I did.

Q.—Have you any doubt about it? A.—I just don't know I did—because you offered that as a statement. If I did I know I did.

Q.—Did you not testify on Monday that on February 2nd you made another appeal to all the hospitals in Washington? A.—Oh, yes; sure.

Q.—Then you did go to Garfield with this appeal? A.—Yes.

Q.—Why did you say "If I did I did," then? A.—Because I am not going to have you put words into my mouth.

Q.—I am not doing that. I am asking you to answer a question which is directly put to you. Now listen, please— A.—If you will let me do that, we will get along fine.

Mr. Lewin:—I object to all this bullying by counsel. Show him the letter.

Mr. Leahy:—You have got it. Give me the February 2 letter to Garfield.

Mr. Lewin:—You are showing off here at a great rate.

Mr. Leahy:—If you Honor please, I am trying to do the best I can.

Mr. Lewin:—You are trying to bullyrag this perfectly honest witness about a letter, and you have the letter in your hand.

THE COURT:—Mr. Leahy, if you have got the letter now, let us go on.

By Mr. Leahy:

Q.—You did write to Garfield on February 2nd? A.—Yes.

Q.—And you knew when you wrote on February 2nd that on the 28th day of January you had signed a petition for a declaratory judgment in this court? A.—I signed such a petition; I don't know what date it was.

Q.—I am going to show you the petition and ask you if your signature appears where I am indicating. A.—That is my signature.

Q.—And in that respect you were represented, were you not, by Horace Russell, Mr. Keeley, Mr. Long and Mr. Newton? A.—That is correct.

Q.—All counsel for the Home Owners' Loan Board? A.—All employees of the Home Owners' Loan Corporation.

Q.—And you swore to it, did you not, on January 27? A.—That is correct.

Q.—Your signature appears there, does it not? A.—It does.

Q.—And you had sworn to this petition in this court—you can read over those pages to refresh your recollection if you wish. A.—I wouldn't understand them, but I will take your word that they are there.

Q.—You have no difficulty in understanding what you swore to, have you?

THE COURT:—Put your next question, Mr. Leahy.

Q.—Did you swear on the 27th of January that on or about Jan. 15, 1938—

Mr. Lewin:—I object to that as immaterial.

Mr. Leahy:—This is on the cross of what he said on direct.

Mr. Lewin:—He didn't say anything about this suit on direct.

Mr. Leahy:—Oh, yes he did.

Mr. Kellcher:—Another objection, your Honor, he is trying to read to this witness these conclusions of law from this suit for declaratory judgment.

THE COURT:—I would like to hear the question. I cannot rule on it until I do.

By Mr. Leahy:

Q.—Did you swear on January 27 that on or about Jan. 15, 1938 notice was given by the defendant, David A. Pine, Acting United States District Attorney for the District of Columbia, to the plaintiff, that, unless operations were immediately suspended and the affairs of the plaintiff were wound up, a bill for injunction or legal proceedings looking to the involuntary dissolution of the plaintiff corporation would be brought against the plaintiff on the ground that it, said plaintiff, is illegally engaged in the practice of medicine, as the same is defined by the Healing Arts Practice Act in the District of Columbia, and is illegally engaged in the insurance business within the meaning of Title V, Chapter 7, Section 179 of the Code of Laws of the District of Columbia?

Mr. Lewin:—We object to that as immaterial. It is outside the scope of the direct examination.

Mr. Leahy:—He went into it on direct examination.

Mr. Kelleher:—What difference does this make?

THE COURT:—I am ready to rule.

Mr. Leahy:—May I approach the bench?

THE COURT:—Yes.

(Counsel for both sides approached the bench.)

By Mr. Leahy:

Q.—I show you Government's Exhibit 433 and ask you if that is an answer to your letter of February 2, Government Exhibit 432? A.—I would say it was.

Q.—Now he says there if you want to drop into the office and discuss the matter, he would be glad to talk to you. Did you do it? A.—Yes, we dropped in his office.

Q.—Then you did see him before this conversation? A.—No. I only saw him once. Whenever that conversation took place, that was the time.

Q.—You had only the one conversation? A.—Yes.

Q.—Now I ask you to look again at Government's Exhibit 432 and tell me whether you discussed the legality of G. H. A. A.—I still say we did not.

Q.—Isn't Government Exhibit 432 the very thing you wanted to talk about? A.—It may have been the thing we wanted to talk about, but it isn't the thing we talked about. You asked me what we talked about. Now, that isn't what we talked about.

Q.—All right. On Feb. 2, 1938, you wrote to Mr. Aspinwall that you felt there may have arisen some misunderstanding concerning the legality of our operation and in order that the question may be discussed and a clear understanding had by both parties, it is respectfully requested that the representatives of Group Health Association, Inc., be accorded the privilege of appearing before your Board of Trustees for the purpose of discussing the situation with them. A.—That's fine. I wrote that letter.

Q.—All right. Now on February 3 you received back a letter from Mr. Aspinwall saying "I would be glad to discuss the matter. I should be glad to talk to you." A.—Yes, we did.

Q.—Now, you went there to discuss what you said in your second paragraph of your letter of February 2nd? A.—No, we did not discuss that.

Q.—Just a moment. On February 2 that is the thing you wanted to discuss, isn't it? A.—That is one of the things we wanted to discuss.

Q.—Is there anything else you stated in your letter of February 2nd you wanted to discuss? A.—I—

Q.—Was there anything other than the legality of G. H. A.? A.—Not in the letter.

Q.—Now, when you did get in this discussion, the only thing you didn't discuss was the thing you wanted to discuss in your letter of February 2nd? A.—No, we didn't necessarily want to discuss it at all. We didn't think it was a pertinent question. If Mr. Aspinwall wanted to discuss it, fine, and good, we were ready to discuss it.

Q.—But you didn't bring on the discussion at all? A.—We did not.

Q.—You knew at that time, did you not, that the suit which you swore to and which you just identified your signature on, had been filed in this Court, about three or four days before?

A.—I knew that such a paper had been filed.

Q.—And that was the question you wanted to raise in your suit, was the legality— A.—No, I am not a lawyer, Mr. Leahy. I don't know anything about legal matters at all.

Q.—You don't mean to tell the jury that you didn't know what was involved in that suit? A.—That isn't what your question was and that isn't what my answer was.

Q.—Will you now say that the suit— A.—I have already admitted I knew that.

Q.—And you filed the suit four days before you wrote the letter of February 2? A.—Yes, and had no question of the suit in my mind when I wrote the letter; none whatever.

Q.—In your letter of February 2 in the second paragraph you had no reference— A.—No reference or question in my mind or anything else of that suit, and I want to make that as clear and emphatic as I possibly can; and if you want it repeated, I will be glad to repeat it.

THE COURT:—Mr. Witness.

The Witness:—Yes.

THE COURT:—Please contain yourself.

Mr. Kelleher:—Your Honor, I do think his attitude is understandable.

THE COURT:—I am speaking to the witness now, not counsel.

Mr. Kelleher:—I want to make a representation to the Court.

THE COURT:—I want to say to the witness and I want to say to counsel too, I don't want this to get into a personal wrangle between counsel and the witness. I am simply wanting both sides to maintain the cross-examination on a plane that is proper.

Mr. Kelleher:—I think, your Honor, it is fair to the Government to say this witness' attitude is very understandable.

THE COURT:—I think his answers should apply to those letters.

By Mr. Leahy:

Q.—Now, let us get to the Episcopal Hospital. You wrote a letter on February 2nd to them also, didn't you? A.—That is correct.

Q.—Did you ask privileges for all your doctors in Episcopal? A.—No, sir.

Q.—For whom did you ask privileges? A.—Dr. Dabney.

Q.—Wasn't Dr. Dabney on the staff? A.—Dr. Dabney was on the staff, as I understand it.

Q.—Just what were you asking for at Episcopal? A.—Because Dabney couldn't take our patients in as a member of our Association; as I said the other day, he took them in through the back door.

Q.—Did he take patients to Episcopal Hospital? A.—He did.

Q.—How many patients did he take in? A.—Approximately 50 at that time.

Q.—Did he pay for them? A.—Yes, sir. They paid approximately \$14 for each patient.

Q.—Did the Episcopal refuse to take your checks? A.—No, sir.

Q.—So that Dr. Dabney took 50 patients of G. H. A. into the Episcopal Hospital for which G. H. A. paid by its checks? A.—That is correct.

Q.—Right? A.—Right.

Q.—Was Dr. Dabney ever removed from the staff of Episcopal? A.—Not that I ever heard of.

Q.—You know that Dr. Dabney had been on the staff of Episcopal Hospital for a good many years? A.—He told me he had been.

Q.—And you know he remained there notwithstanding he was connected with G. H. A.? A.—Well, do you want me to tell you what he told me?

Q.—I asked whether you knew he remained on the staff. Yes or no. A.—Yes, he remained on the staff.

Q.—Now, are you sure that there was any problem at all about Dr. Dabney getting patients of G. H. A. in the hospital? A.—Well, that resolves itself around what he told me, Mr. Leahy, which has a very direct connection with the question if you would like me to say it.

Q.—I will let you say it and we will be glad to get it. A.—Dr. Dabney told me they dared not touch him in Episcopal, that they had to let him bring patients in there, even by the back door.

Q.—Is that what Dr. Dabney said? A.—Yes, sir.

Q.—Then you did yet your G. H. A. patients in there? A.—We did under this surreptitious arrangement.

Q.—What was the surreptitious arrangement? A.—That he wasn't admitted there as a surgeon or physician recognized by the hospital as being on our staff. He was there as a private physician, and he brought our members in there as his private patients. Now that—

Q.—Have you ever—have you finished? A.—I just wanted to say one more thing. We wanted him recognized as a member of our staff. We didn't like this business of him having to take patients in there quietly, any more than he did.

Q.—Did you ever talk with anybody of the Episcopal Hospital about this? A.—I never saw or spoke to a single one of them.

Q.—What information you got you got from Dr. Dabney? A.—I got right from Dr. Dabney.

Q.—Did you, as President of the Corporation, have any difficulty in having G. H. A. cases treated there? A.—We never had a bit of difficulty that I ever heard of.

Q.—In other words, any G. H. A. patient who was under Dr. Dabney's care while Dr. Dabney was with you, was treated at the Episcopal Hospital without any difficulty? A.—Yes, sir.

Q.—Now, at Columbia you had a series of letters, I think, which you wrote, beginning again on February 2. Is that right? A.—February 2. That's right.

Q.—Now did you ask for privileges for all your members at Columbia? Yes or no. A.—The letter speaks for itself, Mr. Leahy. I don't recall just exactly the wording of the letter, but I think it asks for privileges for all the members. It may not have.

Q.—So then was that the same letter which you sent to all the hospitals? A.—It was an identical letter, yes.

Q.—Were they carbons or identicals? A.—They were originals in each case.

Q.—But typed the same. Is that it? A.—Typed the same.

Q.—Did you ever discuss the matter at all with anybody at Columbia? A.—No, sir. I had no connection whatever, or discussion, with anybody at Columbia Hospital.

Q.—Did you conduct correspondence with Columbia as President of the Group Health? A.—I think I had two or three letters in response to mine of February 2 and perhaps the one of July 28th.

Q.—The one whom you wished to have on the staff at Columbia was Dr. Selders, wasn't it? A.—Not necessarily Dr. Selders. At that time we had no obstetrician on the staff. Dr. Selders felt himself qualified to administer or treat a limited degree of obstetrics.

Q.—Now did he get the privilege at Columbia? A.—I don't think he ever did.

Q.—Are you sure about that? A.—No, sir. I am just telling you my recollection.

Q.—Did you state on Monday that he never got any privilege in Columbia? A.—Did I what?

Q.—Did you state on Monday that Dr. Selders was not permitted to go to Columbia? A.—I perhaps did.

Q.—Why did you make that statement? A.—Well, that was my recollection.

Q.—On what was your recollection based on Monday? A.—On my memory.

Q.—Has your memory changed now, since Monday? A.—No, sir.

Q.—Will you tell the jury whether he did or did not get the privilege? A.—My answer is exactly the same as it was on Monday.

Q.—What is that? A.—That I don't recall whether he ever treated anyone there or not, but I do know that he wanted to get this limited obstetrical arrangement, as he described it.

Q.—See if I can refresh your recollection, Mr. Kirkpatrick. At the time you were writing these letters to the hospitals, and more particularly this one to Columbia, didn't you know that Dr. Selders was asking for the widest privileges for a surgeon to ask? A.—Mr. Leahy—

Q.—Yes or no. A.—No, I don't know anything about that, what he was asking for.

THE COURT:—Don't extend your answers where it is not necessary. Where you can answer yes or no, please do so, and then you may explain if necessary.

By Mr. Leahy:

Q.—Now you state in this letter of February 2 that you had before you the letter of Dec. 15, 1937, addressed to Mr. William F. Penniman. A.—Yes.

Q.—Penniman was your predecessor in office, wasn't he? A.—Yes.

Q.—And you had been looking over the file, hadn't you, to see what Mr. Penniman had done with relation to Dr. Selders? A.—I may have looked over that file. I don't know whether I looked over the file or not. I had it in my files, but I don't know whether I looked at it.

Q.—You said "I have before me your letter of December 15th addressed to Penniman." A.—That is true. It may have been in my file.

Q.—You had it before you when you were dictating this. A.—Not necessarily.

Q.—At least you had it in your mind, didn't you? A.—I wouldn't say I had it in my mind.

Q.—Where did you have it? A.—I knew that Fred Penniman had written such a letter before I came into office.

Q.—Now then in your letter—that is referring to Ashburn—you say in this letter of yours of February 2 that the Medical Board would meet on December 23 to make a recommendation with respect to the application of Dr. Raymond B. Selders for privileges of the Courtesy Staff of your hospital. A.—That's right.

Q.—Now you didn't inquire about any other doctor, did you? A.—No, sir.

Q.—So far as you knew when you wrote that letter there was no other doctor connected with Group Health who had made any application to Columbia Hospital? A.—Yes, sir.

Q.—Haven't you any recollection of the privileges for which Dr. Selders made application? A.—No, sir. I had nothing to do with it.

Q.—Didn't you look in the files in order to write this letter of February 2 for the type of privileges which Dr. Selders sought? A.—I didn't say I did—

Mr. Kelleher:—Objected to as immaterial.

By Mr. Leahy:

Q.—I asked you if you didn't know when you wrote that letter of February 2 that Dr. Raymond B. Selders had made application for the widest surgical privileges on that staff of Columbia Hospital for which a surgeon could apply?

Mr. Kelleher:—I object.

THE COURT:—He has answered it once.

By Mr. Leahy:

Q.—Well, what did you think Dr. Selders had applied for? A.—I didn't think. All I wanted of him was to be admitted to the hospital, for whatever thing he thought he could do. I had nothing to say with what he thought he could practice there. That is his business. I am a layman.

Q.—Well, why didn't you let Dr. Selders make the application? A.—Because it was necessary for everybody to help. We just regret we didn't have a hundred people trying to get them in there.

Q.—Now, in that letter on February 5 you learned, didn't you, they had failed to act on Dr. Selders' application for courtesy privileges, that is, the Medical Board, and consequently the Medical Board had made no recommendation in the matter to the Board of Trustees, Directors. A.—That is correct.

Q.—And Dr. Selders' status with relation to this hospital remains unchanged? A.—Yes.

By Mr. Leahy:

Q.—Mr. Kirkpatrick, you have been over the testimony you were going to give today, haven't you, before you took the stand? A.—Yes.

Q.—And you came down here and refreshed your recollection by going through the files of Group Health? A.—I didn't go through any files of Group Health.

Q.—Didn't you have letters presented to you so your memory might be refreshed? A.—Oh, yes. I did that. I thought you meant me going through the files.

Mr. Kelleher:—Is it pertinent to this case to have this witness testify now orally whether he wrote letters that he had testified already he wrote? Is there any point in it?

THE COURT:—The only matter, he says he didn't write any letters, has no recollection of it.

Mr. Kelleher:—Is that important to the case?

THE COURT:—It is only important in this way, this man on cross-examination may have his credibility tested, which of course involves his statements, recollection, and that sort of thing.

Mr. Kelleher:—I suggest it has no bearing upon this witness' credibility to ask him about a series of correspondence without showing him the correspondence.

THE COURT:—He is asking him the fact as to whether he had written any other letters. Proceed.

By Mr. Leahy:

Q.—You have no recollection of it now? A.—No, I haven't, Mr. Leahy.

Mr. Leahy:—Are there other letters there?

Mr. Lewin:—There are other letters here.

Mr. Kelleher:—You expect the witness to remember that and you can't even find them.

Mr. Leahy:—I didn't expect the witness to remember them.

By Mr. Leahy:

Q.—I will ask you if you remember the letter of March 3, 1938, in which Columbia Hospital advised Group Health that Dr. Selders had been given the privileges which you say he wanted to obtain? A.—No, I don't remember that letter.

Q.—You don't remember that letter? A.—Who was that letter addressed to?

Q.—Was it addressed to the Group Health or Dr. Selders? A.—I am asking the question. I don't recall the letter.

Q.—Don't you know as a fact that Dr. Selders had privileges in Columbia Hospital as a representative of G. H. A. and as

Q.—And that did disclose to you the reason why Dr. Selders' application was rejected? A.—As I recall, Mr. Leahy, they quoted a paragraph in that letter from the by-laws which referred to the necessity for membership in the Medical Society.

Q.—And it also sets forth the fact that the by-laws had been adopted in 1936, did it not? A.—I think there was reference to that date.

Q.—Now, how long was Dr. Selders with you after that time? A.—He remained until January 1939.

Q.—You asked for his resignation at that time? A.—Yes.

Q.—You were on the Board and president of Group Health at that time? A.—I wasn't president; I was on the Board.

Q.—By the way, when did you first go on the Board of Group Health? A.—In April 1937.

Q.—And when was it Dr. Brown was employed? A.—In June 1937; I think June 7th.

Q.—Now, to return to Sibley Hospital, some time was it in June you had a series of letters interchanged between the two, with reference to the payment of some money for some patients of Group Health? A.—Yes. I will accept that date. We had two or three members in attendance at Sibley Hospital, and those patients were discharged. In the regular course of things we tendered our check in payment for the services there and in all three cases the checks were declined, and the correspondence grew out of the declination of those checks.

Q.—Did anybody on the legal staff, any of those whose names were on the petition you filed, consult with you with reference to those letters? A.—No, sir.

Q.—Did any of them consult with you with reference to the letters written to the Sibley Hospital? A.—No, sir, not one.

Q.—Do you recall a letter which was introduced, addressed to Dr. Neill? A.—That I wrote.

Q.—Did you write that? A.—Yes.

Q.—Anybody consult with you about that letter? A.—I think I had some help in the formation of that letter.

Mr. Lewin:—Now, there are two letters. Identify the letter. Only one got in evidence.

Mr. Leahy:—Well, the letter that was received in evidence.

THE COURT:—You better show him the letter.

Mr. Leahy:—The letters are Exhibits 458 and 459. Do you remember the first letter you wrote to Dr. Neill?

The Witness:—Now, Mr. Leahy, there were two letters and I don't know which I wrote first. If I saw the letter I might tell you.

Mr. Leahy:—All right. We will get it.

Q.—While you are looking for that, I believe I forgot to ask you about George Washington Hospital. You wrote a letter also to George Washington, did you not? A.—I think that was included in the February 2nd letter.

Q.—And you received a notification from George Washington Hospital that they couldn't grant the privileges for Dr. Selders, for those for which he applied? A.—I think so.

Q.—Did you follow that up to find out why they could not do so? A.—No.

Q.—Did anybody for you? A.—Nobody that I ever heard of.

Q.—Now, I will show you what has been identified as Government Exhibit 458, dated March 21, 1938. Now, who was it helped you formulate that letter?

Mr. Lewin:—He has not said anyone helped him yet.

The Witness:—This is not the letter that I had the help on.

Q.—You wrote that without any help? A.—Yes.

Q.—Your recollection is that this is not the letter on which you had help? A.—The letter I had help on is the letter in response to Dr. Neill; somewhere about this time.

Q.—This one you wrote without any assistance from any member of the legal staff whatsoever? A.—Yes.

Q.—And this has reference to Dr. Price? A.—Yes, he was the doctor involved in that question.

Q.—How long was it that Dr. Price was on the staff? A.—Well, he came there shortly after we commenced operations and remained until some time in 1939.

Q.—Did he retire before you retired as president? A.—No, he retired after I retired.

Q.—Don't you remember that you had a controversy with Dr. Price while you were still president?

Mr. Lewin:—We object to it. It is beyond the scope of proper cross-examination; also immaterial.

THE COURT:—Yes, it would be unless it is for the purpose of refreshing his recollection.

By Mr. Leahy:

Q.—Do you recall when that occurred? A.—Now, if you characterize it as a controversy; I should say I had no controversy with him at any time. I had some discussion with Dr. Price.

Q.—Do you recall when that occurred? A.—Just toward the end of 1938.

Q.—Does that refresh your recollection now as to when Dr. Price retired? A.—No.

Q.—It does not? A.—No, because Dr. Price attended the meeting of the Board of Trustees, which was the last meeting I presided over as president, and I know he was on the staff long after that.

By Mr. Leahy:

Q.—You knew, of course, that Sibley had a rule which required any doctor practicing in Sibley Hospital to be a member of the staff there? A.—Well, I presume they had that in common with every hospital in Washington.

Q.—You knew that before a doctor could practice he had to be a member of the staff? A.—Yes.

Q.—In the month of February you knew that Dr. Selders didn't have privileges in Sibley Hospital? A.—Right.

Q.—And some time before February 5th, you had sent a check to Dr. Taylor, hadn't you? A.—Yes.

Q.—And Dr. Taylor was then the superintendent, in charge of Sibley Hospital? A.—I think he was the president.

Q.—And you had received a letter, had you not, from Dr. Taylor, stating that Miss Tommie Lee Nix, on Sept. 4, 1937 was admitted "to this hospital on service of Dr. Rush Conklin; later she was transferred to the service of Dr. Little, and was then operated on by Dr. Cobb. On her admission card responsibility for the payment of her bill is assumed by" over the signature of James R. Nix. Do you know who he was? A.—I assume her brother.

Q.—"And we look to him for settlement of this account"? (showing document to the witness). A.—Right.

Q.—That is Dr. Taylor's statement to you as the reason for returning the check? A.—Yes.

Q.—Did you have any correspondence from Dr. Taylor before in the case of anyone who went to the hospital? A.—No, sir.

Q.—Had anybody at your request? A.—No, sir.

Q.—So that Miss Nix had gone into Sibley, so far as Dr. Taylor was concerned, from his letter, without any knowledge on the part of the hospital authorities that Group Health Association was going to hold itself responsible for payment of the bill? A.—I don't understand that to be the situation at all.

Q.—Didn't you understand when you were told that Mr. Nix was going to be held responsible for the bill that the hospital was not looking to Group Health for its payment? A.—I understand that statement, but I don't agree with it.

Q.—So you sent the check back again, didn't you? A.—I sent it back two or three times.

Q.—Why didn't you accept Dr. Taylor's statement, as contained in his letter, that the hospital was looking to Mr. Nix for the payment of the bill? A.—Because I wanted to establish the fact that we could pay that bill with our own check.

Q.—That was the purpose of that? A.—Yes.

Q.—Did you have some correspondence with Mr. Paul B. Cromelin about that? A.—Not about that question; I wrote him a letter.

Q.—You knew Mr. Paul B. Cromelin was counsel for the Sibley Hospital, did you not? A.—I didn't know that.

Q.—Did you know he was an attorney? A.—I knew he was an attorney when I got his letterhead which indicated it.

Q.—You hadn't talked with him over the telephone about this matter? A.—No, never spoke to him.

Q.—Do you know whether anybody on behalf of G. H. A. had spoken to him? A.—Not that I know of.

Q.—When you got his letter which indicated that he was an attorney, did you try to get hold of him? A.—No.

Q.—Why were you so insistent on the hospital accepting this check, when you knew that the credit had been extended to Mr. Nix and not to Group Health. A.—Because, Mr. Leahy, we felt we had the right to discharge the liability, which we regarded as ours, and we wanted to establish the fact that we had full right to have that hospital accept our check, just as other hospitals had.

Q.—What other hospitals had? A.—Every other hospital that we sent our check to.

Q.—Then other hospitals did accept your check? A.—Yes.

Q.—That was the only hospital you had a difference with? A.—Yes.

Q.—Why was it that you didn't get the cash in the first place as you did finally? A.—We wanted to establish that we had a check drawn for this thing, I think you will agree, a check is the best evidence of payment of a bill.

Q.—Did you doubt that the Sibley Hospital would mark the bill "Paid" if it got cash? A.—We didn't care how they marked the bill. What we wanted was to have their endorsement on our check.

Q.—Was it that you were just trying to build up the record against Sibley, who wouldn't accept your check? A.—No, nothing in the world like that. I may say that during this time that this correspondence was going on we received a solicitor from Sibley for a contribution.

Mr. Leahy:—Well, that isn't necessary to go into that.

Mr. Kelleher:—Why not. Let him answer.

Mr. Lewin:—He says that during that time Sibley sent a solicitor there.

The Witness:—We were simply trying to establish the validity of our tendering a check and have them accept it.

Q.—You were trying to make Dr. Taylor at Sibley receive your check? A.—Yes.

Q.—And he had told you some one else was responsible and you knew that the fact of such responsibility was evidence by this notation on the card at the time the patient was admitted. Dr. Taylor had so informed you? A.—That is what he said.

Q.—Do you recall now how many letters you wrote in that regard? A.—Two or three.

Q.—You didn't get any advice from anybody about that? A.—None whatsoever.

Q.—Never talked with Mr. Russell about that? A.—No.

Q.—Or with any one of your legal staff? A.—No.

Q.—Who was it suggested "legal tender"? A.—What do you mean by "legal tender"?

Q.—Legal tender. A.—I thought of it as a final solution of the question. We didn't want to keep on sending this check back and forth indefinitely.

Q.—That was the first reference to that, February 24—February 5, instead of February 24—this was sent, and then you followed that up with your letter of February 18, Exhibit 418, and you said in your letter in response to Dr. Taylor's statement that he considered the check was evidently sent in error, that you wanted him to know that there was no mistake on your part in transmitting the check in question. Is that so? A.—Yes.

Q.—So you wrote him this letter in which you said "Under the provisions of the by-laws of Group Health, Inc., Miss Nix is entitled to have provided to her hospitalization, when such is necessary. Miss Nix, having received hospitalization in your institution for the dates mentioned is therefore entitled to have the cost of that hospitalization paid for by Group Health, Inc."

"Your attention is invited to the fact that the stub which contains the notation referred to is not in any sense a part of the body of the check. The stub is provided only for the information of the payee as to what the check is entitled to cover. In depositing the check, if you so desire, the stub, of course, may be detached before the check is deposited."

"We are therefore returning the check to you and ask that it be deposited in the usual course."

Now, did he answer that letter? A.—I think he sent the check back again.

Q.—Under date of February 21, is that right? A.—Yes.

Q.—And again, didn't he call your attention to the fact that she signed her own card, and that card has the name of her brother, James R. Nix, as the person who would be responsible for her bill? A.—Yes, but we didn't consider him responsible for the bill; we considered ourselves responsible for it.

Q.—So you were going to compel Sibley to accept your check, if you possibly could? A.—Not compel them, get them, if we could.

Q.—Then you sent them a check back a third time? A.—We finally settled it.

Q.—Why didn't you send the cash in the first place? A.—We wanted a record to show that we had paid the bill.

Q.—What final record did you get out of it? A.—None.

Q.—Didn't you get a record that you paid cash? A.—We didn't from Sibley Hospital.

Q.—Didn't you have a Group Health record of the fact that you had paid this bill? A.—We have a record in our cash book, but we have no evidence from Sibley that we paid the bill.

Q.—Well, you have the record that the bill is paid, do you not? A.—We have a record that we gave the money to somebody at Sibley, but we have never received from them a receipt.

Q.—Did you ask for a receipt? A.—We certainly did.

Q.—Who was it that made the payment? A.—My secretary, Ben Jones.

Q.—Is he still in Washington? A.—I don't know.

Q.—You haven't seen him since you came here this time? A.—I haven't seen him for two or three years.

Q.—Now, didn't you ever talk with Dr. Taylor as to why he didn't want to take them? A.—I never talked with him in my life.

Q.—You didn't know that Mr. Cromelin had advised Dr. Taylor to write you as he did? A.—I didn't, and I didn't care what advice he had given him.

Mr. Lewin:—I object to this line of questioning. It is just redundant and time-consuming.

THE COURT:—I think it has been covered.

By Mr. Leahy:

Q.—I just want to know, he said the general topic, the conversation took a half an hour. What was it you were discussing? A.—I will tell you one thing. I asked Mr. Mitchell and repeated it three times if it were a fact that every member of the staff of Emergency Hospital was a member of the District Medical Society, and he replied each time in the affirmative; at the same time I knew that was in error. That is why I asked that.

Q.—What was the error? A.—It was in the case of Dr. McCready. He was on the staff, but he was not a member of the Medical Society.

Q.—How do you know he was on the staff? A.—Because he showed me a letter appointing him to the staff a week before that. That was in early spring of 1938, when he was serving as a refractonist for Group Health.

Q.—That is interesting; then you did have a man from Group Health on the Emergency Hospital staff? A.—No, he was on a fee basis for us. We paid him \$5 per case.

Q.—Do you mean that Dr. McCready was not employed by you? A.—I mean he was not a member of our staff.

Q.—Well, we won't quibble about words: was he under employment by Group Health? A.—He was employed to refract eyes at \$5 a case during that emergency.

Q.—Employed by whom? A.—Group Health.

Q.—And at that time he was a member of the staff of Emergency Hospital? A.—Yes.

Q.—Did you tell Dr. Mitchell that you did have a member of your association on the hospital staff there? A.—No.

Q.—You didn't; why? A.—Because he was not a member on our staff.

Q.—You didn't consider him a member of your staff? A.—No, neither did we consider any physicians we employed on a fee basis.

Q.—Did you tell Dr. Mitchell he was on a fee basis with your staff? A.—I never mentioned Dr. McCready to him.

Q.—Did you know he was not a member of the District Medical Society? A.—He told me he was not.

Q.—Did you know of your own knowledge that he was not? A.—No, sir.

Q.—Then your information that Dr. Mitchell was in error is based on something he told you? A.—I think he is the best evidence. He ought to know.

Q.—Did you ever make inquiry of the District Medical Society to determine that? A.—I didn't; I accepted his word.

Q.—Were there any other physicians you had on a fee basis who had staff privileges? A.—There may have been. I remember Dr. Eckelby as one, and Dr. Warfield, who I think is a defendant in this case. And there was Dr. Ledbetter. We didn't inquire whether they were members of this, that or the other thing. They did their work and we paid them.

Q.—About how many did that work? A.—I should say there were six or eight, perhaps a dozen of them.

Q.—And that was work for which the clinic was not equipped? A.—No, sir, we were equipped for that work.

Q.—Who would do the work that Dr. Ledbetter was engaged to do? A.—I couldn't say.

Q.—Think it over; you were president for a year and a half. A.—I could think it over but I wouldn't know.

Q.—You are familiar with the work the various surgeons or physicians did, are you not? A.—You are asking me to tell you who on the staff could do the work that Dr. Ledbetter did. I don't know. I didn't get into this medical question at all.

Q.—You said you were obliged to hire Dr. Ledbetter? A.—We were.

Q.—Now, isn't Dr. Selders the only surgeon you had? A.—Yes, for general surgery. Dr. Halstead is also a surgeon, for minor surgery.

Q.—Did you have anybody for orthopedic work? A.—Not that I know of.

Q.—What kind of work did Dr. Ledbetter engage in? A.—I don't know. All I know is we paid him for services performed, and I know that because I signed the check.

Q.—All you know is you paid the bill to various doctors? A.—Yes, that is all.

RE-DIRECT EXAMINATION

By Mr. Lewin:

Q.—I hand you the roster of the Medical Society members of the District of Columbia, which is Exhibit 32, and ask you to look that over; and ask you to see if you can find the name of Dr. McCready on that list?

Mr. Leahy:—It speaks for itself.

Mr. Lewin:—It speaks loudly against your point.

The Witness:—I looked under the "M's." I don't find his name there. Do you want me to look all the way through it?

By Mr. Lewin:

Q.—No. After you had your conversation with Mr. Rogers of the Casualty Hospital, you say at that meeting Mr. Rogers told you that they had a rule in effect that they could not accept on their courtesy staff non-members of the District of Columbia Medical Society? A.—He said it was first of the by-laws.

Q.—After that didn't he tell you to submit another application to Dr. Selders? A.—You mean verbally, or by correspondence, or by what? I think there was a letter later on in which he either enclosed an application or asked for it.

Q.—I show you Exhibit 403 and ask you if this is Dr. Rogers' letter to you of Aug. 2, 1938. A.—It is.

Q.—And didn't he say in that letter if Dr. Selders will submit a further application that it will receive consideration? A.—Yes.

Q.—Is there anything in that last communication indicating that there was some iron-clad rule which would prevent the doctor from receiving staff privileges notwithstanding he was not a member of the Society?

Mr. Leahy:—I submit it speaks for itself.

The Witness:—There certainly isn't.

TESTIMONY OF MARY FRANCES STUART MAURY.

DIRECT EXAMINATION

By Mr. Lewin:

Mary Frances Stuart Maury said that in 1937 she was Miss Stuart. In November 1937 she was laboratory technician for Group Health. She was graduated with an A.B. degree, majored in science, after which she took a year's course at the University of Virginia Medical School as a laboratory technician. In November 1937 she was taken ill.

Q.—Will you tell the jury the circumstances of your becoming ill? A.—I was awakened in the morning about 6:30 with severe abdominal pain, and I got up out of bed and fainted.

Q.—Do you know how long you remained unconscious? A.—No.

Q.—Could you tell us what you did on regaining consciousness? Did you ask for a doctor? A.—Miss Lewis, who was the chaperon at the house where I lived had called and—

Mr. Leahy (interposing):—We object to the conversation.

By Mr. Lewin:

Q.—All right. My question was, did you ask for a doctor when you came to?

THE COURT:—A better question would be to ask her if she finally got a doctor.

The Witness:—Shall I answer that?

Mr. Lewin:—Yes.

The Witness:—Yes, Miss Lewis had called her personal physician, Dr. Birdsall. After he had already been called, Miss Lewis asked me about a doctor and I specified Dr. Allen E. Lee, on the staff of Group Health.

By Mr. Lewin:

Q.—And did Dr. Lee come there? A.—Yes.

Q.—How soon after you asked for him would you say? A.—Very soon.

Q.—And did he make an examination of you? A.—Yes.

Q.—What did he do as a result of that examination? A.—He recommended that I be taken to the hospital.

Q.—Did you suggest which hospital you preferred? A.—Yes.

Q.—Which one was it? A.—Garfield.

Q.—Were you taken to the hospital? A.—Yes.

Q.—Were you taken there in an ambulance? A.—Yes.

Q.—And about what time would you say you arrived at the hospital? A.—I think it was around ten.

Q.—Did he tell you that an operation would be necessary?

Mr. Leahy:—I object to what he told her.

THE COURT:—She may answer that.

Mr. Lewin:—Did he tell you whether any operation would be necessary?

The Witness:—He thought before I left home, he told me before I left home an operation would be necessary.

By Mr. Lewin:

Q.—And did you engage a surgeon or leave that to him? A.—I left it to him.

Q.—And did you know who the surgeon would be when you left your house to get in the ambulance to go to the hospital? A.—No.

Q.—After you arrived at the Garfield were you taken to a room and put to bed? A.—Yes.

Q.—And then did a doctor come in to see you? A.—Yes.

Q.—When, with reference to the time you arrived at the hospital? A.—It seemed rather long to me; I don't know exactly how long it was.

Q.—Was any treatment given to you while you were awaiting your doctor? A.—Not that I recall.

Q.—When the doctor finally came, who was he? A.—Dr. Schoenfeld.

Q.—Is that Dr. Herbert H. Schoenfeld? A.—Yes.

Q.—And did he then give you any treatment? A.—I had an injection before I was taken to the operating room.

Q.—Yes, but did he give you any treatment after examining you? A.—No.

Q.—Did he give you that treatment after he came back? A.—I don't recall.

Q.—How long after he left the room was it before he returned? A.—I imagine it was around an hour. I am very vague about the time.

Q.—And who came in with him, if anybody, when he returned?

A.—An assistant. I don't recall his name.

Q.—And were you later operated on? A.—Yes, sir.

Q.—Who performed the operation? A.—I was told Dr. Schoenfeld.

Q.—Can you tell us about when the operation took place?

A.—Sometime after noon.

Q.—Would you say it was in the early afternoon or the late?

A.—Early afternoon.

Q.—You would say it might have been as early as 12:20?

A.—I had no idea of the time.

CROSS EXAMINATION

By Mr. Leahy:

Q.—I have only this one question. If it should become necessary, would you be willing to let Dr. Schoenfeld tell the Court and jury what he did that day? A.—Yes.

Q.—I am going to tell you why: you have a right under the law to refuse to permit a doctor to tell of his treatment of you.

Mr. Lewin:—It has already been covered by a written waiver, which I hold in my hand, signed by Mrs. Maury.

Mr. Leahy:—I just wanted to know, if we called him, would you object or would you be willing to have him testify. A.—I would be willing.

Q.—You were not a member of Group Health? A.—No.

Q.—You were just an employee? A.—Yes.

Mr. Lewin:—As a matter of fact, is this your signature to a waiver permitting Dr. Schoenfeld to testify concerning your operation. A.—Yes.

TESTIMONY OF DR. ALLEN E. LEE

DIRECT EXAMINATION

By Mr. Kelleher:

Allen E. Lee said he is a Doctor of Medicine, and limits practice to diagnosis and internal medicine. He obtained his doctor's degree at the University of Michigan in 1930. Then he took some postgraduate work at Ohio State until 1932. In 1931 he was at Cleveland; in 1932 at Columbus. He was chief resident at the University of Ohio. It was in the University of Ohio State Hospital, or Starling-Loving. Then he went back for some time to Ann Arbor and came to practice in Washington in 1934. He became associated with the Medical department at Georgetown as instructor in medicine.

Q.—While you were with Georgetown did you also have any classes for nurses? A.—I had, I think, for one year, a course in Materia Medica with the nurses there. I started a course with them; and then I taught some classes at Garfield Hospital.

Q.—When you came to Washington did you join the Medical Society of the District of Columbia? A.—I joined it in 1934 or 1935, I think, at the time I started practicing.

Q.—Now, Dr. Lee, did you join the staff of G. H. A. or Group Health Association, Inc., in the latter part of October,

1937? *A.*—Well, I believe I did. I am not exact about the date, but I believe I joined the clinic in 1937, the latter part of the year.

Q.—Were you on the staff of Group Health Association when the clinic opened up on I Street? *A.*—When it opened I was affiliated with the clinic.

Q.—Dr. Lee, do you know, or did you know, Miss Mary Frances Stuart? *A.*—Yes, sir.

Q.—Was she a patient of yours on Nov. 18, 1937? *A.*—I don't recall the exact date, but she was a patient of mine shortly after I was with the clinic.

Q.—Will you describe to the jury the circumstances surrounding your treatment of her?

Mr. Levin:—You might care to see this waiver of Mrs. Maury.

THE COURT:—The doctor may understand that he is at liberty to testify.

The Witness:—Then I can refer to her record, I believe?

THE COURT:—Yes.

By Mr. Kelleher:

Q.—You are referring to a record which you made contemporaneously with the treatment? *A.*—Yes. It is my custom to keep a record of my patients in private practice. I saw Miss Mary Stuart on Nov. 18, 1937. I have a record here of the time. It was at 7:30 a. m.

Q.—In the morning? *A.*—Yes; 7:30 in the morning. After going over her carefully I made a diagnosis of one of two possibilities which I indicated as an acute appendix, possibly rupture, or possibly a ruptured ovarian cyst, with hemorrhage. That was my working diagnosis at that time. She was in shock, surgical shock, and had a surgically acute abdomen.

Q.—What do you mean by surgical shock? *A.*—It is rather a complex term to explain in layman's language. It means a condition in which a patient's bodily functions have more or less collapsed; the circulation, and possibly involving blood pressure and heart function, cerebral function.

Q.—Is it a serious condition? *A.*—We consider it serious.

Q.—May a patient die from shock alone? *A.*—It depends on the type of shock. A shock is usually considered a critical thing.

Q.—Take the type of shock she was suffering from: was that serious enough to induce death? *A.*—Well, ruptured internal viscus produces shock. It does not necessarily produce death within a short length of time. It is not as bad as a traumatic shock or a shock following an accident.

Q.—Will you tell us what instructions you gave for the care of Miss Stuart? *A.*—As I recall it, referring to the record here, I got in touch with Dr. Brown, who was director of the clinic. I simply referred the matter to him, because Miss Stuart was a member of the personnel, and he stated—

Mr. Leahy:—I object

THE COURT:—Yes. I would not go into the conversation.

By Mr. Kelleher:

Q.—Did you order Miss Stuart sent to the hospital? *A.*—I put an order in to have her transmitted to the hospital by ambulance as soon as possible, after I spoke to Dr. Brown.

Q.—To what hospital? *A.*—Garfield Hospital.

Q.—Did Miss Stuart suggest any surgeon? *A.*—Miss Stuart was more or less in a semistuporous condition at the time.

Q.—I do not think I asked you this. Did you conclude, as a result of your diagnosis, that an operation was necessary? *A.*—Well, my opinion was that surgery was indicated as soon as possible.

Q.—And you are not a surgeon, of course. *A.*—No, sir.

Q.—As a result of your conversation with Dr. Brown was a surgeon selected? *A.*—Following Dr. Brown's suggestion she voiced a request for a surgeon, and that surgeon was called.

Q.—Who was that surgeon? *A.*—Dr. Schoenfeld.

Q.—Who called Dr. Schoenfeld? *A.*—I did.

Q.—What did you tell him? *A.*—I described the problem involved and told him I thought the patient was in serious condition and I would appreciate his seeing the patient as soon as possible.

Q.—Did you tell him what your diagnosis of the patient was? *A.*—I told him exactly in the words that I have just described in the working diagnosis.

Q.—Will you tell us what transpired after you had contacted Dr. Schoenfeld? *A.*—I talked to Schoenfeld and was to meet him at some designated time, which I do not recall at this moment, as early as possible, at the hospital.

Q.—Continue. *A.*—When I arrived there—I don't recall just what time it was—I met Dr. Schoenfeld coming down the hall

toward me, and of course my first question was if he had seen the patient, and from his remarks I gathered that perhaps—

Mr. Leahy:—I object to any conversation.

By Mr. Kelleher:

Q.—Tell us what you said to Dr. Schoenfeld and what he said to you.

Mr. Leahy:—I object to that.

Mr. Kelleher:—May we approach the bench on this, your Honor?

THE COURT:—Yes.

(Counsel for both sides approached the bench.)

By Mr. Kelleher:

Q.—Did Dr. Schoenfeld operate upon Miss Mary Frances Stuart? *A.*—Yes, sir.

Q.—Were you present when the operation occurred? *A.*—I was there when the operation occurred.

Q.—What did the operation show as to her illness? *A.*—It showed cystic tumors of both ovaries and tubes, with hemorrhage.

Q.—With hemorrhage? *A.*—Yes, The right ovary was ruptured, accompanied by hemorrhage.

Q.—Is that a serious condition, Doctor? *A.*—Well, it is not such that it will cause death immediately. It is serious, because it is a ruptured viscus.

Q.—Was the matter of the hemorrhage serious? *A.*—Well, if there was the amount of hemorrhage when the patient was on the operating table one would not say it was serious, but clinically a ruptured viscus is usually considered a serious diagnosis.

Q.—Doctor, prior to your joining Group Health Association did you notify the Society that you intended to resign? *A.*—I think I did.

Q.—Do you know what date that was? *A.*—No, sir.

Q.—I show you what has been introduced in evidence as U. S. Exhibit 41 and ask you if that is your letter of resignation to the Society, dated Oct. 30, 1937? *A.*—Yes, sir.

Q.—Do you recall, after you resigned, whether you were cited by the Compensation, Contract and Industrial Medicine Committee of the Society? *A.*—Well, I don't know what you mean by that word "cited."

Q.—Will you tell what happened? *A.*—I received a letter stating that—calling my attention to the fact that I was to be taken up before the committee, or that my standing was to be taken up before the committee, in consideration of the contract which I was to have had with Group Health.

Q.—Do you know what date that was? *A.*—I don't recall the date.

Q.—I show you Exhibit 39 and ask you whether that is the letter which you received from the defendant Hooe, dated Nov. 2, 1937? *A.*—Yes, sir; that is it.

Q.—After you had received this letter, Exhibit 39, did you talk on the telephone with the defendant Hooe? *A.*—I recall having several conversations with him on the telephone.

Q.—Did you discuss with him the matter of your resignation from the Society? *A.*—I believe I notified him that I had sent a letter of resignation in, and that therefore perhaps I was not subject to any call by his committee.

Q.—And what did the defendant Hooe say? *A.*—I don't recall that.

Q.—After you had received this notification from the C. C. & I. M. Committee, did you receive any other notification to appear before the Executive Committee of the Medical Society? *A.*—I think I did.

Q.—Did you have any hearing before the C. C. & I. M. Committee? *A.*—Well, I recall having no hearing until the very last night, at which time I enclosed my resignation from Group Health.

Q.—That was after the hearing of the Executive Committee started? *A.*—Yes, sir.

Q.—You say you had no hearing before the C. C. & I. M. Committee before the first night of the hearing before the Executive Committee? *A.*—That was the only hearing I recall being in. It was the Executive Committee, I believe, in joint session with the Contract Committee.

Q.—I want to be sure. What is your answer to my question as to whether or not you had any hearing before the C. C. & I. M. Committee before Dec. 6, 1937, the date of the first meeting of the Executive Committee? *A.*—Is that the date of the Executive Committee hearing?

Q.—Yes. *A.*—I did not.

Q.—Did you attend the first hearing of the Executive Committee on December 6? *A.*—Well, I won't say about the date, but I did attend the first hearing of the Executive Committee.

ORGANIZATION SECTION

1254

Q.—What occurred at that hearing? A.—Well, it was a hearing at which I appeared to explain, as I recall now, the contract at issue between me and Group Health.

Q.—When you say you appeared, what do you mean? Did you testify? A.—I was called before the committee to explain a contract that I was supposed to have had between myself and Group Health Association.

Q.—Who examined you before the committee? A.—Well, now, I don't understand that.

Q.—Who asked the questions? A.—It seemed that the entire group asked questions.

Q.—Was the committee represented by attorneys? A.—Yes, sir.

Q.—Did any attorney question you? A.—Yes. I believe I was questioned by attorneys.

Q.—Who was the attorney? A.—Offhand, I recalled Mr. Hoover doing a lot of questioning that evening.

Q.—Do you recall Mr. Leahy, this gentleman over here (indicating)? A.—I believe he was there that evening, but I don't recall his questioning me.

Q.—After you had testified on December 6, and before Friday, December 10, did you see the defendant Hooe or talk with him over the telephone? A.—I believe I had one conversation with him on the telephone between those two dates, the first one being the date at which I appeared before the committee.

Q.—That is, December 6? A.—I believe that was the first date; and the second date being the night of my resignation. Is that correct?

Q.—That would be December 10. A.—December 10. I had a telephone conversation with him, during which he stated that proceedings would be dropped or that my standing would be unaffected in the Society should he have a copy of my resignation by a certain time that evening.

Q.—Resignation from what? A.—Group Health.

Q.—Did he call you or did you call him? A.—I believe I called him.

Q.—Did you attend a meeting at the Medical Society Building on December 10? A.—I attended as a member in good standing of the Society; yes. I enclosed my resignation from Group Health.

Q.—Will you tell us how and where you announced your resignation? A.—I don't recall the details, except that on that evening I appeared as per request to continue with the hearing, and my resignation had already been submitted to Dr. Brown. A copy of it had been sent, I believe, to Dr. Hooe. And I met Dr. Hooe, who requested that I stop in before the Contract Committee and that he would announce that all proceedings would be dropped.

Q.—Did you go in before the C. C. & I. M. Committee? A.—Yes; I believe it was that committee—in one of the ante rooms of the Medical Society.

Q.—Did Dr. Hooe make the announcement which you suggest? A.—I recall that he did.

Q.—What did he say, in substance? A.—He simply stated that proceedings were dropped and that my standing was unaltered, in accordance with the fact that he had notice of my resignation from Group Health, or words to that effect. I can't give you the exact wording.

Q.—Did you notify Dr. Brown by letter that you had resigned from G. H. A.? A.—I gave Dr. Brown a letter personally.

Q.—Was that on December 10, the night of the second hearing? A.—I think it was on the afternoon of the same day.

Q.—I show you Exhibit 60 and ask you whether or not it is the original or a carbon copy of your resignation which you said you gave Dr. Brown? A.—That is a copy of the letter, I believe, that I gave Dr. Brown.

Q.—Did you enclose a copy of the letter to Dr. Hooe, dated Dec. 10, 1937? A.—Yes, sir. That is the original.

Q.—Now, Dr. Lee, did you receive a communication from the defendant Hooe notifying you that you were a member in good standing, in view of your resignation from Group Health Association? A.—Well, I don't recall whether I received a memorandum to that effect.

Q.—May I show you Exhibit 61 and ask you whether you received the original of that document. A.—I believe I did get the original.

CROSS EXAMINATION

By Mr. Leahy:

Q.—With reference to Miss Stuart, do you recall about what time it was that you first received word to go to her? A.—I don't recall the exact time. I have a note on her chart that I saw her about 7:30 in the morning.

Q.—And then you got in touch with Dr. Brown? A.—I got in touch with Dr. Brown first.

Q.—And Dr. Brown suggested the name of Dr. Schoenfeld? A.—Yes.

Q.—Yes, sir.

Q.—Then you got in touch with Dr. Schoenfeld? A.—Yes.

Q.—Have you any idea what time Miss Stuart got to the hospital? A.—I have no idea, but there must be a record on her hospital chart.

Q.—Do you recall the time you got to the hospital? A.—Well, I must have gotten there—I don't recall exactly—

Q.—Some time before 12 o'clock? A.—Oh, yes.

Q.—Would you say it was around 10 o'clock? A.—It is difficult for me to state the exact time, so I would not commit myself on that. I recall coming into the hospital at such time as Dr. Schoenfeld was coming down the hall, and we both met. My impression was at the time that he had seen the patient and knew something about her; and from then on we had our contact.

Q.—Some time has to elapse in the preparation for an operation? A.—Yes, sir.

Q.—The operating room has to be gotten in order; the patient also has to be gotten in order for the operation? A.—Yes.

Q.—Do you recall what time the operation was performed? A.—I have the time of it on my chart.

Q.—Will you tell us that? A.—I have here a note that she was operated on at 11:30 a. m.

Q.—Is that—well, you said you did not know about what time you got to the hospital. But she was operated on at that time? A.—Yes.

Q.—You found that generally your diagnosis was correct, did you not? A.—Yes, sir.

Q.—Was there a good deal of hemorrhage? A.—I don't know what the surgical note states, but my note states that there was hemorrhage in the pelvic cavity. As to the amount I do not have a note here; but as I recall, she had hemorrhage of such volume as would have endangered her life.

Q.—Just a couple of questions about those two dates of December 6 and December 10. You appeared at the first hearing which was held December 6, did you not? A.—Yes, sir.

Q.—At that time you tendered your resignation, effective as of November 1; is not that right? A.—I believe that letter is dated.

Q.—That was dated October 30? A.—Yes.

Q.—In other words, at that time, October 30—am I right on that October 30?

Mr. Kelleher:—That is correct.

By Mr. Leahy:

Q.—On October 30 you had made up your mind to resign from the Medical Society? A.—Yes.

Q.—And I presume you came to your conclusion, did you not, after deliberation and after weighing the pros and cons? A.—I arrived at that conclusion feeling that perhaps I ought to avoid a lot of time in controversy that might have elapsed later.

Q.—Did you discuss the matter among your friends or take advice on the matter before you came to your conclusion? A.—That conclusion was made unadvised.

Q.—Your own good judgment? A.—My own good judgment.

Q.—On December 6 had you in the meantime recalled that resignation in any way? A.—I recall that I had probably made an attempt at recalling it, since there was no action carried out on that letter of resignation.

Q.—Do you recall in what shape you had attempted to recall it? A.—I believe a letter was sent to that effect.

Mr. Leahy (addressing Mr. Kelleher):—Have you got that letter?

Mr. Kelleher:—Yes (handing a paper to Mr. Leahy).

By Mr. Leahy:

Q.—I now show you a letter, Doctor, which is dated Nov. 11, 1937, and it is Exhibit 43. Do you remember writing this?

A.—Yes, sir.

Q.—Was that your dictation or somebody else's? A.—That was my dictation.

Q.—At whose suggestion? A.—Well, after having had a conference as to what we ought to do about the letter of resignation.

Q.—With whom did you confer? A.—Offhand, at this time I don't recall. I believe Mr. Penniman and Mr. Zimmerman probably talked it over.

Q.—Did you have any legal advice? A.—There might have been some legal counsel there with us at the time.

Q.—Did Mr. Russell advise you about this letter? A.—I don't recall exactly.

Q.—But you do recall some lawyer there? A.—There were lawyers there with us at the time.

Q.—Did the lawyers make the set-up of the letter? A.—Well, I think perhaps that letter was to a great extent my own suggestion.

Q.—Did the thought come from this conference that you had with Mr. Penniman, Mr. Zimmerman and the lawyers? A.—I cannot say that now. We all talked it over.

Q.—Do you recall whether any of the lawyers for Group Health were present at the hearing on December 6? A.—I believe we had quite an imposing array of lawyers there.

Q.—You had some four or five, did you not? A.—Yes.

Q.—You had Mr. Russell there? A.—Mr. Russell.

Q.—And Mr. York? A.—I believe Mr. York was there.

Q.—Any others that you recall? A.—I don't recall the names.

Q.—But there was an imposing array? A.—Yes.

Q.—It looked a bit like the Supreme Court around there at that time, did it not? A.—With all the Executive Committee members and the lawyers it looked like it.

Q.—Then the next hearing was on December 10, was it not? A.—December 10.

Q.—And were the same lawyers present on December 10? A.—Practically the same crowd was there.

Q.—Had you attended any sort of a trial before? A.—What do you refer to? A trial outside—

Q.—Where you testified in court? A.—Yes; I have testified before.

Q.—And the Executive Committee was sitting there as a group of judges, and the lawyers on one side would ask questions and the lawyers on the other side would ask questions? A.—They were sitting there, it seemed to me at the time, as a combination of judge, lawyer, district attorney—a pretty complete group of itself. They all seemed to ask questions, which of course I felt was a little bit—

Mr. Kelleher:—You mean, the committee?

The Witness:—Yes.

By Mr. Leahy:

Q.—Were the lawyers for Group Health also asking questions? A.—I believe they asked questions, but we did not have much opportunity to explain.

Q.—Were they asking questions? A.—Yes.

Q.—And the lawyers for the committee also were asking questions? A.—Yes. Mr. Hoover asked plenty of questions.

Q.—And there were arguments on both sides, pro and con? A.—Yes. It got pretty warm.

Q.—And that was the meeting on December 10, was it? A.—That was the first meeting. I don't know what the date was.

Q.—You did not attend the December 10 meeting at all? A.—No, only as an observer, which was a little bit cooler.

Q.—Did you also consider, on September 8 or 9, when you tendered your resignation, the fact that you should resign from Group Health? Was that your deliberate judgment? A.—The resignation from Group Health was my own deliberate judgment.

Q.—Did you take advice from any lawyers in reference to that? A.—No. I arrived at that conclusion myself.

Q.—You weighed the pros and cons in the matter, did you? A.—It was my own conclusion.

Q.—And you came to the conclusion that you ought to resign; is that right? A.—I arrived at the conclusion because it seemed to me that I was wasting a good bit of time in a controversy that I could devote to my own practice of medicine, taking care of sick folks.

Q.—Did you weigh that thought over against the experience also that you had had in Group Health? A.—Well, I don't know what you have in mind; but it seemed to me that I was—I arrived at the conclusion that perhaps the private practice of medicine in which I was devoting most of my time at that time was for me much more preferable.

Q.—Much more preferable than the practice you found in Group Health? A.—I had only spent two or three hours a day at Group Health, anyway, and it seemed to me that the controversy was getting so that it would usurp a good deal of my time that I had to devote to sick people.

Q.—Do I understand correctly, then, Doctor, that you took into consideration what your experience had been in the practice at Group Health, over against your practice in the private practice of medicine, and that you preferred to pursue your private practice of medicine, and that therefore you resigned? A.—Well, I will put it in my own words, if you don't object.

Q.—I would be glad to have them. A.—I arrived at the conclusion to resign from Group Health because I felt I was wasting a good bit of time that should be devoted to the care of sick people, rather than to be involved in a controversy between Group Health and the Medical Society.

Q.—You could have devoted your entire time with Group Health if you wished, could you not? A.—I could have; yes. But it seemed to me that private practice was much more preferable.

Mr. Leahy:—That is all.

RE-DIRECT EXAMINATION

By Mr. Kelleher:

Q.—When you say that you preferred to spend more time a day in private practice, do you mean that you would have preferred private practice in the absence of this controversy between Group Health Association and the Society? A.—That is quite a hypothetical question, because actually there was no such situation.

Q.—All right. Let me put the situation, then. Was the controversy between Group Health Association and the Medical Society the cause of your resignation from Group Health Association? A.—Yes; I think it was the cause.

Mr. Kelleher:—That is all.

RE-CROSS EXAMINATION

By Mr. Leahy:

Q.—Did not your desire to devote your life to private practice, Doctor, enter into your decision as you have stated? A.—I just stated that a moment ago. Yes; that was a factor in my arriving at the conclusion to resign.

Q.—Then you took everything into consideration when you made up your mind? A.—That is right.

Q.—And you had the preference to private practice rather than Group practice—

Mr. Kelleher:—Oh, now; wait a minute.

Q. (Continuing)—if there was any controversy existing about Group practice? A.—Yes. I had a preference for private practice in preference to group practice, should there exist any controversy about the group practice type of medicine.

RE-DIRECT EXAMINATION

By Mr. Kelleher:

Q.—If there had been no controversy would you have resigned from Group Health when you did? A.—I said that that was a hypothetical question. If there had not been any controversy I might have still felt that some medical opinion ought to give the group type of practice support.

TESTIMONY OF SARAH ABBOTT

DIRECT EXAMINATION

By Mr. Kelleher:

Miss Sarah Abbott lives in Trenton, New Jersey. She was in Washington in 1937, employed in the Home Owners' Loan Corporation.

Q.—Were you a member of Group Health Association? A.—I was; one of the original members.

Q.—Were you in an automobile accident in January 1938? A.—Yes; on the 26th of January.

Q.—Will you describe that to the jury, please? A.—It was about 10 in the evening, and in crossing at Fourteenth and Pennsylvania Avenue I was run down by an automobile and badly injured, and a traffic policeman and a man passing helped me up, but I found I could not stand; and the woman who ran me down offered to take me to the All-States Hotel in her machine, and she did. The traffic policeman followed in an automobile, and when I got over to the hotel the traffic policeman helped me in. I found I could not stand on that leg (indicating) at all, and then he insisted that an ambulance be sent for, and they sent for an ambulance from Emergency Hospital. The intern with the ambulance thought the leg was broken, and I was taken over there and two of my friends went over with me, one in the ambulance and one called afterward. When I reached the hospital they took me to the emergency room and then I told them I was a member of Group Health, and the intern there said they did not recognize—

Mr. Leahy:—We object to what the intern said.

The Witness:—So, then, I called a Group Health physician, but I didn't have the night telephone number and it wasn't in the telephone directory at that time, because they were recently given it. So I suggested several people to telephone to, and they could not get any of them; they were not in at that time. So one of the friends who came with me agreed privately that she would telephone to a Group Health doctor in the morning. She didn't have the night telephone number. So an intern came around and I said, "Well"—

Mr. Leahy:—I object to what the intern said.

ORGANIZATION SECTION

JOUR. A. M. A.
MARCH 22, 1941

Mr. Kelleher:—Your Honor, I can connect it up with the hospital.

THE COURT:—I am inclined to think, gentlemen, that it would be admissible. The intern is a proper agent or officer of the hospital to act in these situations, and in view of what we have already, that would be admissible.

By Mr. Kelleher:

Q.—What did the intern say? A.—The intern told me that I couldn't stay there as a member of Group Health; that I could send for a physician outside if I wanted to; and I suggested one of the doctors who is a member of the emergency staff, but they said he was not a surgeon, so he wouldn't do. Then this intern told me that I couldn't stay there that night unless I of Group Health and I couldn't stay there that night unless I permitted the hospital to choose the physician. Then I asked him whom he was going to select, and he said Dr. Marbury. I didn't know him, but I agreed to anything at that time, it was taking so long telephoning.

Q.—Let me ask you a few questions about your experience in the emergency room. First, how long did the conversation between you and the intern take? A.—I think in the various telephone calls, and so forth, it must have taken nearly an hour.

Q.—After he told you that he did not recognize Group Health, did he leave the emergency room? A.—Well, you see there was a wall between where I was laid out on one of the emergency beds and the place where he telephoned. So I don't know. He was around on the other side, and he kept coming back and forth, talking to me.

Q.—Did you receive any treatment at all while you were in the emergency room? A.—No; none whatever. But when I agreed to take a room, then I was taken up to the room and the nurse took care of me the best she could that night.

Q.—What did she do for you? A.—She used hot water bottles, if I remember rightly. There was no medical attention that night. That was all.

Q.—Did any doctor come in that night? A.—No.

Q.—Dr. Marbury did not come? A.—No.

Q.—Did you want Dr. Selders to come that night? A.—I don't know. I wanted some one of the Group Health doctors that night, but as they could not get in touch with them I of course had to give up that, and there was nothing for me to do except to agree to stay, you see. And then the next morning Dr. Marbury came in and ordered an x-ray, and shortly after he had left Dr. Selders came in. I then told him what had happened and told him that I had no objection to staying at Emergency if he could arrange it; and it was agreed that if he could not arrange it he would send in some ambulance men and have me taken to another hospital. I think it must have been less than half an hour when the ambulance men came in for me and they put me on a stretcher and gathered up my things. No nurse came in at all, which surprised me. And then I was taken down and turned over to Garfield Hospital.

Q.—What occurred at Garfield Hospital? A.—At Garfield they admitted me at once and Dr. Selders came in and ordered an x-ray, and that was taken, and I was taken to a ward at first, and then was taken to a semiprivate room. Dr. Selders there came in to see me every day and he was just splendid and gave me the best of care and left his directions daily with the nurse. So that I had nothing to complain about as to the hospital treatment. It was very good.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Do you recall what day this was, Miss Abbott? A.—You mean, of the accident? It was the 26th of January.

Q.—1938? A.—Yes.

Q.—Do you recall about what time it was? A.—That it happened?

Q.—Yes. A.—It must have been about 10 or a little after.

Q.—In the morning? A.—Oh, no; at night.

Q.—Do you recall what time you got to Emergency Hospital? A.—Well, I don't know. I suppose the time it took me—it must have been about half past 11—no; it couldn't have been that late. It was before 11; half past 10, perhaps.

Q.—When was it you tried to reach the doctors of Group Health? A.—At the hospital?

Q.—Yes. A.—I don't know the time. It was just after I was taken in there. I at once told the intern that I was a member of Group Health and wanted a Group Health physician.

Q.—Do you recall how long it was that you tried to get the doctors of Group Health? A.—I should say it must have been an hour. My friends say it was along toward midnight before they got away.

Q.—From 10:30, when you came into the hospital, up until midnight you were still unable to get in touch with doctors on Group Health? A.—No; I could not reach any of them. The people they telephoned to they could not reach, so we could not get the doctors.

Q.—Did you call for any doctor that night at all at Emergency Hospital? A.—No. I just suggested that doctor who was on their staff, and the intern said he was not a surgeon, so he would not consider it.

Q.—Did anybody make any suggestion about getting another doctor? A.—Just the intern. The only suggestion he made was when he told me that I couldn't stay there unless the hospital was permitted to select the doctor. That was the only time he made any suggestion.

Q.—Was that that night? A.—Yes.

Q.—When you found out you could not get a Group Health doctor, then you said to the intern that you would take a doctor from their staff? A.—No; I didn't say that. He just said that I couldn't stay unless they selected the doctor. He made me agree to that. I agreed to take a room.

Q.—Did he say the doctor was on the staff? A.—He didn't agree to that. I agreed to take a room.

Q.—Did you try to get any doctor that night at anybody's suggestion after you found you could not get a Group Health doctor? A.—No; I did not.

Q.—Did they assign you to a room? A.—Yes. I agreed to take the room and they suggested the room, and I asked whom they were going to get, what doctor, and then the intern said Dr. Marbury, whom I didn't know.

Q.—Had you been in Washington long? A.—About 29 years.

Q.—You had never heard of Dr. Marbury? A.—Yes.

Q.—Did Dr. Marbury come the next morning? A.—Yes.

Q.—What time did he come? A.—I couldn't tell you. It was early.

Q.—Would you say, before 8 o'clock? A.—Somewhere around that time.

Q.—When was it that Dr. Selders came? A.—It couldn't have been more than half an hour after—it was less than half an hour after Dr. Marbury left. Dr. Marbury didn't stay but a few minutes.

Q.—Do you know how it was that somebody got in touch with Dr. Selders that morning? A.—Yes. A friend of mine from the All-States Hotel telephoned as soon as she could.

Q.—Did she phone from the hospital? A.—No. You mean, the next morning?

Q.—Yes. A.—No. I think she must have telephoned from the All-States Hotel.

Q.—Do you recall now about what time you got to Garfield Hospital? A.—I don't know. I suppose it couldn't have been later than around 10:30 suppose, the next morning.

Q.—Did you have any chat with Dr. Marbury at all when he came in? A.—He examined my leg and asked how it happened, and that is all. Nothing was said otherwise.

Q.—Dr. Marbury was the only doctor who saw you outside of Dr. Selders? A.—Yes.

Q.—Did Dr. Marbury recommend that an x-ray be taken? A.—Yes. That is all he did. He just examined that leg and recommended an x-ray, and said nothing else.

Q.—Do you remember the name of the intern? A.—Why, I didn't know him.

Q.—You did not hear anybody mention his name? A.—No.

Q.—When you got to Garfield Hospital an x-ray was taken, was it? A.—Yes.

Q.—And then you were assigned to a semiprivate room? Is that what you called it? A.—Yes.

Q.—How long were you in Garfield Hospital? A.—Three weeks.

Mr. Lewin:

U. S. EXHIBIT 475

Exhibit 475 is a letter from Gist Blair, president of Emergency Hospital, to the president and board of directors of Garfield Memorial Hospital, dated Jan. 27, 1938, on the letterhead of the Central Dispensary and Emergency Hospital:

"Gentlemen:

"Miss Sarah Abbott was brought to this institution by the hospital ambulance on the evening of January 26th. She was given first aid in the Emergency Room and assigned to a bed in the hospital under the care of the staff surgeon on that service, with a diagnosis of possible fracture and possibly other injuries.

"On January 27th, about noon, Dr. Raymond E. Selders, of Group Health Association, Inc., called and requested permission from the hospital authorities to take over the medical care of Miss Abbott, due to the fact that she was a member of Group Health Association, Inc.

"Dr. Selders was advised that we were informed that he was not a member of the District Medical Society and he was not on our courtesy list, and therefore we could not extend him the privileges requested. It is a prerequisite with this hospital for practicing physicians, to become a member of our courtesy list, to belong to the Medical Society of the District of Columbia.

"Dr. Selders contacted Dr. Henry Rolf Brown, at his office, in charge of Group Health Association, Inc., whereupon Dr. Brown called the Superintendent of this hospital and demanded a direct answer as to whether Dr. Selders would be permitted to take entire direct medical charge of the patient. He was advised that, due to the fact that Dr. Selders was not on our courtesy list, we could not extend to him that privilege, but Dr. Selders was advised that he would be privileged to visit and observe the patient and consult with the staff doctor in charge. Dr. Brown then advised that he was sending an ambulance for the patient to be removed from this institution, and a short time later an ambulance from Garfield Memorial Hospital arrived, and we understand the patient was taken to Garfield Memorial Hospital.

"We shall be under obligation to you for a full explanation of the circumstances under which this patient has been permitted to enter Garfield since it is not unlikely that we may be criticized for having declined to care for the patient as described when Garfield apparently is willing to take the patient as described.

"Thanking you for as full an explanation of this case as you can possibly give us,

"Very truly yours,
"Gist Blair,
President."

And then it says:

"P. S. Copy to Medical Society, District of Columbia."

And then:

"1/28/38. Patient—Miss Sarah Abbott, admitted to Ward H, at 3 p. m.
"1/27/38. Fractured leg. Condition good, though uncomfortable. Brought in by private ambulance, and is a patient of Dr. Selders, who still has temporary privileges."

And then some initials in handwriting.

U. S. EXHIBIT 476

The next is U. S. Exhibit 476, which is the reply of the president of Garfield Memorial Hospital to that communication from Major Blair, dated Jan. 29, 1938:

"Dear Major Blair:

"Your letter of the 27th in regard to Dr. Selders' patient has been sent to me.

"This patient was brought in to the Garfield Hospital by private ambulance on the 27th at 3 p. m., with a fractured leg, and was admitted to Ward H.

"In regard to Dr. Selders himself, he had been given the temporary courtesy privileges in accordance with our general practice, pending report on his credentials and standing, by the Staff. Upon the recommendation of the Staff these temporary courtesy privileges were withdrawn from Dr. Selders by the Board of Directors at its meeting on Tuesday the 25th instant. However, the notification of this action had not been received by Dr. Selders on the 27th when the patient in question was brought to the Hospital.

"I observe that you have sent a copy of your letter under acknowledgment to the Medical Society of the District of Columbia, and I am, therefore, sending a copy of this reply to them also.

"Yours very truly,
"Clarence A. Aspinwall,
President."

U. S. EXHIBIT 76

The next is Exhibit 76, which is an original letter from President Blair of Emergency Hospital to the Medical Society of the District of Columbia, dated Jan. 27, 1938:

"Attention Dr. Coursen B. Conklin, Secretary."

"My dear Dr. Conklin:

"I feel sure that the Medical Society of the District of Columbia wish this hospital to be able to carry on its work without unnecessary criticism, and we never have any favorites in the medical profession, although we have a staff of physicians accepted as the leading physicians in the city of Washington, who generously extend the privileges of the hospital to all those whom they believe capable and proper. This list is called our courtesy list.

"Inasmuch as we cooperate with the Medical Society wherever we believe the best interests of the public are served by it and we sustain our staff in its selection of this courtesy list, provided it includes the leading practitioners of the District of Columbia, therefore the enclosed letter is one which I wish you would bring before your Board and executive authorities. I would suggest that the enclosed letter be read carefully and a reply, which will enable us to not only care for this case but similar cases which may arise in the future, be given us.

"Thanking you.

"Very truly yours,
"Emergency Hospital.
"Gist Blair,
President."

U. S. EXHIBIT 75

The next is Exhibit 75, which is Dr. Conklin's reply to Major Gist Blair, dated Jan. 29, 1938:

"Mr. Gist Blair, President,
Emergency Hospital,
Washington, D. C.
"Dear Dr. Blair:

"Your communication of Jan. 27, 1938, has been received. The important subject matter will be given prompt consideration.

"Very truly yours,
"C. B. Conklin, M.D.
Secretary.

"cc—Dr. J. Ogle Warfield Jr., Chairman,
Hospital Committee."

U. S. EXHIBIT 77

Exhibit 77 is Dr. Conklin's letter to Dr. J. Ogle Warfield, Chairman of the Hospital Committee, Washington, D. C., dated Jan. 29, 1938:

"Dear Dr. Warfield:

"I am enclosing herewith correspondence which is self explanatory, for such action as your committee may deem proper.

"Very truly yours,
"C. B. Conklin, M.D.
Secretary.

"cc—Dr. Thomas E. Neill, President."

And the enclosures are copy of a letter from Gist Blair, President of Emergency Hospital, to the President of Garfield Memorial Hospital, dated Jan. 27, 1938, which has just been read, and a copy of the response of the president of Garfield Memorial Hospital to the president of Emergency Hospital, dated Jan. 29, 1938, which has just been read.

Mr. Levin:—I should like at this time to read certain correspondence had with the Washington Sanitarium, which is located in Takoma Park. The first is Exhibit 528, which is a letter from C. B. Conklin, M.D., Secretary of the Medical Society of the District of Columbia, dated July 29, 1937, sent to the Washington Sanitarium, at Takoma Park. It reads:

U. S. EXHIBIT 528

"Dear Doctor:

"It may have come to your attention that there is an organization or organizations that are interested in gaining medical personnel. Your attention is called to Chapter IX, Article IV, Section 5 of the Constitution, quoted in full.

"You are particularly urged to submit to the Compensation, Contract and Industrial Medicine Committee, pursuant to the Constitution, any or all contracts, written or verbal, under which you may contemplate giving your services.

"Very truly yours,
"C. B. Conklin, M.D.
Secretary

Mr. Levin:—The next is 529, which I will not read, and which is a letter from Conklin, Secretary of the Medical Society of the District of Columbia, which it was testified went to all the members of the Medical Society and all hospitals. It is dated July 29, 1937, enclosing this so-called approved list, which omits the name of Group Health.

Exhibit 451 is Mr. Kirkpatrick's letter to Mr. Rice, Credit Manager, Washington Sanitarium and Hospital, dated Feb. 4, 1938, reading as follows:

U. S. EXHIBIT 451

"Dear Mr. Rice:

"There is enclosed herewith an application executed by Dr. Raymond E. Selders, a surgeon on the staff of Group Health Association, Inc., for appointment to the staff of Washington Sanitarium and Hospital.

"It will be very much appreciated if this application may be presented to the proper body and advise us of such action as may be taken. Your prompt attention to this matter will be appreciated."

Mr. Levin:—The next is Exhibit 452, a letter from Robert A. Hare, M.D., from Washington Sanitarium, to Mr. W. C. Kirkpatrick, President, Group Health Association, dated Feb. 8, 1938:

U. S. EXHIBIT 452

"My dear Mr. Kirkpatrick:

"Your letter of February 4 accompanied by an application from Dr. Raymond E. Selders, for appointment on the staff of the Washington Sanitarium and Hospital, has been received.

"This application will have consideration at an early date and we will notify you of the action taken promptly."

Mr. Levin:—The next is a letter from Dr. Hare, Washington Sanitarium, to Mr. W. C. Kirkpatrick, Group Health Association, dated Feb. 14, 1938. It is Exhibit 453:

U. S. EXHIBIT 453

"My dear Mr. Kirkpatrick:

"In harmony with my recent communication I will state that our Board has considered the application of Dr. Raymond E. Selders which has come to us through your hands.

"In view of the fact that there are some problems existing between health groups and physicians, it was voted that the application be tabled, without prejudice, until your organization is recognized or approved by the American Medical Association or its local units. When a suitable plan is worked out in this line of endeavor we will be glad to consider this subject with you again. In the meantime, I am

"Very truly yours,
"Robert A. Hare, M.D."

Mr. Lewin:—The next is 455, a copy of a letter from Mr. Kirkpatrick to Robert A. Hare, Medical Director, Washington Sanitarium, dated July 29, 1938:

U. S. EXHIBIT 455

"My dear Dr. Hare:

"In view of Justice Bailey's decision yesterday establishing the legality of Group Health Association, Inc., it is respectfully requested that Dr. Raymond E. Selders, a member of our staff, be admitted to the courtesy staff of Washington Sanitarium and Hospital, and that he may attend members of this Association admitted as patients there.

"We shall appreciate the courtesy of an early reply.

"Very truly yours,
"W. C. Kirkpatrick,
President."

Mr. Lewin:—Exhibit 456 is a letter from Dr. Hare to Mr. Kirkpatrick, dated Aug. 8, 1938:

U. S. EXHIBIT 456

"My dear Mr. Kirkpatrick:

"Your letter of July 28 has been received. Would state that the question you raise will have consideration in due course.

"Sincerely
"Robert A. Hare, M.D.,
Medical Director."

Mr. Lewin:—The next and last is 457, which is Mr. Kirkpatrick's letter to Dr. Hare, dated Sept. 16, 1938:

U. S. EXHIBIT 457

"Dear Dr. Hare:

"On Aug. 8, 1938, you advised me that the application of Dr. Raymond E. Selders for admission to the Courtesy Staff of your hospital, which was the subject matter of my letter of July 28, 1938, would have consideration in due course.

"I shall appreciate it very much if I may have some advice from you as to what action that may have been taken in the meantime.

"Very truly yours,
"W. C. Kirkpatrick,
President."

MARCH 3—MORNING

Mr. Lewin:—May it please the Court, I think, in order to make the record clear, I should restate the Government's offer in evidence of those portions of the minutes of the District Medical Society and its executive committee and the documents referred to in and attached to the minutes. I refer, of course, only to those minutes which were identified as such by the defendant Wiprud, and I refer to all of them except the minutes of the Society for Jan. 6, 1937 and March 3, 1937, no portions of which were offered as yet.

The Government's offer includes, and only includes, those portions of the minutes which show the attendance, the fact of participation of all persons present at the meeting, and those portions which show the approval of the minutes of any prior meetings, and all of the portions of the minutes which were read to the jury by Government counsel, whether marked as hereinafter indicated or not, and all portions of those minutes or other papers attached thereto which have been marked with colored crayon in photostatic copies of the minutes; the said photostatic copies of these minutes as bearing these markings being likewise offered merely for the purpose of identifying these portions. All of this evidence was offered and received, as I understand it, against all of the defendants as against whom the Court has determined or may determine that a prima facie case as charged in the indictment has been established, either by this evidence or by any other evidence offered or to be offered by the Government in this case.

THE COURT:—If you will pass me a copy of that I will reread it.

(Mr. Lewin handed a memorandum to the Court.)

TESTIMONY OF DR. WALTER ARTHUR COOLE

DIRECT EXAMINATION

By Mr. Allen:

Walter Arthur Coole said that during the period from Oct. 30, 1937, to Nov. 23, 1938, he was secretary of the Harris County Medical Society. He was authorized by the Society to appear on behalf of that society in this court.

Q.—I wish to show you Government Exhibit 73-A, which is now in evidence, and ask you if you, as an official of the Harris County Medical Society, received a copy of that from Dr. Taylor? A.—I did not receive the copy. The President received the copy.

Q.—And it came to the Society's attention? A.—Yes, sir.

Q.—I next show you Exhibit 537, which is a letter from Dr. Holman Taylor dated Nov. 24, 1937, to Dr. B. F. Smith of the Harris County Medical Society, and ask you if that came to the Society's attention? A.—Not to my knowledge; no, sir.

Q.—Is that Dr. Taylor's signature (indicating)? A.—Yes, sir.

Q.—And you are acquainted with Dr. B. F. Smith? A.—Yes.

Q.—I next show you Government Exhibit 538, which is a letter dated Nov. 25, 1937 from Dr. P. M. Ashburn to the Secretary of the Houston Medical Society, and ask you if you received that letter as the Secretary of the Harris County Medical Society? A.—Yes, sir.

(The witness identified signatures, correspondence and minutes concerning Holman Taylor, A. B. Talley, C. B. Conklin, The Judicial Council, Minutes, Olin West, etc., relative to membership of Raymond E. Selders in the Harris County Medical Society.)

Your Honor, I do not wish to offer any of these documents at this time; and I am through with the witness.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Is the Harris County Medical Society a component society of the American Medical Association? A.—A component society?

Q.—Yes. A.—I don't know what that means, sir.

Q.—Do you have any State Society in Texas? A.—Yes, sir.

Q.—What is that called? A.—The Texas State Society.

Q.—What is the Harris County Medical Society? A.—The Harris County Medical Society is an association of doctors who practice in Harris County.

Q.—When was it formed, if you know. A.—You mean, the origin of the Society?

Q.—Yes. A.—The origin of the Society began with the 14 doctors who fought in the Battle of Sandy Center and settled in Harris County; and the Society itself was formerly called the Houston Medical Society in 1892, and it was extended to include all of Harris County in 1903.

Q.—What was this battle you spoke about?

Mr. Lewin:—I object to this going any further. I think it is legitimate enough to get in the Medical Society, but when counsel wants to go into a battle I think that is going a little beyond the proper scope.

Mr. Leahy:—Don't you like battles?

Mr. Lewin:—We have plenty of battles on our hands right here.

By Mr. Leahy:

Q.—Under the rules of the Society were you authorized to keep minutes? A.—Yes, sir.

Q.—Are you a shorthand reporter yourself? A.—I write shorthand; yes, sir.

Q.—Did you take down in shorthand just what was said, or did you take what you thought was the substance of what was said? A.—I took down what I could to the best of my ability.

Q.—Word for word as each one spoke? A.—Some of it was word for word, and some was in notes.

Q.—Then, after you had taken it down in shorthand, about a week later, you say, you wrote up the notes? A.—Usually within a week; as soon as I could get to them.

TESTIMONY OF DR. GEORGE B. TRIBLE

DIRECT EXAMINATION

By Mr. Lewin:

(George B. Tribble said he is a practicing physician of the city of Washington. His specialty is otolaryngology—ear, nose, and throat.)

Q.—Did you have occasion to operate upon a young boy named Lewey Gilstrap in November of 1937? A.—Yes, sir.

Q.—Will you tell the jury the circumstances under which you agreed to perform that operation? A.—I was called to see

this case, and I found that they were members of Group Health Association, but there was no specialist in their group, and they had been referred to me. I did an immediate operation, which was opening of the eardrum, and I explained to the father that I would not be able to handle the—

Mr. Leahy:—I object to any conversation.

THE COURT:—Objection sustained.

The Witness:—The case was taken to the Children's Hospital. It was first x-rayed by Dr. Bierman, roentgenologist or x-ray man in this city, which confirmed the diagnosis of an acute mastoiditis. The case was taken to Children's Hospital and admitted, and I operated, I think, that same night, or the next morning—it was the next morning.

Q:—Who was present during the operation? *A:*—The hospital anesthetist.

Q:—What was his name? *A:*—Dr. Macon. The surgical assistant was named Dr. Cohen, and the nurses who were in attendance.

Q:—Anybody else? *A:*—During the course of the operation Dr. Scandifio came in, just at the time I was going through the outer layer of the bone which we call the cortex, and just as I cut through the cortex the pus came squirting up through, and he just happened to look in at that time, and stayed about five minutes and left.

Q:—How did he happen to come there? *A:*—The night before he called me up and said—

Mr. Leahy:—I object to the conversation.

THE COURT:—Objection sustained.

By Mr. Lewin:

Q:—He called you up. Did you invite him to come? *A:*—He asked permission to come.

Q:—Did he come as a result of that conversation? *A:*—Yes, sir.

Q:—Was this patient taken there by you and operated on as a private case? *A:*—Yes, sir.

Q:—How serious an operation was it, Doctor? *A:*—Acute mastoiditis, with an abscess around the big vessel that goes beneath the mastoid bone.

Q:—Was the abscess large? *A:*—Yes, sir.

Q:—Did the patient make recovery all right? *A:*—A perfect recovery.

Q:—To whom did you send your bill? *A:*—To the patient's father.

Q:—Mr. Gilstrap? *A:*—Yes, sir.

Q:—Who paid it? *A:*—The check was received from the G. H. A.

Q:—Do you know who had charge of your Lewey Gilstrap and was looking after him, before you saw him? *A:*—I think, Dr. Scandifio saw him before I saw him. I am not clear on that.

Q:—Had you known Dr. Henry Brown, the medical director of Group Health Association? *A:*—Many years.

Q:—Had he been a personal friend of yours? *A:*—For many years.

Q:—You knew he was Medical Director at that time? *A:*—Yes, sir.

Q:—Did you make any report to Dr. Brown upon your handling of the Gilstrap case? *A:*—Yes, sir.

Q:—I show you Government Exhibit 567 and ask you whether that is a copy of the report which you gave to Dr. Brown? *A:*—A carbon copy of the report, sir.

Q:—Is it dated Dec. 20, 1937? *A:*—Yes, sir.

Mr. Lewin:—I offer it in evidence (handing paper to Mr. Leahy).

Mr. Leahy:—I will pass that up to your Honor. It strikes me that it is entirely immaterial. It is a copy of a report which was rendered to Dr. Brown (handing letter to the Court).

THE COURT:—What is the materiality of it?

Mr. Lewin:—It will come out clearly as the examination proceeds.

THE COURT:—I doubt its admissibility. Objection sustained.

By Mr. Lewin:

Q:—At that time were you a member of the District Medical Society and of the A. M. A.? *A:*—Yes, sir.

Q:—Have you continuously been a member since that time? *A:*—Before and since; yes.

Q:—Did you know the defendant R. Arthur Hooe? *A:*—Yes, sir.

Q:—Did you know that he was chairman of the Compensation, Contract and Industrial Medicine Committee of the District Medical Society? *A:*—Yes, sir.

Q:—Did you receive in May of 1938, six months after this operation, a letter from Dr. R. Arthur Hooe? *A:*—I did.

Q:—I show you Government Exhibit 568 and ask you if that is the letter you received from the defendant Hooe? *A:*—That is the letter.

Mr. Lewin:—I offer it in evidence (handing letter to Mr. Leahy).

Mr. Leahy:—O. K.

Mr. Lewin:—No objection?

Mr. Leahy:—No.

(Letter dated May 14, 1938, from Hooe to Trible was marked U. S. Exhibit 568 and received in evidence.)

U. S. EXHIBIT 568

Mr. Lewin:

"May 14, 1938."

It is on the letterhead of the Medical Society of the District of Columbia:

"Dr. George B. Trible
1801 I Street N.W.,
Washington, D.C.

"Dear Dr. Trible:

"You are hereby directed to appear before the Compensation, Contract and Industrial Medicine Committee at the Medical Society Building, 1718 M Street, N.W., on Tuesday evening, May 17, 1938, at 8 p. m.

"Very truly yours,

"R. Arthur Hooe, M.D.,

"Chairman of the C. C. & I. M. Committee."

By Mr. Lewin:

Q:—Had you ever received a communication like that before from that committee? *A:*—No, sir.

Q:—What, if anything, did you do to prepare yourself for that committee meeting? *A:*—As I recall it, I secured a statement from the parents of the patient regarding the case, and from Dr. Brown regarding the case.

Q:—At that time was Dr. Brown still Medical Director of the Group Health Association? *A:*—Yes, sir.

Q:—Are you sure of that, Doctor? Had he not resigned at that time? *A:*—My impression is that he was still a member.

Q:—Did you determine to obey this summons to attend this meeting as directed? *A:*—Earlier than directed. I had something I had to do later, and I asked permission to come in at 7:30.

Q:—I show you Government Exhibit 569 which purports to be a statement of Mr. Lewey O. Gilstrap, dated the 16th of May, 1937, and I show you also Government Exhibit 570 which appears to be a statement of Dr. Brown, dated May 15, 1937, and ask you whether they are statements which you obtained in preparation for this hearing. *A:*—True statements, and notarized.

Mr. Lewin:—I offer them in evidence.

By Mr. Lewin:

Q:—Let me ask you this. Did you take these statements with you to the committee hearing? *A:*—As I recall; yes, sir.

Q:—And submitted them to the committee? *A:*—Yes, sir; and the letter.

Q:—The letter which you sent to Dr. Brown, Exhibit 567? *A:*—Yes, sir.

Q:—Were those documents considered by the committee in your presence? *A:*—The committee meeting was very short—

THE COURT:—You mean, were they read?

Mr. Lewin:—Yes, or considered.

By Mr. Lewin:

Q:—Were any questions asked about the contents of them? *A:*—The meeting was very informal. It lasted a very short time. I did not pay much attention to it; I thought nothing of it.

Q:—Who was present? *A:*—As I recall, Dr. Hooe, Chairman; Dr. Fred Sanderson, member—

Q:—Is that Dr. Fred R. Sanderson? *A:*—Yes; Dr. Putzki, a member.

Q:—That is Dr. Paul S. Putzki? *A:*—Yes, sir; and Dr. Greear, a member.

Q:—And Dr. Nicholson? *A:*—Yes, sir; a lady doctor.

Q:—Who asked you questions at the committee hearing? *A:*—There were very few questions asked. Dr. Hooe asked a few. It was very informal.

Q:—What was the subject matter of the questions? *A:*—My relationship with Dr. Brown and with this case, and relationship with G. H. A. in general.

Q:—Were you asked questions about the Gilstrap case and your handling of it? *A:*—Yes.

Q:—And your personal relationship with Dr. Brown? *A:*—Yes, sir.

Q.—Had you had luncheon with Dr. Brown at times? A.—Frequently, before and since.

Q.—Was that the subject matter of the questions? A.—My mind is very vague. I think it was whether I knew him well, and so forth.

Q.—And this report which you made to him on the Gilstrap case was also discussed? A.—Yes.

Q.—And you were asked questions about that? A.—Yes, sir. Mr. Lewin:—I re-offer, in view of the testimony, Government Exhibit 567, and I also offer at the same time Government Exhibits 569 and 570.

Mr. Leahy:—The same objection, if your Honor please. I cannot see how they are material. It has already been covered in the testimony (handing papers to the Court).

By Mr. Lewin:

Q.—Did you leave these three documents with the committee? A.—Yes, sir.

THE COURT:—They will be admitted.

Mr. Lewin:—The first is Government Exhibit 567, which is a copy of Dr. Tribble's report to Dr. Brown, dated Dec. 20, 1937. He testified he made it after the operation on Lewey Gilstrap.

Mr. Lewin:

U. S. EXHIBIT 567

"Dec. 20, 1937.

"Dr. Henry R. Brown, Group Health Assn.,
1328 Eye St., N. W., City.

"Dear Dr. Brown:

"Complying with your request for information regarding Lewey Gilstrap, whose father is a subscriber to the G. H. A., and as such is entitled to treatment for his family by the Association, but who was seen by me on several occasions and operated on at Children's Hospital as a private patient. He was seen at home on November twenty-second, twenty-third, and twenty-fourth, a paracentesis being performed on November twenty-third at the home. This case presented a great many difficulties of diagnosis. The child was very patently sick. He had given a history of previous trouble, which had necessitated several days hospitalization last year. He suffers from enlarged tonsils and adenoids, both evidently infected. He was directed to be brought to this office on November twenty-fourth, which time an X-ray was taken by Dr. H. I. Bierman, a copy of which report is enclosed. He was operated at Children's Hospital on November twenty-fifth, disclosing a large mastoid abscess which had perforated the outer cortex of the mastoid and which corresponded to the painful spot which had been a marked symptom throughout. Cultures from the pus, made in the Children's Hospital laboratory showed strep hemolyticus. The child made a very good recovery, was discharged from the hospital in about a week, and comes into this office every other day for treatment.

"Sincerely,
"G. B. Tribble."

Government Exhibit 569 is the statement which Dr. Tribble obtained from the father of Gilstrap, dated May 16, 1938, in the form of an affidavit.

U. S. EXHIBIT 569

Mr. Lewin:

"District of Columbia, } Affidavit.
City of Washington. }

"Lewey O. Gilstrap, of lawful age, being first duly sworn on oath deposes and says: That to the best of his knowledge he is now a member, in good standing, of Group Health, Inc., Washington, D. C., and that he was such member at all times hereinafter mentioned.

"That on the 24th day of November, 1937, it was discovered by doctors in the said Group Health that Lewey G. Gilstrap Jr., son of affiant, was suffering from Mastoiditis; that said Group Health, at that time, had no doctor on its staff who specialized in such cases, and it had no facilities to care for such cases, and affiant was advised by said doctors that it would be necessary to obtain a competent physician in private practice in Washington to attend to the case.

"That affiant, having confidence in the ability of Dr. G. B. Tribble in such cases, took his son to the office of said Dr. Tribble on the evening of Nov. 24, 1937, and asked for his advice in the case. That Dr. Tribble examined the boy and advised the placing of the boy in the Hospital at once, and on the next morning, and on Nov. 25, 1937, Dr. Tribble performed a mastoid operation on the boy, which operation was entirely satisfactory.

"That from the time affiant took said boy to the office of Dr. Tribble, the said doctor considered him a private patient, and was looking to affiant for payment of his fees, and affiant agreed to be responsible for said fees.

"Witness my hand this 16th day of May, 1938.

"Lewey O. Gilstrap.

"Subscribed and sworn to before me this 16th day of May, 1938.

"Anthony De Poto

"Notary Public."

Q.—Shortly after that meeting with the committee, were the papers that you left with the committee returned to you? A.—Shortly after, returned by Dr. Hooe in person.

Q.—Where were they returned to you? A.—To my office, then at 1801 I Street.

Q.—Do you remember how long after it was they were returned to you? A.—I don't recall.

Q.—Wasn't it shortly after? A.—Yes.

Q.—Will you tell the jury what transpired when Dr. Hooe came to your office? A.—Well, he brought back the papers—

Q.—First, do you remember exactly what was said there in every detail? A.—Yes, in every detail. It made quite an impression on me. So I said, "That is fine"; I looked them over. He said, "Well, I am resigning from the chairmanship of that committee." He stated, "You will have to appear before the executive committee." I was a little surprised at that. I hadn't paid any attention to it. I thought it was just a matter of form, of no consequence; I didn't take it seriously. So he said, "You have done wrong" and he said, "If I could see things as he did, and when the time came, to come to him, then I could go to sleep soundly." I didn't have any trouble about sleeping; I didn't think I had done anything to be worried about. We had a long harangue there in my office. I don't recall it in detail. He asked me about Dr. Brown and I told him that I had known Dr. Brown for a great many years; that "He is a very fine fellow." He said, "Yes, so was Dillinger; he was a fine fellow too." It continued to get a little more exciting there. He got up and he said, "Well, you will have to be careful of this society." He said, "The Medical Society"—I don't know, should I repeat what he said?

Mr. Lewin:—Well, characterize it: was it some vulgarity?

The Witness:—Yes, it was some vulgarity; "That the members of the society were S. O. B.'s. That they are not fit to lace your shoes, but they will pass judgment on you." I didn't feel that way about it. I hadn't done any wrong.

Q.—What physical appearance did he manifest on that occasion, while he was talking to you? A.—He was walking around, back and forth; excited; I thought he was going to have a stroke.

Q.—What was the pitch of his voice? A.—It raised to a crescendo.

Q.—All right, he left these papers with you and said you would be passed on by the Medical Society, executive committee?

THE COURT:—Don't repeat it.

Mr. Lewin:—I was just trying to get that clear.

THE COURT:—You are merely summarizing.

By Mr. Lewin:

Q.—Did you do anything more to prepare for that meeting? A.—It so impressed me that immediately upon his leaving I took a prescription pad and jotted down notes of what transpired.

Q.—And you have those notes? A.—Yes.

Q.—And have looked at them from time to time since? A.—Yes.

Q.—Did you receive any further communication from the Medical Society on the subject? A.—I received a communication, I don't recall, he brought this report and then I got a communication from the executive side.

Q.—He brought this report, did he? A.—Yes.

Q.—What did the report say? A.—That I had been found guilty of violating Article so and so, relating to contract practice.

Q.—Were there any other circumstances than the ones concerning which you have testified now upon which such finding of guilty could have been based? A.—Not to my knowledge; I have followed the rules.

Q.—I show you Government's Exhibit 571, and ask you whether that is the report the defendant Hooe brought you on that occasion? A.—Yes.

Mr. Lewin:—I offer it in evidence.

Mr. Leahy:—It is not a report.

Mr. Lewin:—You can characterize it as anything you want.

Mr. Leahy:—You said it was a report.

Mr. Lewin:—I didn't do any such thing; the witness said it was a report, and I offered it in evidence.

THE COURT:—Whatever it may be called, it will be admitted. There may be some question as to what it will be called.

Mr. Lewin:—It will speak for itself.

THE COURT:—Yes, it will.

Mr. Lewin:—Exhibit 571 is dated May 17, 1938, and is addressed to Dr. George B. Tribble. It reads:

U. S. EXHIBIT 571

"The Committee hereby charges you with having violated Section 2 of Article 3 of Chapter 9 of the Constitution of the Medical Society of the District of Columbia, reading as follows:

"Every member of the Society before entering into a contract or agreement for rendering professional service shall submit a copy of his contract, if written, or a true declaration of the terms of the agreement, in writing, to the Committee on Compensation, Contract and Industrial Medicine for approval. In the event that the committee disapproves the contract, a member may appeal to the Executive Committee."

"And again Chapter 9, Article 4, Section 5, as follows:
"No member of the Society shall engage in any professional capacity whatsoever with any organization, group or individual, by whatever name called or however organized, engaged in the practice of medicine within the District of Columbia or within 10 miles thereof, which has not been approved by the Society."

"The Executive Committee is authorized and directed to prepare an approved list of organizations, groups and individuals, by whatever name called and however organized, engaged in the practice of medicine within the District of Columbia or within 10 miles thereof, and the same shall be kept in the office of the Secretary-Treasurer. Before any such organization, group or individual can be placed on the approved list of the Society, such organization, group or individual, or the member of the Society proposing professional relations therewith, shall submit to the Compensation, Contract and Industrial Medicine Committee such evidence as the Committee or the Society may require showing the character, activities, financial condition and ethical standards of said organization, group or individual, and after considering the same, said committee shall make a report of its investigation and findings to the Executive Committee for such action as it may deem necessary."

"R. Arthur Hooe, M.D.

"Chairman, Compensation, Contract and Industrial Medicine Committee."

By Mr. Lewin:

Q.—Now, with reference to this matter, did you receive any further word from the executive committee? A.—Yes.

Q.—Specifically, did you receive Exhibit 572, which purports to be a letter to you from the defendant C. B. Conklin, dated May 31, 1938, on the letterhead of the Medical Society? A.—Yes.

• Mr. Lewin:—I offer it in evidence.

(Letter, May 31, 1938, Conklin to Tribble, marked U. S. 572, was received in evidence.)

By Mr. Lewin:

Q.—Did you do anything in preparation for that meeting? A.—Yes, I was very much upset, naturally, under the circumstances. I hadn't paid much attention to it before, so I got a statement from Dr. Bierman.

Q.—That was the anesthetist, or the x-ray man? A.—And a statement from the anesthetist, Dr. Cohen; a statement from the nurse who had posted the operation, and who was present at the operation.

Q.—Did you obtain those statements for use before the executive committee? A.—Yes.

Q.—In answer to those charges? A.—Yes.

Mr. Lewin:—This is Exhibit 572. It is the letter from Dr. Conklin to Dr. Tribble, dated May 31, 1938:

U. S. EXHIBIT 572

"Dear Doctor Tribble:

"You are hereby directed to appear before a meeting of the Executive Committee, on Monday evening, June 6, 1938, in the Medical Society Building, at 8 p. m.

"Very truly yours,
"C. B. Conklin, M.D.,
"Secretary."

By Mr. Lewin:

Q.—I show you Exhibits 573, 574, 575 and 576, and ask you if they are the four statements you obtained and concerning which you have just testified? A.—They are.

Q.—And were they sent to the executive committee by you? A.—Yes.

Q.—And were they accompanied by a letter from you to the executive committee dealing with these charges? A.—Yes.

Q.—Is Exhibit 52, which I have just shown you, the letter which you prepared and sent to the executive committee? A.—Correct.

Mr. Lewin:—I offer in evidence Exhibit 52—you gentlemen, I think, are familiar with it, are you not? And also these supporting Exhibits 573, 574, 575 and 576.

Q.—Did you ask any member of the executive committee to transmit these communications to the executive committee? A.—Yes.

Q.—Did you attend yourself? A.—I did not.

Q.—Did you receive any further communication from the executive committee after the date of that hearing? A.—Yes.

Q.—From whom? A.—From Dr. Sprigg; he was then chairman of the executive committee.

Q.—Can you remember what he said? A.—I don't recall what he said, but I recall my reply. He had said, in substance, "Don't do it again."

Q.—And you made a reply? A.—Yes.

Q.—Do you recall your reply? A.—Very distinctly.

Q.—What was said by you? A.—I said, "Your letter received and contents noted. May I quote the motto of the Knights of the Garter of old, 'Honi soit qui mal y pense'."

Q.—And will you translate that motto? A.—"Evil be to him who evil thinks."

Mr. Leahy:—Will your Honor kindly look these over (handing documents to the Clerk)?

Mr. Lewin:—Do you object to them?

Mr. Leahy:—Yes, the same objection, not material.

THE COURT:—Are these submitted in connection with his answer?

Mr. Lewin:—That is his testimony.

THE COURT:—They will be admitted.

Mr. Lewin:—I will read first Exhibit 573, Dr. Bierman's statement, dated May 21, 1938. It is addressed to Dr. Tribble.

"Dear Dr. Tribble:

"Replying to your note regarding the Gilstrap case and the request that you appear before the Committee, I want to say that I went to see Dr. Hooe about this matter. I went to see him because I could not understand how anything could have been considered unethical in regard to our conduct in this case.

"I told Dr. Hooe that I had heard you were being questioned about the Gilstrap case and that if you were guilty I was also. I explained to him that you had told me in advance of my x-raying the patient that tho the patient had originally been treated at the Group Health he was now a private case and that he would be handled as such, and that I was to send my bill directly to the patient as in all private cases.

"Dr. Hooe reacted rather violently to my insistence that I could also be guilty, saying that the patient was referred to me by a private physician. He would not listen to my statement that I knew in advance that the patient had originally been treated at the Group Health and had been sent to you. His apparent inconsistency and vehement denial of any possibility of my also being guilty seems rather strange to me. I do not understand what is back of the whole matter, but I cannot see where one person could be guilty and another not guilty in exactly the same case when each one acted according to the accepted rules of the Society. It was impossible for me to argue with Dr. Hooe because of his very emphatic stand in the matter.

"Is it possible that there may be a personal matter back of the whole affair? The next day after I spoke to Dr. Hooe I met him on the stairs in this building coming from the third floor. I asked him whether he had been to see you in regard to the case and he said he had NOT. Later, when I spoke to you, I learned that he HAD been in to see you. I can't understand why he denied having just seen you or why he should make personal visits to a defendant outside of any regularly scheduled hearing and apparently without the knowledge of the remainder of his committee. If I can be of any assistance before the Committee, please feel free to call upon me.

"With best wishes, I remain,
"Sincerely,
"M. I. Bierman."

Mr. Lewin:—The next is Exhibit 574. It is from Dr. Edward B. Macon, to Dr. Tribble, and is dated May 23, 1938.

U. S. EXHIBIT 574

"Dear Dr. Tribble:

"In reply to your request for my knowledge of the Gilstrap case let me say first that I am, as you know, opposed to any dealings with Group Health Association or any similar association. I approve of the present policy of the Medical Society in their endeavor to control its member for the good of the Medical Profession and the public.

"As far as this particular case is concerned, the simple facts are that before this operation for mastoiditis you frankly stated that it had been a G. H. A. case and was now your private case. I did not then and I do not now see any reason why you could not under these circumstances treat the case.

"The investigation itself was conducted in a manner to arouse one's antagonism. On Friday May 13, 1938 I received a telephone message to call a certain number but the individual would not leave his name. To this call I paid no attention. Later he called again and left his name stating that 'I can save the Doctor some trouble if he gets in touch with him.' On getting in touch with Dr. Hooe he stated that he wanted to see me. When I asked him the nature of the business he stated that he could not discuss it over the telephone. I told him I would try and see him but that I was busy at the moment. He then said that 'he would leave it like this, that if I did not see him before noon Monday I would have to appear before a committee Tuesday evening.' As I had no reason not to appear before the committee and as this sounded like a threat I did appear before the committee. Up to that time I did not know the reason I was to appear before them. As Chairman of the Committee Dr. Hooe then told me that in view of your testimony he had no questions to ask me. Another member of the committee then asked me if I had ever received a check from the G. H. A.

"I hope this letter may clarify your association with this case and the frank way in which you dealt with it and all other matters in which it has been my pleasure to be connected.

"Sincerely yours,
"Edward B. Macon."

Mr. Lewin:—Then comes Mary O'Sullivan's statement. She was the nurse attending at the operation. Her letter is dated June 4, 1938.

U. S. EXHIBIT 575

"Dear Dr. Tribble:

"In so far as I know the Gilstrap child came to us as your semi-private case, and was handled the same as your other cases.

"Sincerely yours,
"Mary O'Sullivan."

Mr. Lewin:—576 is the letter of Dr. Cohen, dated June 4, 1938, addressed to Dr. Tribble:

U. S. EXHIBIT 576

"My dear Dr. Tribble:

"I recall assisting you do a mastoid operation on or about Nov. 25, 1937 at Children's Hospital. I cannot recall the name of the patient, though I understand now that his name was 'Gilstrap.' During the operation I heard you say in effect that the patient was originally a member of the Group Health Association and that you had seen him through Dr. Scandiffo. You stated that at first you had not wanted to take this case, but that you had finally agreed to accept him as a private patient of your own because the nature of the illness was so acute as to require immediate operation.

"Dr. Scandiffo was present for a short while after the operation had gotten under way.

"Truly yours,
"A. Cohen, M.D."

Mr. Lewin:—Exhibit 52 is Dr. Tribble's letter to the Secretary of the District of Columbia Medical Society, dated June 6, 1938. It is addressed to:

U. S. EXHIBIT 52

"My dear Doctor Conklin:

"It is a source of regret that I am unable to appear personally Monday night, but inasmuch as there has been, to my mind, no offense, no defense is contemplated. The facts relative to the G. H. A. are as follows:

"The former Medical Director, Doctor Brown, and I have been friends for years. I have treated him and his family and naturally, when he accepted the position as head of that organization, he asked me if I would consider a consultanship. I replied that if, and only if it were acceptable to the laws of the District and the by-laws of the Medical Society. He said he felt it was and wanted to cooperate and act under such laws, but seeing how I felt, he let the matter drop. I have not even seen his clinic.

"The Torch Club here asked me to present the organized medicine side of a debate. I told Mr. Elwood Street that I would be glad to help, but I was no speaker and suggested Dr. Christie, Dr. McGovern and Dr. Bennett. Then they thought it would be a good idea to have G. H. A. represented, so I asked Doctor Brown. He did not get in for dinner and for only a part of the debate and declined to speak. Dr. Christie and Dr. Bennett spoke and made a good impression on a hostile audience. I was warned after that, by two of my associates, that I was under suspicion and would be in trouble being seen with Doctor Brown. Inasmuch as he is a doctor, a gentleman and a friend, I have felt it a matter of personal privilege and not a regulatory affair.

"With a number of constituents ranging from 1,500 paying members up to 2,500, and their dependents, all multiplied by three, there naturally arose many cases in all fields. Knowing my attitude in this matter, they purposely were not referred to me. During all this time, to the best of my knowledge, two surgical cases came to me, one the case in question and the other an antrum case operated at Garfield also as a private patient, but who stated she was eligible for clinic and treatment and thought they should settle her bill. A dentist named Cling was also in this case. She found she was not eligible for treatment and personally paid her bill, as I told her I expected. She made two payments, one of \$100 and one of \$75. At the time she was operated, I told the anesthetist her claim, but that I had no connection with nor accepted any responsibility from that organization and looked to her personally for payment. She was also x-rayed by Dr. Bierman and treated just as any other case. She has left her job and cannot be contacted. Several patients among my clientele at different times told me they were eligible for treatment, but I sent them all bills which they paid.

"Reverting to the Gilstrap case, there was no connection with the G. H. A. and the patient was handled as any other, arrangement made from the office for it, as is always done. I mailed the bills to the patient regularly, not discounted, but based on the Mayo plan, the same as all other major operations. Later, after several months, it was paid from the G. H. A. There was no rule at that time that such checks should not be accepted. They were so accepted by many members of the society, though I have been told by two, who had similar cases, that they called the committee before accepting them. Referring to the by-law regarding an individual not on the accepted list, I note that both you, Mr. Secretary and I, treated Dr. Penhalow's children and I understand this rule was put in to prevent his contact with members of the District Society. It is remarkable that I have never got any pay cases from him or his clinic. Evidently they are treated by other specialists.

"Then I was called before the committee. I had only a half hour. I simply told them, as I said, that I felt I needed no defense, nor do I feel so now, and went away.

"Referring to the case at Children's Hospital, Dr. Scandiffo called me regarding this case and requested permission to be present at the operation and was present for a short time about the middle of the surgical procedure. He was at that time a member of the District of Columbia Medical Society.

"With reference to the claim by the chairman of the Committee on Contracts, etc., who stated that the letter in response to a request from Doctor Brown constituted a validity to the charge, I was cooperating with them. I think the rule was that phone calls or letters reporting on such cases were permissible to other than members of the Society, but personal consultations were not. I considered this request the same as from an insurance company and so replied. I replied by letter rather than by phone so that a record could be kept. It stated clearly that this was a private case.

"The chairman of the contracts committee brought back the papers I had submitted, made a long harangue in my office, about which I immediately jotted down notes, and ended by saying if I could see things as he did, and when the time came, to come to him, then I could go to sleep soundly. I was also told that the Society was full of s. o. b's. and a . . . a . . . s, but they would sit in judgment on me, though they were not worthy to lace my shoes. I told him I did not feel that way about them and a difference of opinion was understandable.

"Now there is no defense for there is no offense that I can see. I am submitting herewith certain papers to be presented for the committee. If there be any offense I am sorry and accept full responsibility, for in the case of the x-ray man and the anesthetists, I told them the circumstances and felt these were private patients, and they felt as I.

"I have deep regard for the Society and live up to its rules. I resigned as a Commander in the Medical Corps of the Navy and threw my lot with you. I know state controlled medicine as but few do, and I realize its good points and its bad ones. The men in the military services are high class men and I have always stood up for them, so much so I am called 'The Admiral' in some ridicule. It is a bad bird that soils its own nest. I stand for the District now as I stood for them and I regret if in any way I have been at fault. I do resent and have resented any infringement on personal social contacts and so do you. If there are any points I can elucidate further I will be glad so to do, but no defense is being submitted, for the facts are as I state them and I will be glad to have this passed upon by the Judicial Council of the A. M. A.

"In passing, you will note that the famous Gilstrap case was treated in semi-private accommodations and kept in the hospital a minimum of time following the mastoidectomy. This should point conclusively to the truth, which is that he wished the expenses cut down to the minimum as he fully expected to bear them himself.

"Very sincerely,
"G. B. Tribble."

Mr. Lewin:—I should like to read now from the minutes of the meeting of the executive committee of the District of Columbia Medical Society held June 6, 1938. First is the letter from Dr. Hooe to the chairman of the executive committee of the District Medical Society, who was Dr. Sprigg, dated May 18, 1938. It reads:

"Dear Doctor Sprigg:

"A letter addressed to Dr. George B. Tribble, under date of May 14, 1938, and sent by registered mail, follows:

And then he quotes the first letter, which has already been read to the jury. Then the following appears:

"Accordingly upon convening Dr. Tribble was presented with the following charges, in writing:"

And then follows that letter which the witness called a report, and which Mr. Leahy took exception to.

Mr. Leahy:—I didn't take exception to the letter. I took exception to it being characterized as a report.

Mr. Lewin:—Well, I won't read that again.

Then the report continues:

"Please find herewith attached complete transcript of the proceedings together with a true copy of a business card filed in the office at Children's Hospital.

"In view of the evidence as therein set forth and in particular consideration of the correspondence therein contained as having occurred between Dr. George B. Tribble and Dr. Henry Rolf Brown, Medical Director of Group Health Association, Inc., we desire to submit to your committee our verdict of guilty as charged (possibly unwittingly), with the recommendation that such disciplinary measure be in turn recommended to the Medical Society as may seem commensurate with the gravity of the offense.

"Respectfully submitted,

"R. Arthur Hooe, M.D.,
"Chairman, Compensation, Contract and
Industrial Medicine Committee."

Mr. Lewin:—Then, in the body of the minutes proper occurs this:

"The complaint against Dr. George B. Tribble was taken up at this point."

Oh, yes, at this meeting with Dr. Sprigg, chairman, presiding, there were present:

"Drs. A. B. Bennett, Daniel L. Borden, C. N. Chipman, Harry Lee Claud, A. C. Gray, Raymond T. Holden Jr., Thomas E. Neill, John A. Reed, E. Hiram Reece, Sterling Ruffin, and Mr. Theodore Wiprud, Executive Secretary.

"The minutes of the preceding meeting of April 25 were read and approved.

"Dr. Sprigg then introduced the new Executive Secretary to the Committee. He also introduced Dr. Fred R. Sanderson, representing the Compensation, Contract and Industrial Medicine Committee. The Chairman, Dr. Sprigg said, was unable to attend.

"The executive Secretary then read a letter from Dr. R. Arthur Hooe, Chairman of the Compensation, Contract and Industrial Medicine Committee, and the transcript of the hearing held by the Committee in connection with charges made against Dr. George B. Tribble.

"The Chairman stated that Dr. Edith Seville Coale wished to be heard, and suggested that the complaint against Dr. Tribble receive attention later in the meeting. This was agreeable to the Committee."

"Dr. Sprigg made a brief statement setting forth his views on the behavior of the Doctor.

"Dr. C. N. Chipman reported that Dr. Macon was waiting to be heard.

"The Chairman was rather surprised and said he did not know that either Dr. E. B. Macon or Dr. George B. Tribble had been invited to attend.

"Dr. E. B. Macon was invited into the meeting and informed by the Chairman that an error had been made and that the Committee did not desire to hear him. The Chairman apologized for causing him inconvenience.

"Some discussion then followed as to the letter Dr. Macon had received from Dr. C. B. Conklin, informing him that he was to be on hand. This letter was circulated among the Committee.

"Upon Dr. Macon's retirement further discussion was held.

"Motion made by Dr. E. Hiram Reece that the letter directed to Dr. Macon be placed in the record of these minutes and that Dr. Sprigg's comments also be included. Motion seconded by Dr. Holden and carried.

"There followed a discussion as to the advisability of inviting Dr. Tribble to a special meeting to be called by the Executive Committee for the purpose of hearing him.

"Dr. A. B. Bennett then stated that he had a letter from Dr. Tribble, directed to the Secretary of the Society, also original letters in connection with the complaint which Dr. Tribble wished returned to him.

"Dr. Sprigg did not think that this material should be introduced at this meeting. However, Committee members were not in agreement in this matter.

"Motion made by Dr. John A. Reed that the letter directed to the Secretary by Dr. George B. Tribble be read. Motion seconded by Dr. Holden and carried.

"Dr. F. X. McGovern requested the privilege of the floor and commented briefly on the letter received from the Compensation, Contract and Industrial Medicine Committee, in which the committee had found Dr. Tribble guilty of unethical conduct. He said that the Committee was out of order in passing judgment; that it was merely a fact-finding committee.

"Dr. Tribble's letter was read, following which there was considerable discussion.

"Motion made by Dr. Holden that the Executive Committee finds Dr. Tribble's explanation adequate and his assurance that he will not in any way knowingly violate the ethics of the profession or the Constitution and By-Laws of the Medical Society in the future satisfactory. For this reason it is their decision that the matter be carried no further; and that Dr. Tribble be informed of the Committee's action. Motion seconded by Dr. Chipman and carried.

"There followed a discussion as to whether or not a physician who treats a patient who is a member of the Group Health Association, Inc., as a private case, but accepts payment from the Group Health Association, is guilty of unethical conduct.

"Dr. Sprigg, in a statement based on the information given him by the Society's attorneys, stated that under these circumstances he would be guilty.

"This was denied by Dr. C. N. Chipman who said that the Executive Committee already had gone on record in resolution, stating that such a relationship was not unethical.

"Dr. F. X. McGovern reviewed the past efforts of himself and his Committee to have the Society take a definite stand on the Group Health Association, making its position clear; that so far he had not been successful in getting the Society to act."

Mr. Lewin:—This witness is with you, Mr. Leahy.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Doctor, I show you what purports to be a copy of a letter, and ask you if you can identify that, please. A.—It sounds like it. I wouldn't say; I don't remember it.

Q.—You did get a letter from Dr. Sprigg? A.—Yes.

Q.—Do you know what you did with that letter? A.—No, sir; threw it in the bucket, I think.

Q.—You didn't keep it? A.—No.

Q.—This sounds like the letter you received? A.—Yes.

Mr. Lewin:—Will you show it to me?

Mr. Leahy:—Yes, here it is.

By Mr. Leahy:

Q.—Well, Doctor, as I understand your testimony, it is this. You were called first by Dr. Hooe before this contract committee? A.—Yes.

Q.—You appeared there for a few minutes? A.—Yes.

Q.—Everything was very informal? A.—Yes.

Q.—And then you were advised by Dr. Hooe that these charges were to be sent on to the executive committee? A.—Yes.

Q.—You never even appeared before that committee? A.—That is correct.

Q.—You turned your letters over to them? A.—Yes.

Q.—And found everything was all right, and that was all? A.—Yes.

TESTIMONY OF ELEANOR HALL

DIRECT EXAMINATION

By Mr. Allen:

Eleanor Hall said she is a clerk in the record room, Eastern Dispensary and Hospital and has been for four and a half years. She identified by-laws of the hospital and Dr. J. Rogers Young's handwriting.

TESTIMONY OF ANNA MARY DENNINGER

DIRECT EXAMINATION

Ann Mary Denninger said she is employed by Dr. Jesse T. Mann and identified his signature.

Mr. Kelleher:—Exhibits 309 and 310, is the questionnaire with the name "Casualty" at the top, and it has been identified as having been written by Dr. Young, the defendant, chief of staff of Casualty Hospital:

EXHIBITS 309 and 310

"Questionnaire.

"1. What communication or inquiry has your hospital had from Group Health Association, Inc.?

"None.

"2. What reply has your hospital made to Group Health Association, Inc.?

"None.

"3. Which, if any of the following Doctors are now members of your Medical Staff in any capacity or have privileges to practice in your hospital?

"Dr. Henry Rolf Brown.

"Dr. Allan E. Lee.

"Dr. Mario Scandiffo.

"Dr. R. Stephen Hulburt.

"Dr. Raymond E. Selders.

"Dr. Edmond D. Wells.

"None.

"4. Is your hospital in sympathy with the policies of The Medical Society of D. C.?

"Yes.

"5. Is the entire Medical Staff of your hospital reappointed annually?

"Yes.

"6. Are appointments to the Medical Staff of your hospital approved by the Medical Staff?

"Yes.

"7. What governing body of your hospital finally makes appointments to the Medical Staff?

"Lay Board.

"8. Does your hospital require membership in the Medical Society of D. C. as a qualification for appointments to its Medical Staff?

"Applicant must be qualified for membership in local Society.

"9. What percentage of the entire medical staff of your hospital are members of the Medical Society of D. C.?

"10. Does your hospital require membership in the A. M. A. as a qualification for appointment to its Medical Staff?

"See No. 8.

"11. What percentage of the entire Medical Staff of your hospital are members of the A. M. A.?

"12. Is your hospital a beneficiary of Community Chest funds?

"No.

"13. Will you kindly make any other inquiry that you think might be pertinent at this time?"

Mr. Kelleher:—Exhibit 579 has been identified as the by-laws of Eastern Dispensary and Casualty Hospital. The Government has offered in evidence Article 2, Section 1, which reads as follows:

EXHIBIT 579

"The applicant for membership shall be,"—let me read the whole thing.

"Article 2, Membership.

"Section 1—Qualification.

"The applicant for membership shall be a graduate of a recognized medical school, legally licensed to practice in the District of Columbia, qualified for membership in the Medical Society of the District of Columbia."

Mr. Kelleher:—Exhibits 300 and 301 is the questionnaire with the word "Sibley" at the top. The answers have been identified as having been made by Dr. Jesse T. Mann:

U. S. EXHIBITS 300 and 301

"Questionnaire.

"1. What communication has your hospital had from Group Health Association, Inc.?

"Asking to admit pt. and those pt. be treated by Dr. Selders.

"2. What reply has your hospital made to Group Health Association, Inc.?

"Non-committal reply.

"3. Which, if any of the following Doctors are now members of your Medical Staff in any capacity or have privileges to practice in your hospital?

"Dr. Henry Rolf Brown.

"Dr. Allan E. Lee. Yes.

"Dr. Mario Scandiffo. Yes.

"Dr. R. Stephen Hulburt.

"Dr. Raymond E. Selders.

"Dr. Edmond D. Wells.

"4. Is your hospital in sympathy with the policies of The Medical Society of D. C.?

"Yes.

"5. Is the entire Medical Staff of your hospital reappointed annually?

"No—only twenty-five members of Medical Council.

"6. Are appointments to the Medical Staff of your hospital approved by the Medical Staff?

"Approved by Medical Council.

"7. What governing body of your hospital finally makes appointments to the Medical Staff?

"Recommended by Medical Council and appointed by Board of Directors.

"8. Does your hospital require membership in the Medical Society of D. C. as a qualification for appointments to its Medical Staff?"

"No.

"9. What percentage of the entire medical staff of your hospital are members of the Medical Society of D. C.?"

"Majority—about 80%.

"10. Does your hospital require membership in the A. M. A. as a qualification for appointment to its Medical Staff?"

"No.

"11. What percentage of the entire Medical Staff of your hospital are members of the A. M. A.?"

"About 80%.

"12. Is your hospital a beneficiary of Community Chest funds?"

"No.

"13. Will you kindly make any other inquiry that you think might be pertinent at this time?"

Mr. Allen:—I wish now to read Exhibit 521, minutes of the regular meeting of the board of directors of the Children's Hospital of the District of Columbia, held Nov. 15, 1937. I will read only the next to the last paragraph on the second page of this minute:

U. S. EXHIBIT 521

"Mr. Drayton read a letter from the Group Health Association with regard to permitting their physicians the courtesy of the Hospital—they not being members of our staff. Mr. Drayton also read a proposed letter from Miss Gibson in answer thereto. The Board approved the proposed letter. Mr. Seal voting present."

I will read the proposed letter attached thereto, date Nov. 15, 1937. It is from Mattie M. Gibson, Superintendent, to William F. Penniman, Group Health Association:

"Dear Mr. Penniman:

"At a meeting of the Board of Directors of the Children's Hospital, held November 15th, I was authorized to reply to your letter of November 8th as follows:

"The Children's Hospital will accept for treatment or hospitalization any patient in need of care, under its charter, rules and regulations.

"This pertains to indigent, semi-indigent, and a very limited number of pay patients—as we have only twenty-seven beds available for pay patients.

"All doctors treating these patients while in the hospital must have staff appointments and be members of local Medical Societies.

"Dr. Raymond E. Sellers has made no application so far for staff appointment."

Mr. Allen:—If it will be satisfactory to defense counsel I will not read Exhibit 359, which is a letter sent by Miss Gibson to Mr. Penniman, dated Nov. 16, 1937. It is quite similar to the one attached to the minutes and approved, with the exception that it doesn't have the word "and be members of the local medical societies."

Mr. Lewin:—Read that paragraph as the letter went to Mr. Penniman.

Mr. Allen:

"All physician treating patients while in the hospital must be members of the Medical or Courtesy Staff, appointments to which are made annually by its Board of Directors after individual examination into the qualifications of applicants by regular hospital channels.

Next I will read Exhibit 522, dated Dec. 6, 1937. It is the minutes of the annual meeting of the incorporators and members of the Children's Hospital of the District of Columbia.

Mr. Lewin:—Before you read that—

THE COURT:—We will stop here.

Mr. Lewin:—I am afraid your Honor if we do we will miss the point. First it is the letter from the District of Columbia Medical Society of December 2, then this by-law.

Mr. Allen:—I will state for the record in this respect that this letter was subpoenaed from the Children's Hospital and it was not produced, but evidence produced against the Medical Society shows it was sent to all the hospitals. I will only read from the center of page 2, the next three paragraphs, this is Exhibit 522:

U. S. EXHIBIT 522

"Upon proper motion, duly seconded, it was unanimously voted to amend Article 33, Medical Staff—of the By-Laws and Rules by adding the following:

"Only physicians, surgeons, and dentists who are licentiates of the District of Columbia and also members of the District Medical Society or ethical body in their locality shall be eligible for appointment to the Medical Staff.

"Physicians, Surgeons, and Dentists not officially connected with the Hospital, but members of their ethical medical societies, may be accorded the privilege of using the facilities of the Hospital as a matter of courtesy for a term that shall continue during the pleasure of the Board of Directors, those accepting such privileges to be known as the Courtesy Staff."

Mr. Leahy:—Was that the annual meeting?

Mr. Lewin:—Yes.

Mr. Allen:—Your Honor, there is one other minute which takes about three short paragraphs. Exhibit 523, dated April 4,

1938, minutes of the meeting of the medical staff of the Children's Hospital. I will read from the fourth paragraph:

U. S. EXHIBIT 523

"Dr. Wall mentioned the letter written by Mr. Drayton to Senator Capper."

Senator Capper is written in handwriting and the words "the newspapers" are stricken out.

"relating to the Group Health situation. Dr. Wall stated that the Board of Directors had supported the Medical Staff in the differences over Group Health.

"Dr. Wall presented a resolution formulated to take care of emergency admissions to the Hospital. It was moved and seconded that this ruling be adopted. After discussion by several members of the Staff, the ruling was adopted.

"Dr. Hagner moved that the Chairman of the Medical Staff get together with the Chairman of the Medical Staffs of other hospitals to adopt uniform rules covering the admission of Group Health patients. Seconded and carried."

Mr. Allen:—And I will say that the rules governing admission of emergency patients is attached thereto, but I will not read it.

MARCH 3—AFTERNOON TESTIMONY OF MRS. CAROLINE REECE EPPERLEY (RECALLED)

Mrs. Epperley, secretary to the Superintendent of Sibley Hospital, identified records from the hospital. She was also asked to identify some signatures.

TESTIMONY OF MRS. CHARLES HARDIN DIRECT EXAMINATION

By Mr. Kelleher:

Mrs. Charles Hardin said she was a member of Group Health Association in 1937. She lives in Arlington, Va., and lived there in 1938.

Q.—Do you have a family membership in G. H. A. which entitled your husband to benefits? A.—I did.

Q.—Did your husband become ill on June 19, 1938? A.—He did.

Q.—Will you tell us the circumstances surrounding his illness, please? A.—He had been feeling not very well for about two days, and late Sunday night the pain became more severe and I thought it necessary to call in a doctor.

Q.—What doctor did you call? A.—I called in Dr. Solet.

Q.—Why did you call Dr. Solet instead of the Group Health Association?

Mr. Leahy:—Objected to as immaterial.

THE COURT:—Objection sustained.

By Mr. Kelleher:

Q.—Had you ever called Group Health Association before?

A.—I had not.

Q.—Did Dr. Solet come over to see the patient? A.—He did.

Q.—Did you know Dr. Solet before? A.—No; I did not.

Q.—Did he examine Mr. Hardin? A.—Yes.

Q.—What was his diagnosis?

Mr. Leahy:—I object.

THE COURT:—Objection sustained.

By Mr. Kelleher:

Q.—Did Dr. Solet ask that a surgeon be called in? A.—Yes, sir.

Mr. Leahy:—I object.

THE COURT:—Objection sustained.

By Mr. Kelleher:

Q.—Was another doctor called in? A.—Yes; he was.

Q.—What was his name? A.—Dr. Bachrach.

Q.—What is his specialty? A.—I don't know. He is a surgeon.

Q.—What occurred after those two doctors saw the patient? A.—They said he had—

Mr. Leahy:—I object to what was said.

By Mr. Kelleher:

Q.—What occurred?

THE COURT:—Counsel means, what did they do? A.—He was taken to the hospital for an emergency operation.

By Mr. Kelleher:

Q.—What hospital? A.—Sibley.

Q.—Sibley Memorial Hospital? A.—That is right.

Q.—Before leaving the house did you make a telephone call?

A.—I did.

Q.—Whom did you call? A.—My brother.

Q.—Was your brother also a member of Group Health Association? A.—Yes; he was a charter member.

Q.—Did you meet your brother at the hospital? A.—I did. I asked him to come there.

Q.—Did you meet him there? A.—Yes.

Q.—Was Mr. Hardin operated upon? A.—Yes; he was.

Q.—Prior to the operation did you have a telephone conversation with Dr. Selders from the hospital? A.—Yes; I did.

Q.—Dr. Selders was the Group Health Surgeon? A.—That is right.

Q.—Will you tell us whether Dr. Selders made any suggestion about—

Mr. Richardson:—Just a minute, please.

Mr. Kelleher:—Let me ask the question.

Mr. Richardson:—The question is leading and suggestive.

THE COURT:—Do not answer that question until I rule on it. You may finish the question.

By Mr. Kelleher:

Q.—Can you tell us whether Dr. Selders made any statement about moving the patient from Sibley Memorial Hospital?

Mr. Leahy:—I object.

THE COURT:—Objection sustained.

By Mr. Kelleher:

Q.—Was the patient operated on in Sibley Memorial Hospital? A.—He was.

Q.—By whom? A.—Dr. Bachrach.

Q.—Who authorized Dr. Bachrach to operate upon your husband?

Mr. Leahy:—I object, as immaterial.

THE COURT:—Objection sustained.

By Mr. Kelleher:

Q.—After your husband had been operated upon and after he had recovered, what instructions did you leave at the office of Sibley Memorial Hospital as to the bill?

Mr. Leahy:—I object, as immaterial.

THE COURT:—Is this one of those cases referred to in the letters between Group Health and certain physicians?

Mr. Kelleher:—No, your honor. But this is another instance—

THE COURT:—Maybe you had better step here.

(Counsel for the respective parties approached the bench.)

(Counsel resumed their places):

By Mr. Kelleher:

Q.—I will repeat the last question which I asked you. What instructions, if any, did you give the cashier of the hospital concerning your hospital bill after your husband had recovered from his operation? A.—I asked that she send the bill to Group Health Association, of which I was a member.

Q.—What was her response? A.—She said that she had contracted with me and not with Group Health, and therefore it was my bill, and she had nothing to do with Group Health.

Q.—How did you pay the bill? A.—I went to the president of Group Health Association, Mr. Kirkpatrick, who had asked me to have the bill sent to him—

Mr. Leahy:—I object to any conversation.

By Mr. Kelleher:

Q.—Just tell the jury how you paid the bill. A.—In cash, which Mr. Kirkpatrick gave me.

Mr. Kelleher:—That is all—with the privilege of recalling the witness.

Mr. Leahy:—No questions.

THE COURT:—She may remain.

Mr. Kelleher:—Will you remain until after your brother takes the stand, please?

The Witness:—Yes.

(The witness left the stand and retired to the witness room.)

TESTIMONY OF SHERWOOD K. BOOTH

DIRECT EXAMINATION

By Mr. Kelleher:

Sherwood K. Booth said he lives in Arlington, Virginia.

Q.—Were you a member of Group Health Association in June, 1938? A.—I was.

Q.—On June 19, 1938, did you receive a telephone call from your sister? A.—I did.

Q.—What did you do as result of that call? A.—As a result of that call I went to the Sibley Hospital to see my sister and my brother-in-law who was going there for an emergency operation for appendicitis.

Q.—What was the name of your sister? A.—Mrs. Charles G. Hardin, Jr.

Q.—Will you tell us what occurred at the hospital when you arrived there? A.—I arrived at the hospital just a minute or so before my sister and my brother-in-law arrived there, and immediately upon their arrival I spoke to the night supervisor or the night superintendent—anyway, the person in charge—and her name was Miss Realini—to ascertain whether a Group Health surgeon would be permitted to operate on my brother-in-law. Miss Realini replied that Group Health—

Mr. Leahy:—I object to that, if your Honor please.

THE COURT:—Objection overruled. Can you identify the doctor in the case, if a doctor's name was mentioned?

Mr. Leahy:—Some young lady, he is talking about.

THE COURT:—This gentleman said that he inquired of this lady about the Group Health doctor. I was wondering whether the name of a particular doctor was mentioned.

By Mr. Kelleher:

Q.—Was the name of a particular doctor mentioned? A.—Yes; it was.

Q.—What was the name of the doctor? A.—The name of the doctor was Dr. Selders, who was at that time the chief surgeon on the staff of Group Health Association.

Q.—Will you continue with your testimony concerning this conversation with Miss Realini? A.—As soon as my brother-in-law arrived there I immediately went to the desk on his behalf to find out whether it would be agreeable to the hospital to have Dr. Selders operate on him. Miss Realini replied that she was very sorry, but that Group Health doctors were not permitted to operate in that hospital. I explained to her the emergency of the case, but from the circumstances she was well aware of that. But she said it did not make any difference whatsoever, regardless of the events; she was terribly sorry, but she was without authority to permit a Group Health doctor to come in there.

I mentioned the fact that Dr. Selders was the name of the doctor who was to do the operating. She again reaffirmed her previous statement and, as I recall, she had a slip of paper on the desk, on her side of the desk, and she referred to that, and upon doing so she again stated that she was awfully sorry, but Dr. Selders would not be permitted to operate.

Q.—Then what did you do, after this conversation? A.—Thereupon I, in her presence, immediately called up Dr. Selders on the telephone and explained the circumstances to him in the hope that—

Mr. Leahy:—I object.

THE COURT:—Just tell us what was said.

The Witness:—I called Dr. Selders on the 'phone, explained the circumstances to him, and that we wanted him to operate in this case, and in reply he stated—

Mr. Leahy:—I object to the conversation.

THE COURT:—Was the substance conveyed to this lady?

The Witness:—It was.

THE COURT:—I think you might state what you stated to the lady as coming from the doctor.

The Witness:—I mentioned to Dr. Selders that we would like—

Mr. Leahy:—I object to that. Just tell what you told the lady.

By Mr. Kelleher:

Q.—Did Dr. Selders request to speak to anybody?

THE COURT:—No. He can state what he reported to Miss Realini as to what Dr. Selders said.

After having this conversation, what did you report, if anything, to this lady?

The Witness:—I mentioned to Miss Realini that Dr. Selders said he could come there in ten minutes and operate on the patient. Thereupon Miss Realini replied that she was terribly sorry but, as she said before, he could not operate. Thereupon Dr. Selders asked me over the 'phone to hand the 'phone to Miss Realini.

Mr. Leahy:—I object.

THE COURT:—Yes. It is the conversation between these two people that should be given.

By Mr. Kelleher:

Q.—Did you tell Miss Realini that Dr. Selders wanted to speak to her? A.—Yes.

Q.—Did she take the telephone and speak to Dr. Selders? A.—Yes. I was sitting in front of Miss Realini and I handed the 'phone over to her and she spoke to Dr. Selders in my presence.

Q.—What did she say? A.—She told Dr. Selders, in a very congenial way, but very firmly, that she was terribly sorry, but

that he would not be permitted to operate in that hospital, being a Group Health doctor.

Q.—Did she have this slip of paper which you mentioned before? A.—She did. She still had that in front of her.

Q.—Was there anything more said? A.—I don't think so. The conversation, of course, was between them, and I heard her end of the conversation.

Q.—After this conversation did you receive another telephone call? A.—Yes. The 'phone was no more than hung up and it rang again and it was Dr. Selders calling back and he asked to speak to me.

Q.—Did you speak with him? A.—I did.

Q.—Did you tell Miss Realini what Dr. Selders said on this occasion? A.—I did.

Q.—Will you tell us what you told Miss Realini Dr. Selders said? A.—Yes. I told Miss Realini that Dr. Selders called again wanting to discuss the advisability of having the patient moved to Casualty Hospital; that Dr. Selders had told me that if the patient were moved there there was a reasonable likelihood that he could operate on the patient at Casualty Hospital he was not sure, but he thought he might be able to make such arrangements.

Q.—What did Miss Realini say? A.—Miss Realini did not have much to say. Of course she understood it was—

Mr. Leahy:—I object to the conclusion.

THE COURT:—Wh: did she say?

The Witness:—She had nothing more to say to that except that I mentioned to her that I was awfully sorry that the Group Health doctor could not operate, and she again explained her position, that she was the night supervisor of the hospital, but she had her orders as to those who were on the courtesy list, and she was sorry, but there was nothing she could do about it.

By Mr. Kelleher:

Q.—Did your sister talk with Dr. Selders over the telephone? A.—She did.

Q.—Was that in your presence and in the presence of Miss Realini? A.—That was in the presence of both of us; yes.

Q.—What did your sister say? A.—This was the second 'phone call with Dr. Selders, and my sister explained to Dr. Selders the situation, that the doctors had told her that he should be operated on immediately and that they were taking his blood count and preparing him for the operation, for whoever would operate on him, and explained to Dr. Selders the situation so he would realize the fact that it would not be reasonable to move the patient.

Q.—And in the presence of you and Miss Realini did she take any position one way or the other as to moving the patient from Sibney Memorial Hospital to Casualty?

THE COURT:—He has just said that. The witness just said she explained to Dr. Selders that the case was too urgent to consider moving him.

Is that about the substance of it?

The Witness:—Yes, your Honor.

By Mr. Kelleher:

Q.—Had you employed Dr. Bachrach to operate upon the patient prior to these telephone calls that you have just testified about? A.—I did not.

Q.—After these telephone calls did you authorize Dr. Bachrach to perform the operation? A.—Not specifically, for the reason that I was the brother-in-law of the person who was to be operated on. The final authorization naturally would be given by my sister, who was his wife.

Q.—Did she give that authorization? A.—After she talked to Dr. Selders the second time she went up and gave that authorization. However, I went upstairs also and stated to Dr. Bachrach that inasmuch as the Group Health doctor was not—

Mr. Leahy:—I object to the conversation.

THE COURT:—Yes. I think it is merely a question of whether Dr. Bachrach was to operate.

By Mr. Kelleher:

Q.—Do you know whether your sister had authorized Dr. Bachrach to operate upon the patient prior to these telephone calls with Dr. Selders? A.—I know she did not. It was understood, however, from my conversation with my sister, that this doctor, Dr. Bachrach, would be given the authority to operate in the event that we were unsuccessful in having the hospital's permission to have a Group Health doctor operate.

Mr. Kelleher:—That is all, Mr. Leahy.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Did you know Dr. Bachrach personally? A.—I did not.

Q.—Did you know that your brother-in-law was sick before you were notified by 'phone to that effect? A.—I did not.

Q.—As I understand it, then, you got a telephone message that your brother-in-law was sick and was at Sibley Hospital? A.—No. I received a telephone message on Sunday evening about 11 o'clock from my sister to the effect that they were leaving immediately to go to Sibley Hospital; that they had called in a local doctor; my brother-in-law was severely ill and they had called in a local doctor and found out it was appendicitis, and the doctor had advised her that he would have to be operated on immediately, and therefore she asked me—

THE COURT:—I do not think we need all these details.

By Mr. Leahy:

Q.—What time was it when you got to the hospital, as you recall? A.—I don't recall specifically the time, but I do know it was close to midnight on Sunday.

Q.—When you got there who was with your brother-in-law? A.—When I got there nobody was with my brother-in-law.

Q.—How long were you there before your brother-in-law came? A.—About a minute or two.

Q.—When he came who was with him? My sister; and at the same time Dr. Solet came in. I believe he had brought them over.

Q.—Any other doctor? A.—Concurrently this Dr. Bachrach came in, but I don't believe that he came along with them. I could not testify to that.

Q.—Was Dr. Bachrach there within a minute or two or three minutes? A.—He was there very, very shortly; yes.

Q.—In other words, it looked as though Dr. Bachrach, Dr. Solet, your sister and her husband all got there about the same time? A.—Approximately the same time. However, I believe that Dr. Solet and my sister and my brother-in-law were there first. Of course this was three years ago, and it is pretty hard to remember all the details.

Q.—But there was not any appreciable length of time? A.—No, sir.

Q.—In fact, while you were downstairs talking on the telephone Dr. Bachrach and Dr. Solet were up taking your brother-in-law's blood count, were they not? A.—I don't know what they were doing. I know they were upstairs.

Q.—Did you not say they were getting ready for the operation at that time? A.—That is right.

Q.—And Dr. Bachrach, while you were there talking to Dr. Selders, was upstairs with your sister and your brother-in-law? A.—That is right.

Q.—Did Miss Realini— A.—Excuse me. I am not sure that the doctor was with my brother-in-law. All I know is that they were all upstairs.

Q.—You got word, did you, that they were preparing the operating room and taking his blood count and things of that sort? A.—That is correct.

Q.—In fact, you got word that the operation was so imminent at the time that you did not feel that he should be moved from one hospital to the other? A.—That is correct.

Q.—Was Miss Realini—was that the name of the young lady with whom you were speaking? A.—Yes; it was.

Q.—Did you say she was night superintendent? A.—She was the nurse in charge in the evening. Her title was Night Supervisor or Night Superintendent. She was the person in charge.

Q.—When you chatted with her and asked her whether or not Dr. Selders could operate in Sibley Hospital, she told you that she was awfully sorry, but that he was not on the courtesy staff? A.—That is right, and she further stated that being a Group Health doctor he could not operate there.

Q.—She also stated to you that he was not on the courtesy staff? A.—That is correct.

Q.—Did you know whether or not he was on the courtesy staff before you went to the hospital? A.—I didn't; no. I had reason to feel, however—

Q.—Well, you did not know? A.—I did not know.

Q.—Do you know whether your sister knew whether he was on the courtesy staff when she went to the hospital?

Mr. Kelleher:—I object. How would this witness know that?

By Mr. Leahy:

Q.—Just yes or no. A.—Will you repeat that question, please?

Q.—Do you know whether or not your sister knew whether Dr. Selders was on the courtesy staff of Sibley when your brother-in-law went there? A.—She did not know, to my knowledge.

Q.—Did you know Dr. Solet before that evening? A.—I did not.

Q.—Is he a doctor in Arlington? A.—He was at that time, I understand.

Q.—Do you know whether or not he is still there? A.—I really don't know.

Q.—Dr. Bachrach operated on your brother-in-law, did he not? A.—That is correct.

Q.—And he was out in four or five days, was he? A.—In about a week's time, I believe. I am not sure as to the time.

Mr. Kelleher:—We now offer in evidence Exhibits 580, 581 and 582, which are the hospital records in the Hardin case.

THE COURT:—Very well. Are there any objections to these?

Mr. Leahy:—No special objection; no.

Material Appendix 201 M

Clinical Diagnosis or comment Acute appendicitis

Sections: Frozen

Embedded

DIAGNOSIS: ACUTE CATARRHAL APPENDICITIS
TISSUE DESCRIPTION:

The appendix is highly congested and covered with dilated vessels as well as tortuous ones of long standing. The organ measures 8 cm. in length by 0.9 cm. in diameter and on section cuts with slight resistance revealing an ovoid, broadly dilated lumen filled with catarrhal exudate. The mucosa is partially eroded and the submucous and muscular coats are thickened and edematous. The picture presented is that of an acute exacerbation of a chronically inflamed organ.

Reported:

Oscar B. Hunter, M.D., Pathologist"

TESTIMONY OF JAMES ROBERT ADAMS
DIRECT EXAMINATION

By Mr. Kelleher:

James Robert Adams said he knows Miss Elizabeth Tew who in 1938 lived at 2127 California Street Northwest.

Q.—Will you tell the jury what occurred on the evening of Feb. 26, 1938? A.—About 7 o'clock in the evening I had a telephone call requesting that I go with Miss Tew and Miss O'Connor to the hospital. It seems that she had been seriously ill and it was necessary to go to the hospital under the doctor's orders. So I proceeded to dress and called a cab.

Q.—Where did she live? A.—Apartment 315, I believe it was; the same apartment house. I called a cab and assisted Miss Tew to the elevator and out into the cab and over to the hospital, and while arrangements were being made for her entry into the hospital I held Miss Tew and supported her and took her upstairs to the room assigned to her.

Q.—What hospital was this? A.—Garfield. I remained in the room for a few minutes and left the room while they prepared Miss Tew for bed. During that time I was outside in the lobby or the corridor of the hospital. I later reentered the room, after she had been placed in bed, and an intern came in and made an examination, at the time taking her blood pressure and asking questions. Some of them I did not overhear. I stayed there until about 8 o'clock, and along about 8:15 they gave her an injection of morphine and I remained in the room until about 10 o'clock, at which time Dr. Selders and Miss O'Connor came back into the room and said that the operation would not be performed that night. Shortly after that Dr. Dugan, another doctor, and a nurse came into the room and said that the privileges of the hospital had not been extended—

Mr. Leahy:—I object.

By Mr. Kelleher:

Q.—Who was Dr. Dugan? A.—I thought he was a hospital physician.

Mr. Lewin:—It is already in evidence that he was the assistant resident in surgery at Garfield Hospital at that time.

By Mr. Kelleher:

Q.—Will you now tell us what Dr. Dugan said? A.—Dr. Dugan said that the privileges of the hospital had not been extended to Dr. Selders, since he was a member of the Group Health Association, and that the operation could not be performed by Dr. Selders. He extended the facilities of the staff of Garfield Hospital. Miss Tew refused any of the staff surgeons.

Q.—What suggestion did Dr. Dugan make in that connection? A.—He asked at that time if Miss Tew would sign a release in order to leave the hospital. Upon advice she refused to sign a release, and then the release was read.

Q.—After Miss Tew had received the injection of morphine did she lose consciousness? A.—She lost absolute consciousness for about thirty minutes. Otherwise she was in what I would call a semi-stupor.

Q.—Was she conscious when Dr. Dugan came into the room? A.—She was in a stupefied condition.

Q.—Have you testified whether Miss Tew signed or declined to sign a release? A.—She refused to sign a release.

Q.—I show you Government Exhibit 584 for identification and ask you if you can identify that as the release which Dr. Dugan requested Miss Tew to sign. A.—I cannot identify it by the paper, but I can by the language of it.

Q.—Was it read out loud in your presence? A.—It was.

Q.—What occurred after Dr. Dugan left the room? A.—I went down to see Dr. Selders who was present and asked if he could—

Mr. Leahy:—I object to any conversation.

A.—(Continuing). It was the request of the doctor—

THE COURT:—Just a moment.

By Mr. Kelleher:

Q.—Just tell us what occurred in Miss Tew's room. A.—It was nothing, except she remained in a stupefied condition until about 11 o'clock, when Dr. Dugan returned.

Q.—What did Dr. Dugan say when he returned? A.—He again offered the services of the staff and suggested to Miss Tew that she secure the services of another surgeon before being operated on by Dr. Selders. We remained there until about 12 o'clock, at which time I left the room long enough for Miss Tew to be dressed and then took her down the hall, leaving the hospital. The nurse came with a wheel chair and took her to the front door. In the meantime a cab had been called and was waiting for us. It was necessary to set Miss Tew upon the steps of the hospital before putting her into the cab. She was in more or less of a nauseated condition and was unable to make the effort even to get into the cab.

Q.—How long did she stay out on the steps of the hospital? A.—About ten to fifteen minutes at least.

Q.—Was it a cold night? A.—It was very cold. The cab was heated, and we immediately proceeded back to 2127 California Street, but she was unconscious on the ride and remained in a stupefied condition until we got back there and she was assisted into her apartment, and while she was being prepared for bed I was in the kitchen cracking ice upon recommendation of the physician that an ice-bag be placed upon her.

CROSS EXAMINATION

By Mr. Leahy:

Q.—You stated that you had received a telephone call to go up to Miss Tew's apartment. Who was it that 'phoned you? A.—Miss Davis or Miss O'Connor.

Q.—Did you know Miss O'Connor? A.—Yes, sir.

Q.—How long have you known Miss O'Connor? A.—Since 1936.

Q.—How long have you known Miss Davis? A.—Miss Davis and Miss O'Connor are the same person.

Q.—Is it Mrs. O'Connor? A.—It was Mrs. I believe it is now Miss Davis; and at one time she was known as Miss O'Connor around the office where she worked.

Q.—In what office did she work? A.—Work Projects Administration.

Q.—Is that the place you worked in? A.—Yes.

Q.—In what capacity did you work there? A.—Junior Administrative Assistant.

Q.—To whom? A.—To Frank A. March, Director of the Project Control Division.

Q.—Had you known Miss Tew before? A.—I became acquainted with Miss Tew through Miss Davis, about a year or a year and a half before that; I think it was about a year.

Q.—Did you know Miss Tew pretty well? A.—Yes, sir.

Q.—Were you going with her? A.—No, sir.

Q.—Just a friend? A.—Yes.

Q.—Had you ever called on her before? A.—No, sir.

Q.—Just saw her around the office working? A.—Miss Tew did not work in the W. P. A., sir.

Q.—Did you just see her in the apartment house? A.—Yes, sir.

Q.—But you had never been friendly with her in the sense that you had called at the apartment? A.—She and Miss Davis had an apartment together at one time at 2000 Connecticut Avenue and also, later on, at 2127 California Street, and I visited the apartment at both places.

Q.—Miss Davis is the one who called you on the 'phone and asked you to go up to Miss Tew's apartment? A.—Yes.

Q.—She was not living then with Miss Tew? A.—Yes.

Q.—So Miss Davis called you from Miss Tew's apartment to come up? A.—Yes.

Q.—And asked if you were going to the hospital; is that right? A.—That they were going to the hospital, and asked if I would go over with them.

Q.—About what time was that? A.—About 7 o'clock in the evening, sir.

Q.—You were not in bed then, were you? A.—No, sir.

Q.—What date was it; do you remember? A.—Feb. 26, 1938.

Q.—Did they say what hospital they were going to? A.—After I got up there they told me they were going to Garfield.

Q.—Who had made the arrangements; do you know? A.—I was not present when the arrangements were made, sir.

Q.—You did not know who it was until you started for Garfield? A.—I understood that Dr. Selders had made the arrangements.

Q.—Who told you about that? A.—Miss Davis.

Q.—And you then went over to Garfield Hospital with Miss Tew? A.—Yes, sir.

Q.—Did you know Dr. Selders personally? A.—No, sir.

Q.—Had you ever seen him before that night? A.—I don't believe I had.

Q.—Were you familiar at all with the rules and regulations of this hospital? A.—To the extent that you have to be entered; that privileges are extended to outside doctors who are not on their staffs if they conform to the rules and regulations.

Q.—Did you know anything about the courtesy staff at the hospital? A.—No, sir.

Q.—Now, who entered Miss Tew at the hospital, the Garfield Hospital? A.—Miss Davis for Group Health group hospitalization. She had both cards. Miss Tew was a member of both organizations.

Q.—To whom were those credentials submitted? A.—I believe to the nurse at the entrance desk.

Q.—Now that nurse at the entering cage saw that she was a member of Group Health Association? A.—Yes.

Q.—And no question was raised at that time by her as to being a member of Group Health Association? A.—No, sir.

Q.—She was immediately assigned to a room? A.—Yes.

Q.—And preparations immediately begun to take care of her for an operation? A.—Yes.

Q.—Did you see any injection given to her? A.—Yes, morphine.

Q.—Did you see the intern give her that? A.—Yes.

Q.—Do you know who that intern was? A.—I couldn't tell his name.

Q.—Did you hear his name that night? A.—I thought Dr. Dugan. There were two interns that came in there in my presence. I don't know whether it was Dr. Dugan. I do know it wasn't the first intern that came in. I didn't hear either name mentioned prior to 10 o'clock.

Q.—Do you know which one it was that gave the injection? A.—The second one.

Q.—Was that Dr. Dugan? A.—I do not know, sir.

Q.—Do you know Dr. Dugan? A.—I heard his name given at 10 o'clock, as Dr. Dugan.

Q.—Was the man whom you heard referred to as Dr. Dugan the one that you saw giving the injection earlier? A.—I presume so.

Q.—And did he make an examination of Miss Tew? A.—Yes.

Q.—Do you recall when it was that he made this examination at Miss Tew's bedside, a half hour, an hour, or an hour and a half earlier? A.—I recall two examinations. One when the intern or doctor came in there; presumably an intern because he was dressed in hospital white. He took her blood pressure and asked her some questions. There was a second one who came in and made a more or less superficial examination of her.

Q.—Was that Dr. Dugan? A.—I am not positive.

Q.—Do you remember when you first saw the individual whom you later learned was Dr. Dugan? A.—Will you repeat your question?

Q.—Do you remember when you first saw the person whom you later learned was Dr. Dugan? A.—I believe I first saw him down in the room prior to 10 o'clock. I presume he was the one that gave the injection.

Q.—When was it that you first saw Dr. Selders there? A.—He met us in the lobby of the hospital and he immediately left to prepare himself for the operation.

Q.—He met you in the lobby at what time? A.—It was about 7:30 or 7:45 when we arrived there.

Q.—When did you see him the second time? A.—I didn't see him a second time until he came in the room about 10 o'clock.

Q.—And at that time was Dr. Dugan in the room? A.—Not immediately. Dr. Selders and Miss Davis came in first. Dr. Dugan and another doctor, whom I did not know by name, and a nurse, followed within a few minutes.

Q.—How many minutes do you mean, two or three? A.—That is all.

Q.—And that is when you heard Dr. Dugan say that Dr. Selders was not on the staff? A.—Yes.

Q.—And he couldn't operate because he was not on the staff? A.—Yes.

Q.—And Dr. Dugan said, "You can have anyone on the staff of Garfield to operate?" A.—Yes.

Q.—And at that time Miss Tew said, "No"; she wouldn't take anybody from the staff of Garfield? A.—Correct.

Q.—Were any names mentioned of doctors on the staff? A.—I believe there might have been one or two names of staff physicians.

Q.—You can't recall them now? A.—No.

Q.—How long do you think this conversation lasted in the room, when Dr. Dugan said you can have anybody on the staff of Garfield for the operation? A.—I doubt if it was much more than five minutes; it was at least five minutes but hardly much more than that.

Q.—Was that the time also that Dr. Dugan said he would like to have her sign the release? A.—Yes.

Q.—He told her it was perfectly all right for her to remain in the hospital, but that Dr. Selders, not being on their staff, couldn't operate there in the hospital? A.—I don't know that he made that statement; I don't remember.

Q.—Do you know why it was he asked her to sign the release? A.—I presume he wanted it in case anything happened. She was going to leave and he wanted the release because she told him she was going to leave, to free them of responsibility in case anything happened to her.

Q.—In other words, she said she was leaving the hospital; she would leave the hospital before she would permit any other member of the staff to operate on her? A.—I wouldn't remember whether she said that.

Q.—Didn't she say she would leave the hospital; that she would not permit any other doctor on the Garfield staff to operate on her? A.—She said she would not leave one of the doctors operate, if necessary she would leave the hospital. And she proceeded to leave the hospital.

Q.—How long after that? A.—Two hours.

Q.—And before she left the hospital did Dr. Dugan then say to her, "You can have anybody on the staff operate on you"? A.—That is right.

Q.—And she again said, "No," she would leave the hospital? A.—Yes.

Q.—Did Dr. Dugan advise her not to leave the hospital? A.—No, sir, I don't think he did.

Q.—Did he read over what he wished Miss Tew to sign? A.—He read aloud the release.

Q.—What? A.—He read aloud the release.

Q.—Do you remember that as he read the release you heard him say, as to the statement which was contained in the release, "I hereby acknowledge Miss Elizabeth Tew is leaving the Garfield Memorial Hospital against the advice of the attending physician, and that I assume no responsibility for the risk in so doing." Do you remember that? A.—If that is the language that I just saw in this document here, then that is what he read aloud.

Q.—Don't you remember that he advised against her leaving the hospital? A.—No, sir.

Q.—Do you remember any conversation that took place there? A.—That was about all the conversation amounted to; the fact that he came in and said that the privileges of the hospital had not been extended to Dr. Selders, and Dr. Selders could not operate; and then, on request, he read the release aloud. He asked her to sign the release first. She refused to sign the release, and then the release was read aloud.

Q.—Who told her not to sign it? A.—Dr. Selders and Miss Davis.

Q.—Dr. Selders was there all the time while this was going on? A.—Yes.

Q.—Do you remember about what time this was? A.—Just about ten o'clock.

Q.—Who is Miss Ruby M. Marsh? A.—I don't know her, sir. Mr. Leahy:—Have we that report, Exhibit 488 in evidence? Mr. Lewin:—No, it has not been offered in evidence yet.

By Mr. Leahy:

Q.—How long after this incident about her refusing to sign this release was it that she left Garfield Hospital? A.—About two hours.

Q.—So it was about midnight? A.—Yes.

Q.—Was it Miss Marsh that obtained for her the chair you spoke about? A.—I don't know her name, other than that she is a nurse, and a nurse obtained the chair.

Q.—You say she went outside? A.—Yes.

Q.—And it was a cold night? A.—Yes.

Q.—And she was on the porch? A.—Sitting on the steps of the hospital about ten or fifteen minutes.

Q.—Who was with her then? A.—Miss Davis and myself.

Q.—Had you ordered a cab? A.—We were proceeding to leave the hospital—the cab was waiting there. Miss Tew left the wheel chair at the door of the hospital. She got out there, and she was unable to go any further. She stayed on the steps there for ten or fifteen minutes.

Q.—Did you ask anybody to go back in the hospital with her? A.—No, sir.

Q.—You just sat there with her? A.—I was not sitting.

Q.—Was the cab waiting there in front of you? A.—Yes.

Q.—You didn't try to help her in the cab? A.—I was unable to get her in. She was nauseated and felt she was going to be sick.

Q.—Was she? A.—No, sir.

Q.—Did you get her home? A.—Yes.

Q.—What time did you reach home? A.—Ten or fifteen minutes later.

Q.—Was she able to get out of the cab? A.—We assisted her into the house and up to her apartment.

Q.—Did she have to sit on the apartment house steps ten or fifteen minutes? A.—No, sir.

Q.—She was able to get into her apartment? A.—With support.

Q.—Did you remain in that apartment that evening? A.—Yes.

Q.—How long did you remain there? A.—I would not want to say. I went out while Miss Davis was preparing her for bed, went out for some cracked ice in the kitchen.

Q.—Who was it said to crack the ice? A.—Dr. Selders had said that an ice pack should be given to her.

Q.—Was that while you were all up in the room? A.—No, sir; Dr. Selders returned to the room before he left the hospital.

Q.—Do you recall whether the intern came back at all into that room that night? A.—I don't recall anyone other than the group, as I have mentioned them, that came in after Dr. Selders and Miss Davis, about ten o'clock, and Dr. Dugan returning later. I don't recall any other intern coming in there.

Q.—You said something with reference to a doctor having made a suggestion that Miss Tew have another examination. A.—That was Dr. Dugan, about 11 o'clock. At that time he re-offered the facilities of the staff, and he made that suggestion.

Q.—You remember just before you left what he said? A.—He suggested that in any event that she should secure the services of another physician and surgeon.

Q.—Did he say "another physician and surgeon" or another examination? A.—He said another physician and surgeon.

Q.—You remember that distinctly? A.—Yes.

Q.—Did you go with Miss Tew when you brought her to her apartment that night? A.—Yes.

Q.—What time did you leave her apartment? A.—Approximately about a half hour, perhaps.

Q.—And she then had with her Miss O'Connor? A.—Yes.

Q.—And that is the end of it, so far as you know? A.—That was the end of it so far as that night was concerned.

TESTIMONY OF PEGGY O'CONNOR

By Mr. Kelleher:

Miss Peggy O'Connor, sometimes known as Miss Davis, said she lived with Miss Elizabeth Tew in February of 1938. Miss Tew became ill during that month, on the 19th.

Q.—What did you do when you learned she was ill? A.—I think I met her after work. She was at home in bed. I first called the Group Health medical doctor.

Q.—Was Miss Tew a member of that organization? A.—Yes, and later the medical doctor called the surgeon. He felt it was a case that called for an operation, and they in turn called Dr. Selders in that evening.

Q.—What was the name of the doctor? A.—That I can't recall.

Q.—Was it Dr. Richardson. A.—I can't recall.

Q.—But the surgeon was Dr. Selders? A.—Yes.

Q.—What occurred after that? A.—He made a thorough examination and said—

Mr. Leahy:—I object to what he said.

THE COURT:—Sustained.

THE WITNESS:—She had an acute case of appendicitis.

Mr. Leahy:—Same objection

THE COURT:—Do not repeat the conversation.

By Mr. Kelleher:

Q.—Was it on the 19th of February when she first became ill? A.—She became ill, I think, it was on a Saturday afternoon. I met her at work and took her home. On Sunday he was called in, this medical doctor, and the surgeon was called in within an hour after he came, and made this medical examination. He then stated that—

Mr. Leahy:—Objection.

Mr. Kelleher:—Don't tell us what Dr. Selders said.

By Mr. Kelleher:

Q.—After Dr. Selders saw her what occurred, do you know? What did you do and what was done? A.—He put an ice pack on her stomach and side.

Q.—Did she go to the hospital that night? A.—No, she remained there in the apartment four or five days, the exact number of days I am not sure about.

Q.—And then was Dr. Selders called again? A.—Yes, he was in to see her every day and the case had subsided, that was the statement he made.

Q.—And after he had seen her through the latter part of the week, what did you and Miss Tew do? A.—She became worse. I called someone at Group Health headquarters, someone connected with it at that time, and told them I thought something should be done. She had been lying there with soups and liquids and water, and I thought something should be done.

Q.—On February 26, did you and Miss Tew go to Garfield Hospital? A.—Yes, we did at Dr. Selders' direction.

Q.—Who arranged for the admission? A.—Dr. Selders.

Q.—Did you have any negotiations at the desk? A.—Yes, I did.

Q.—What were they? A.—I had credentials showing she was a member of Group Health. She was admitted and the room assigned to her. I took her to a room, Miss Marsh, the nurse and I.

Q.—Both of you? A.—Yes.

Q.—And were you there when an intern examined her? A.—Yes, I saw him talking with her about the case for a couple of minutes and then another doctor came in, I think Dr. Dugan.

Q.—What did he do? A.—He gave her a thorough examination—about a three minute examination—and then left the room and the nurse came in.

Q.—Then what occurred? A.—She had been given morphine, just how, I do not know; and she was under it and, in fact, she became unconscious, went out of her head. In forty minutes the nurse came in and stayed there a few minutes. I left the room and went down to the desk and inquired at the information desk, the switchboard operator, inquired as to where I could locate Dr. Selders. She said he was in the operating room. She handed me a phone and some one got Dr. Selders on the wire. He said, "We are in the operating room." I said, "I would like to talk to you." He said, "Come down if you wish. I will meet you."

Q.—Did you go? A.—Yes, but unfortunately they were in the operating room, both dressed for operation.

Q.—Did you go in the operating room? A.—Yes, but I had to come out immediately.

Q.—Who was in the operating room? A.—Dr. Dugan and Dr. Selders, both dressed for an operation. One was scrubbed for an operation.

Q.—What was said in that room? A.—I asked why they were prolonging the operation. Dr. Selders said he was not permitted to operate because he was a member of the staff of Group Health, and Dr. Dugan said, after examining this case, he didn't find it acute; and Dr. Selders repeated this statement, "He refuses to let me operate until he gets authority." I said "this is no time to argue whether it is acute or not acute. Dr. Selders has examined her and has pronounced it acute; and I wish something could be done about it." They walked to an ante room and discussed the pros and cons of some medical book that meant nothing to me; I couldn't understand it. In the meantime, let's see; I think Dr. Selders spoke to me. He said, "There is nothing I can do." I said, "Isn't this acute?" And he said, "Yes, it is definitely so."

Q.—Did Dr. Dugan suggest to you that some other doctor perform the operation? A.—Well, I left the operating room and went upstairs and Dr. Selders followed behind, with Dr. Dugan. While Dr. Dugan was coming, I said, "It isn't necessary for you to come along." I was infuriated by this time. I went to Miss Tew's room and I told Mr. Adams they were not going to allow Dr. Selders to operate. Dr. Dugan walked in and said he would like to talk with Miss Tew. In fact, he would like to offer the services of someone on their staff. At that time she was just coming out of a stupor there. She didn't know what she was doing. He wanted her to sign a release. I refused to let her sign the release. She said, "Must I sign this in order to leave?" He said, "No, it isn't necessary." With that he left the room. We waited outside approximately twenty minutes and she went back into a sleep and the nurse came in with an ice pack about twenty minutes afterward. I turned to ask them then if I could get an ambulance and I think the nurse, she said, "Yes, it will cost a fee of three dollars." I used the telephone. I said, "If you won't call a cab, may I call a cab?" which I did.

Q.—Did Dr. Dugan come into the room a second time? A.—After reading the release?

Q.—Yes. A.—That I cannot recall. There was so much commotion going on, I can't recall; so the cab arrived. I dressed Miss Tew; I didn't get any help. Mr. Adams stayed outside. I think he asked for a wheel chair; at least one was brought. They put her in it and wheeled her out to the main entrance and at the entrance she fainted on the steps.

Q.—How long was she on the steps? A.—Fifteen or twenty minutes, I would say, and she wasn't conscious until we got her to the apartment, and we practically carried her, Mr. Adams and myself, put an ice pack on her, and put her to bed.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Were you rooming with her at this time? A.—Yes.

Q.—How long had you been living with Miss Tew? A.—Let's see, approximately two years, I think.

Q.—Did you work in the same office together? A.—No, we did not.

Q.—Had you known Miss Tew a long time? A.—About six years.

Q.—What office were you employed in? A.—The Federal Works Agency.

Q.—And where was she employed? A.—In the Home Owners' Loan.

Q.—How long had you known Mr. Adams? A.—Four or five years.

Q.—Mr. Adams and you were good friends? A.—Very good.

Q.—Were you both going together at the time? A.—We were.

Q.—Who was it called Mr. Adams that night? A.—You mean the night Miss Tew went to the hospital?

Q.—Yes. A.—I think I did; I am not sure.

Q.—Miss Tew had been sick there for about a week? A.—Four or five days.

Q.—And some one of the doctors had diagnosed the case as appendicitis, when you first called the doctor in? A.—Yes, it was the Group Health medical doctor.

Q.—A week before that time he had pronounced it appendicitis? A.—I wouldn't say so definitely, that he did; I don't recall—this has been two or three years ago; my mind isn't very clear on it.

Q.—But you do know a Group Health doctor was called in to see Miss Tew? A.—Yes.

Q.—And he diagnosed her condition as requiring an operation? A.—Yes.

Q.—And for that reason you called Dr. Selders? A.—He called him, I didn't.

Q.—In any event, Dr. Selders left her in the apartment for approximately a week in that condition? A.—Four days. He saw her every day. The reason nothing was done was that he didn't have a hospital at that time to take her to. As soon as he was able to take her to Garfield he did.

Q.—Did he leave her in the apartment from the 19th of February until the 26th of February? A.—If that is the date she went to the hospital, yes.

Q.—And you told us yourself, regardless of the date, that she was sick for about a week? A.—Yes.

Q.—And you told us you were feeding her soups and broth for about a week? A.—Yes.

Q.—So it was upon your advice or Dr. Selders' that you thought you would move her to the hospital on the night of the 26th? A.—Dr. Selders'. She became quite ill that evening, at about 6 p. m.—6 or 7 p. m.

Q.—Did you make any arrangements at Garfield yourself? A.—I had no connection with the hospital, no.

Q.—Were you present when the arrangements were made with Garfield? A.—That is right. The doctor came in the apartment and said he had made the arrangements, but he would call me back and let me know definitely; I wasn't present when he talked with them.

Q.—So it was Dr. Selders that told you to take her to the hospital? A.—Yes.

Q.—And that was when you called Mr. Adams? A.—I believe he was there. I am not sure; he lived in the same building. I couldn't tell you whether he was in the apartment at the time or not.

Q.—And you assumed when Dr. Selders told you that he had made arrangements with Garfield that he had done so? A.—Yes.

Q.—Did he tell you that arrangements were made to put her in a room, or for him to operate on her? A.—I don't recall, other than I know when we went to the hospital, he told me to present the Group Health card at the desk. It was accepted and a room assigned.

Q.—Did you present any other card besides the Group Health card? A.—It seems to me like I did, but I am not sure.

Q.—But in any event no question was raised and the young lady was assigned to a room? A.—Yes.

Q.—The only question which arose there that evening was whether Dr. Selders had the privilege of the Courtesy Staff to operate there? A.—Yes.

Q.—And, of course, you naturally assumed he had such privilege? A.—Yes.

Q.—You wouldn't have gone there if you didn't so think? A.—No, sir.

Q.—And you wouldn't have advised your friend, if you knew Dr. Selders did not have such privilege to be operated on that hospital by him? A.—I wouldn't advise any one that way, would you?

Mr. Leahy:—You bet I wouldn't!

By Mr. Leahy:

Q.—Now, there came a time when it was found that Dr. Selders wanted to operate and Dr. Dugan raised the question he was not on the staff, the courtesy staff. A.—Yes.

Q.—And Miss Tew took the position that if Dr. Selders couldn't operate she would leave the hospital? A.—She didn't; I took it for her.

Q.—And you told them in no uncertain manner that unless Dr. Selders was permitted to operate on Miss Tew there at that hospital she would leave? A.—Yes.

Q.—And didn't Dr. Dugan advise against that? A.—No.
Q.—Didn't he say that it was not a good thing for her to leave the hospital? A.—Not to my recollection.
Q.—Do you recall having a release presented for Miss Tew to sign? A.—He read it at the foot of her bed; that is the release I am talking about.
Q.—Did you look at it? A.—I didn't; he read it. I don't think this is the correct form he read.
Q.—Won't you read it over carefully and see if it won't refresh your memory? A.—I don't remember this.
Q.—You do remember some kind of a paper presented to Miss Tew? A.—Yes.
Q.—And you advised against her signing it? A.—Yes.
Q.—And, of course, you read it before that? A.—No, I didn't.
Q.—Well, you heard it read. A.—She said, "Must I sign this to leave the hospital?" And I said, "She is not going to sign it."
Q.—Did she read it? A.—Apparently this is what she read, but I can't say; I didn't read it.
Q.—Don't you remember that he read the statement there to Miss Tew? A.—I am sorry; I can't admit it because I can't remember whether or not that is it.
Q.—Didn't he read, "I hereby acknowledge"—
Mr. Kelleher:—It is not in evidence.
By My Leahy:
Q.—I will ask you again if Dr. Dugan at that time didn't say—

Mr. Lewin:—We object to it. It is just repetition. He has already asked that question.

THE COURT:—Yes.

Mr. Leahy:—I would just like to ask the direct question: Didn't Dr. Dugan say that Miss Elizabeth Tew was leaving against the advice of the attending physician? A.—I don't recall Dr. Dugan saying that.

Q.—But at all events you told Miss Tew not to sign this release? A.—Yes.

Q.—Do you know what time that was? A.—Let's see. We went in there; she was in the room 40 minutes before she got any attention whatsoever; I was downstairs 20 minutes; that is an hour, and it was midnight when we got home.

Q.—Do you recall it was about 9:55 p. m. when all this occurred in the room? A.—Well, judging from the space we covered it could be, but I couldn't say.

Q.—How long after 9:55, if that was the time, did you remain in the hospital before you left? A.—Approximately an hour; an hour and fifteen minutes.

Q.—What time did you get home? A.—Close to midnight.

Q.—How long did it take to go by cab from Garfield to California Street? A.—I imagine about ten minutes.

Q.—Then it was approximately 11:30 p. m. when you started to leave Garfield? A.—I won't say definitely.

Q.—Did you call the cab from Garfield? A.—Yes.

Q.—Was the cab there before you started to leave Garfield? A.—The cab was waiting. He had to wait for her to come there.

Q.—She had fainted? A.—Yes.

Q.—Did she fall down when she fainted? A.—I think between Mr. Adams and I she fell; she slumped; we will put it that way.

Q.—Did you both sit on the steps there to hold her? A.—Yes.

Q.—You sat there, you on one side and Mr. Adams on the other? A.—I know she slumped on the steps of the hospital. We waited until she was ready to leave.

Q.—How long do you think you were there? A.—It seemed endless, but I would say ten or fifteen minutes.

Q.—Did Dr. Dugan there that evening twice offer to Miss Tew the services of any one on the staff of Garfield? A.—I don't recall whether he was in twice to render this service or not. I do recall mentioning several surgeons on the staff, and saying how competent they were, and asking for her selection; whether he appeared twice with that in mind I couldn't say.

Q.—But at that time you said "no"; if she couldn't have Dr. Selders she would leave the hospital? A.—That is right.

Mr. Leahy:—I think that is all.

Mr. Lewin:—There is one point that we might clear up as a basis for arguing this other matter. Let me ask if the witness is here.

Mr. Kelleher:—In the meantime, I offer in evidence Exhibit 584, which is the release.

THE COURT:—Any objection?

Mr. Leahy:—No.

THE COURT:—Admitted.

Mr. Kelleher:—I won't read the full release but I would like to show this. On the bottom of the release, which has been read by Mr. Leahy, appears the handwriting, the handwritten memorandum "Patient refused to sign release slip at 9:55 p. m., and in the margin also "Present but not signing"—

TESTIMONY OF ANNA MARY DENNINGER

The witness again identified Dr. Mann's signature on a document.

EXHIBIT U. S. 583

"SIBLEY MEMORIAL HOSPITAL

"1150 North Capitol Street,

"Washington, D. C.

"November 27, 1937.

"Dear Doctor:

"Dr. Raymond Everett Selders has requested the privilege of treating the following in Sibley Memorial Hospital:

"Medicine

"Minor and Major Surgical

"Normal and Abnormal Obstetrics

"Minor Gynecology

"Major Gynecology

"As a member of the Advisory Committee on Surgery will you kindly indicate your approval or disapproval at the bottom of this letter and return it to the office of the President of the Hospital before Tuesday.

"Very sincerely yours

"PAUL S. PUTZKE, M.D., Chairman.

"Applicant's credentials on file in the office of the President.

"Attention of the Committee is called to the fact that above applicant is one of the salaried physicians of the Home Owners Loan Corporation Group Health Association and that information as to his qualifications and correspondence in connection with his application will be found on file in the President's office available to members of the various committees concerned for their information.

"Not approved.

"J. T. MANN."

MARCH 4—MORNING

TESTIMONY OF WILLIAM F. PENNIMAN

FURTHER DIRECT EXAMINATION

By Mr. Kelleher:

Q.—Mr. Penniman, do you know to what hospital Miss Elizabeth Tew was taken? A.—Garfield.

Q.—Did you have a talk with Mr. Eisenman on Nov. 27, 1938? A.—I had a talk with Mr. Eisenman, I think about that date; the latter part of November.

Q.—Who is Dr. Eisenman? A.—Superintendent of Garfield.

Q.—What was the conversation you had with him? A.—It was quite lengthy; we went into a good deal of discussion about Group Health, et cetera.

Mr. Leahy:—May this be considered under the same objection?

The Witness (continuing):—And he told me the most important thing was that no hospital had the right to refuse admission to a patient in an emergency case and that no hospital had the right to refuse that patient the right to bring their own doctor, if it was an emergency, so long as such doctor was duly and properly licensed to practice medicine in the District of Columbia. Following that he told me that I could tell Dr. Brown, Medical Director, that in those cases which were emergency he could send such cases to Garfield and that Dr. Selders, who was regularly licensed to practice medicine in the District of Columbia, could attend them.

Q.—Was that permission ever formally revoked? A.—Yes; it was subsequently.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Do you recall when that permission was revoked? A.—I don't remember exactly the date; I remember there was a letter written to him in which it was stated that until the legality of Group Health was determined he would not have any privileges in the hospital.

Q.—Didn't that letter refer to ordinary courtesy privileges? A.—I don't recall that.

Q.—Was there any other revocation of the emergency privilege than the letter you just referred to, which you can now recall? A.—No, I think it was accepted as a revocation of the privileges that he had had.

Q.—That is the only revocation that you can recall—that letter? A.—Yes.

Q.—And that was dated Jan. 25, 1938? A.—That I couldn't recall; I don't remember the date.

Q.—Now, who accepted that? Did Dr. Selders accept that as a revocation of his privileges to bring into Garfield even an emergency case? A.—I assume he did; he didn't go back.

TESTIMONY OF CLARK PAUL HALSTEAD

DIRECT EXAMINATION

By Mr. Kelleher:

Dr. Clark Halstead said he is employed by Group Health Association.

Q.—When did you join Group Health Association? A.—August 1938.

Q.—Where did you attend for your education? A.—I did my premedical work at George Washington, transferred to Georgetown University; interned at Georgetown University Hospital.

Q.—When did you finish your internship there? A.—June 30, 1938.

Q.—After you joined Group Health Association did you apply to any of the local hospitals for courtesy privileges? A.—I did.

Q.—To what hospitals did you apply? A.—I applied to Georgetown Hospital, Garfield, Providence, Emergency Hospital and George Washington Hospital.

Q.—Did you apply to Sibley Hospital? A.—I did, I believe.

Q.—And when did you apply to these hospitals? A.—August 1939, with the exception of Garfield, which was October 1938.

Q.—And for what privileges did you apply? A.—General medicine and minor surgery.

Q.—What is minor surgery? A.—It is considered any type of minor operation. It is a rather broad term but excludes abdominal surgery or other major types of surgery and, of course, it would include many things; the general practitioner with certain experience is entitled to do certain types of minor surgery.

Q.—Would you say minor surgery embraces that surgery which any general practitioner is considered qualified to do? A.—Yes.

Q.—Prior to Dec. 20, 1938 did you receive word that your application for courtesy privileges had been granted? A.—No action was taken on any of them except, I believe, I was notified from Emergency Hospital that I was not admitted, but I don't recall the date.

Q.—Was it prior to Dec. 20, 1938? A.—I don't think so.

Q.—No action at all prior to that date? A.—No action at all.

CROSS EXAMINATION

By Dr. Leahy:

Q.—Doctor, when did you say you finished your intern training? A.—I believe it was June 30, 1938; the end of the fiscal year for internship ends on the 1st of July.

Q.—And then you immediately applied for the position with Group Health? A.—I did not; I didn't make any application; I made no application. I was approached by them.

Q.—Who was it that approached you? A.—Dr. Selders.

Q.—In August 1938? A.—I believe it was before that; I was intern at Georgetown Hospital. I didn't make any application. As I say, I handled a case in my service as intern in Georgetown, which was a fracture case, and later I was contacted by Dr. Selders, before I completed my internship.

Q.—You really began your employment with G. H. A. on what date? A.—August 1.

Q.—Did you personally make application to the hospitals? A.—Yes, through letter.

Q.—You didn't save any copies of those? A.—Unfortunately, I did not; they should be in the hospital records.

Q.—Did anybody for G. H. A. make any application for you to your knowledge at any of these hospitals? A.—I don't know what you mean.

Q.—Did Mr. Kirkpatrick make any application for you? A.—Certainly not; these applications were signed by myself.

Q.—But you do not know where the copies of those may be? A.—No, I do not.

Mr. Allen:—I wish to read Exhibit 72, a letter dated Oct. 30, 1937, from Dr. Conklin to Dr. Holman Taylor, Secretary, State Medical Association of Texas:

U. S. EXHIBIT 72

"Dear Dr. Taylor:

"I was very happy to hear from you and particularly glad to learn of your successful operations. It is indeed odd to have kidney stones without knowing it, but their removal, I am sure, will mean real satisfaction and the elimination of potential danger.

"The Group Health Association is progressing. October 30, tonight, there is a banquet at the Mayflower Hotel which will be addressed by Richard Cabot of Harvard University. Most all of the hospital superintendents have been invited to attend, some of whom, I believe, will fail to be represented at the gathering. Our president received a letter of invitation, also a ticket. Needless to say this will represent another vacant chair. The staff is made up, according to information at hand, of 5 doctors, in one of whom you may have an interest, due to the fact that the American Medical Directory states that he is a member of the State Medical Society of Texas. Raymond Everett Selders appears to have been born in 1892; graduated at the University of Oklahoma, 1927, etc., etc. He, I believe, will assume the surgical responsibilities.

"The clinic is located on the second floor of a building in the downtown section. The first floor is occupied by an electric light appliance concern. Reports show that they have received some financial assistance from the Federal Home Loan Bank Board. The setup, without the shadow of a doubt, seems to have the smiling approval of the various New Deal officials and the Secretary of Labor, on through.

"I am hoping that the residual soreness as a result of your operation will have completely vanished by the middle of November so that we all may have the advantage of your presence and counsel at the American Medical Association meeting of State Secretaries.

"With cordial regards, I am,

"Fraternally yours,
C. B. Conklin, M.D.,
Secretary."

The next is Exhibit 73-A, dated Nov. 4, 1937, written by Dr. Holman Taylor to Dr. C. B. Conklin, Secretary, Medical Society of the District of Columbia:

U. S. EXHIBIT 73-A

"Dear Dr. Conklin:

"I thank you for your favor of October 30, in reply to my letter of October 27, and having to do with the health insurance situation in the District of Columbia, just received.

"I note with interest that a member of the Harris County (Texas) Medical Society is a member of the staff of the institution which is to be set up in Washington as a beginner in 'State Medicine'; that, in fact, he will take charge of the surgery in the new set-up, Dr. Raymond Everett Selders.

"Please let me know just as soon as the situation has developed in the District of Columbia to such an extent that charges of unethical conduct may be successfully lodged against Dr. Selders. I will see that the facts in the case are laid before his society. I don't believe the members of that organization will stand for anything of this sort, but even so, they are very fair down there, and rather discriminating. They tend to their knitting like few other organizations of the sort with which I am acquainted. If we will give them the facts, they will do the buck; without the facts they will hardly do anything about it.

"I note your statement that the Group Health Association about which we have been writing, is about ready to go. Again I give it as my opinion that this organization has been inspired by some who are in high authority in our national government.

"With personal regards,

"Fraternally yours,
Holman Taylor,
Secretary."

The next exhibit, 538, is a letter dated Nov. 25, 1937, on the letterhead of the Columbia Hospital for Women, Washington, D. C., signed by P. M. Ashburn, M.C., Secretary of the Medical Board, addressed to the Secretary, Houston Medical Society, Houston, Texas:

U. S. EXHIBIT 538

"Sir:

"I am directed by the Medical Board of this hospital to seek your aid in determining the qualifications of Dr. Raymond E. Selders, who practiced in Houston from 1928 to 1935, for doing major and gynecological surgery and operative obstetrics.

"Dr. Selders is an employee of a medical cooperative or insurance organization recently formed by employees of the Home Owners Loan Corporation. This movement has received national attention and has excited much opposition in local medical circles. Dr. Selders, while apparently a generally well trained man, has not submitted evidence of the special training and experience usually demanded by this hospital of men seeking the privilege of doing operative work in gynecology and obstetrics.

"Because of the special circumstances of the particular case and the Board's desire to act in a fair and judicial manner, any assistance you can give it will be greatly appreciated and will be held confidential."

And the next is Exhibit 539, dated Dec. 2, 1937, a reply to Dr. Walter A. Coole, to Dr. Ashburn, Secretary, Medical Board, Columbia Hospital for Women:

U. S. EXHIBIT 539

"Dear Doctor Ashburn:

"Your letter of November 25 regarding the qualifications of Dr. Raymond E. Selders has been referred to me for answer.

"Dr. Selders is a member of this Society in good financial standing. His record here is clear and shows that he is academically and professionally well qualified. I have been given to understand that recently he completed his Masters Degree in Surgery at the University of Pennsylvania which should further qualify him.

"We have been recently informed that he is an employee of the Home Owners Loan Corporation in a contract medical capacity and our Board of Censors are at present investigating the source of this information.

"The Harris County Medical Society strongly condemns any such practice and if the allegations are found to be true, Dr. Selders will be subject to disciplinary action on the part of the Society.

"Further than this, I have no information."

The next is Exhibit 81, dated Jan. 14, 1938, on the letterhead of the Harris County Medical Society, signed by A. T. Talley, Chairman, Board of Censors, Harris County Medical Society, addressed to the Secretary, Medical Association of D. C.:

U. S. EXHIBIT 81

"Dear Doctor:

"The Harris County Medical Society, a component of the State Medical Association of Texas and the American Medical Association, is very anxious to know the medical status of the so-called Group Health Asso-

ciation, located there in Washington. We are especially anxious to know the ethical standing of the men who compose its staff as one of the staff members belongs to our local Society.

"Any information you are in position to give us will be appreciated."

At the bottom, and on the back in pencil is a letter which has been identified as having been written by Dr. Conklin. It is identical with Exhibit 80, which I will read.

Mr. Lewin:—It is a rough copy?

Mr. Allen:—Rough, in handwriting.

Exhibit 80 is dated Jan. 19, 1938 and is a letter from Dr. Conklin, Secretary, to Dr. A. T. Talley, Chairman, Board of Censors, Harris County Medical Society:

U. S. EXHIBIT 80

"In re: H. O. L. C., Group
Health Association

"Dear Doctor Talley:

"In reply to your letter of Jan. 14, 1938 I would state that two members of this Society accepted employment; one at \$2,400 to take all calls, another at \$4,800. The latter resigned from H. O. L. C. after his 'trial' before an appropriate committee of the Society for violation of provisions of the Society's Constitution lasted one night. The other continued; his hearing is now completed. It would seem that he will lose his membership. It must be noted that much praise was given him by the full-time governmental attorneys who represented him.

"I am enclosing certain available mimeographed information. Should you wish any further data please communicate with me."

The next is Exhibit 540, a letter dated Jan. 31, 1938 on the letterhead of the Harris County Medical Society, from A. T. Talley, Chairman, Board of Censors, Harris County Medical Society, addressed to Dr. Raymond E. Selders, 2445 Fifteenth Street N.W., Washington, D.C.:

U. S. EXHIBIT 540

"Dear Doctor:

"At a business meeting of the Harris County Medical Society, Jan. 26, 1938, the Board of Censors reported that it had received a communication from the Secretary of the District of Columbia Society through Dr. Holman Taylor, Secretary of the State Medical Association of Texas at Fort Worth, that a member of the Harris County Medical Society had accepted a position on the Surgical Staff of the so-called Group Health Association made up of Federal employees of the H. O. L. C., located in Washington, D. C. (No name was mentioned.) The Board of Censors stated from their interpretation of the Code of Ethics of the American Medical Association, under which we practice, that it was unethical for one of our members to accept a position of this kind. This interpretation was upheld by a unanimous vote of the Society.

"Hoping you will continue to be with us and that we may hear from you immediately, I am,

"Sincerely,"

The next is 541, dated Feb. 10, 1938 from Dr. Raymond E. Selders to Dr. A. T. Talley, Chairman, Board of Censors, Harris County Medical Society, Houston, Texas. The entire letter has not been admitted in evidence; only one paragraph.

U. S. EXHIBIT 541

"It will be greatly appreciated if I may have from you a frank statement of the grounds on which the action which your letter discloses were taken. It seems to me that I am entitled, under the circumstances, to a full expression of the views of the membership which brought forth what you have described as a unanimous vote of the Society."

Mr. Allen:—The next is Exhibit 545, dated April 15, 1938, from Dr. Walter A. Coole to Dr. Raymond E. Selders, Group Health Association, Washington, D. C. In lieu of reading that exhibit which I mentioned, I wish to read an excerpt from the minutes of the Harris County Medical Society dated Jan. 26, 1938. That is Exhibit 556. I should also like to state that the minutes are only offered and not the attachments thereto, some of which are marked separately.

This is the report of "Boards and Committees":

U. S. EXHIBIT 556

"Dr. A. T. Talley, Chairman of the Board of Censors, reported upon an appeal from a decree of the Adjudication Committee, the approval of two new members for membership, and the matter of one of our members affiliating with a contract organization in Washington, D. C. Motion made, seconded and carried that this report be accepted. Report attached."

Mr. Allen:—Now, I wish to read an excerpt from Exhibit 558, which is the regular business meeting of the Harris County Medical Society, dated March 30, 1938:

U. S. EXHIBIT 558

"Dr. A. T. Talley, reporting for the Board of Censors, preferred formal charges of unethical practice against Dr. Raymond E. Selders. These charges are attached hereto and made a part of these minutes."

Now, we will read Exhibit 545, a letter dated April 15, 1938, from Dr. Coole to Dr. Selders.

U. S. EXHIBIT 545

"Dear Doctor Selders:

"This is to inform you that formal charges, copy of which were sent to you, were read by the Board of Censors at the last regular Business Meeting of the Harris County Medical Society, March 30, 1938.

"These charges shall be submitted to the Society in executive session at the next Regular Business meeting, April 27, 1938, for action by the Society.

"In accordance with the By Laws and Constitution of the Society, you may conduct your own defense, or select some other member to conduct it for you. If you should be absent, or fail to appoint some member, the president shall appoint a member to defend you.

"I am in receipt of your answer to these charges and shall turn them over to the member appointed to defend you should you be absent.

"Sincerely yours,

"Walter A. Coole, M.D.,

"Secretary."

Mr. Allen:—I will read Exhibit 543-A, a letter dated March 9, 1938, signed by three members of the Board of Censors. It reads:

U. S. EXHIBIT 543-A

"Mr. President and Members,
Harris County Medical Society.

"The Board of Censors of your Society does hereby formally prefer charges of unethical practice against one of your members, Dr. Raymond E. Selders.

"This incident charges him with accepting a position on the surgical staff of a group health association, made up of Federal employees of the Home Owners Loan Corporation, located in Washington, D. C. This type of practice is unethical as judged by Article VI, Section 3 of the American Medical Association's Code of Ethics, in that:

"(1) The compensation is inadequate to assure good medical service.

"(2) It interferes with reasonable competition among the doctors in the city of Washington, D. C.

"(3) It interferes with the free choice of a physician by the patient.

"(4) It is contrary to sound public policy.

"Respectfully submitted:

"A. T. Talley, M.D., Chairman.

"John H. Foster, M.D.

"C. M. Warner, M.D."

The next I will read is Exhibit 560, Minutes of the Harris County Medical Society, Regular Business Meeting, April 27, 1938:

U. S. EXHIBIT 560

"The President announced an executive session. Assembly Hall was cleared at 8:30 p. m.

"Dr. J. C. Alexander was appointed by the President to act as defender to formal charges filed against Dr. Raymond E. Selders.

"The formal charges as set forth in the minutes of the Business Meeting of March 30, were read by the Secretary.

"The President asked the Defense, 'What is your answer—Guilty or Not Guilty?'

"*Dr. J. C. Alexander:*—Not Guilty. Is Dr. Selders a member in good standing of this Society?

"*Secretary:*—Dr. Selders is on the rolls of the Society as a suspended member, his dues having expired April 1st.

"*Dr. J. C. Alexander:*—I will make the motion that these charges be deferred inasmuch as Dr. Selders is not a member in good standing.

"*Dr. William E. Ramsay:*—We have no other option, other than to proceed with this trial.

"*Dr. A. T. Talley:*—There is no question about the status of Dr. Selders. As a suspended member on the rolls of the Society, he is under the discipline of the Society; however, I wish to offer this resolution:

"Dr. Raymond E. Selders, a member of our Society, was indicted by the Board of Censors for unethical practice upon a complaint from the District of Columbia Society, through Dr. Holman Taylor, Secretary of the State Medical Association of Texas, that he had accepted a position on the surgical staff to do contract practice for a Group Health Association, made up of Federal employees of the H. O. L. C. in Washington, D. C.

"Since reading the indictment to the Society at the March Business Meeting, the Board of Censors has had an opportunity to study the By-Laws of the American Medical Association in reference to this matter and we find in Chapter IX, Section 1, pertaining to duties of standing committees and councils, words which according to our interpretation mean that in any controversy between a constituent association and a member or members or another constituent association, the Judicial Council has original jurisdiction in adjudicating the controversy. Therefore, according to this By-Law, the controversy between the District of Columbia and Dr. Selders, who is a member of the State Medical Association of Texas, both constituent associations, should be referred by this Society directly to the Judicial Council of the American Medical Association for adjudication.

"The Board of Censors moves that this be done."

"*Dr. J. C. Alexander:*—Will the Chairman of the Board of Censors quote this authority?"

I will not read it; it is quoted.

"The President called for a vote upon the motion of the Board of Censors. The motion carried by a vote of 41 in favor of the motion and 4 against it."

And without reading the minutes, if it is agreeable to counsel, may it be understood that it was referred to the American Medical Association and was returned by the American Medical Association to the Harris County Medical Society?

Mr. Leahy:—Yes; sure.

Mr. Allen:—Next I will read the Minutes of the Special Business Meeting, Nov. 23, 1938, of the Harris County Medical Society, Exhibit 563:

U. S. EXHIBIT 563

"Meeting called to order by Dr. John T. Moore, President.

"Dr. A. T. Talley presented the following resolution of the Board of Censors:

"The Board of Censors, Drs. A. T. Talley, John H. Foster, and Clyde M. Warner, met with your President, Dr. John T. Moore, the Secretary, Dr. Walter A. Coole, the District Counselor, Dr. Judson L. Taylor, and the legal representative of Dr. Raymond E. Selders, Dr. J. C. Alexander, Nov. 21, 1938."

"The meeting was called to order and a very free and frank discussion was held regarding the Dr. Raymond E. Selders matter, which has been pending in our Society for some time.

"The conclusion reached by the Board of Censors was agreed to by all those present, that due to the various legal questions involved in the case, the Board of Censors recommends to the Society:

"That the charges of unethical practice against Raymond E. Selders, now lying on the table, be brought before the Society and dismissed without prejudice."

"Motion was made by Dr. John Zell Gaston, seconded by Dr. William E. Priester, and duly carried, that the resolution of the Board of Censors be adopted.

"Dr. Talley presented the following resolution of the Board of Censors: "That the check of \$24 tendered the Society by Dr. Raymond E. Selders to pay his 1938 dues be accepted."

"Motion was made by Dr. B. T. Van Zant, seconded by Dr. Dawes, and carried, that the resolution of the Board of Censors be adopted.

"Letter of transfer from the Harris County Medical Society was read by the Secretary from Dr. Raymond E. Selders.

"Motion by Dr. A. T. Talley, seconded by Dr. Priester, that the letter of transfer be voted upon at the next regular business meeting, Nov. 30, 1938. Motion carried."

The next is Exhibit 564, dated Nov. 30, 1938, "Unfinished Business," regular business meeting, Harris County Medical Society:

U. S. EXHIBIT 564

"Voting on the application of Dr. Raymond E. Selders for transfer, Vote by ballot 52 yes, 42 no that Dr. Selders be granted a transfer."

Mr. Lewin:—I now offer in evidence Exhibit marked 585, which purports to be a letter from Dr. Thomas E. Neill, President, District Medical Society, to the Superintendent of the Homeopathic Hospital, dated April 23, 1938. I call attention of the Court that Dr. Neill's signature has already been proved by specimens which are in evidence, and I will ask the Court to exercise its discretion in comparing the signatures. The letter was obtained by us and produced from the Homeopathic Hospital, from its files.

Mr. Leahy:—No special objection.

THE COURT:—It will be admitted.

Mr. Lewin:—May I characterize it without reading it? It is simply an invitation by President Neill to the hospitals to attend a meeting in April of 1938. There has been other testimony with regard to it.

Mr. Richardson:—State the purpose of it.

Mr. Lewin:—I better read it then.

U. S. EXHIBIT 585

"Dear Mrs. Treasure:

"The Executive Committee of the Medical Society of the District of Columbia believes that a joint meeting of the Presidents of the Boards of Directors of the several hospitals, together with their Chairman of the Medical Staffs, and Superintendents, and a few members of the Medical Society, for a round table discussion of our common problems, may result in a fuller and better understanding, especially in preserving the best professional care for our community.

"You are, therefore, cordially invited to be present on Tuesday, April 26, 1938, at 8 p. m., in the Library of the Medical Society Building, 1718 M Street, N. W. This meeting is entirely for our mutual understanding and not for publication.

"Very sincerely yours,

"Thomas E. Neill, M.D.,
"President."

TESTIMONY OF GRACE BRENNEN

DIRECT EXAMINATION

By Mr. Lewin:

Grace Brennen said she is secretary of Dr. Jerome Crowley.

Q.—I show you an exhibit marked 307, which purports to be some questions and answers—the questions in typewriting and the answers in longhand, and I call your attention to the answers to question 8, and question 11, and ask you whose writing that is in. *A.*—Dr. Crowley's.

Q.—Is the rest of the handwriting Dr. Crowley's? *A.*—No, unless he used a very bad pen.

TESTIMONY OF JOHN PAUL FOLEY

DIRECT EXAMINATION

John Paul Foley said he is Assistant Secretary of the Commission on Licensure.

Q.—Just what is that commission? *A.*—That commission is a body of men created by an Act of Congress to regulate the healing art practice in the District of Columbia.

He produced the original application of Thomas E. Mattingly for licensure.

Mr. Leahy:—Objection is raised, if your Honor pleases, to Exhibit 587.

By Mr. Leahy:

Q.—Is it Mr. Foley or Dr. Foley? *A.*—Mr. Foley.

Q.—Mr. Foley, when did you go to work for the Board of Licensure? *A.*—1935.

Q.—Then all you know about this particular document, which has been identified as 586, is that in accordance with the mandate of this subpoena you withdrew this from the records of your office and produced it? *A.*—Yes.

Mr. Leahy:—Objection to 586.

Mr. Lewin:—Exhibit 586 is one of the formal original records of this public body, the Commission of Licensure.

By Mr. Lewin:

Q.—That is true, is it not, Mr. Foley? *A.*—Yes.

Mr. Lewin:—No further questions. We submit it to your Honor. (Thereupon, Court and counsel conferred at the bench.)

TESTIMONY OF HARRIET AUSTIN

DIRECT EXAMINATION

By Mr. Lewin:

Harriet A. Austin lives in Chevy Chase, Maryland. In September 1938 she lived in Foxhall Village.

Q.—Were you entitled to privileges then in Group Health Association? *A.*—Well, not until after this accident.

Q.—Did you say you had an accident? When did you have that? *A.*—I can't remember. That accident spoiled my memory.

Q.—It spoiled your memory? Would you say it was in September of 1938? *A.*—I guess about that.

Q.—Can you remember where it happened? *A.*—Well, it was down on Pennsylvania Avenue. The street car was waiting there and it took me a half hour to get home, and I was in a hurry—

Mr. Leahy:—If the accident occurred before she became entitled to G. H. A. service, it is immaterial.

By Mr. Lewin:

Q.—At that time you had a daughter, didn't you, Mrs. Austin? *A.*—Yes.

Q.—What was her name? *A.*—Edwina Avery.

Q.—Was she a member of Group Health Association? *A.*—Yes.

Q.—And were you dependent upon her? *A.*—Yes.

Q.—At the time of the accident, that is true, isn't it? *A.*—Yes.

Q.—So that at the time of the accident, although you were not a member yourself of Group Health Association, you were a dependent of a member: that is right? *A.*—Yes.

Q.—Now, when you were interrupted you were telling us about an accident. Will you continue to do so? *A.*—I started over toward the street car, and the car came down the hill, and turned right around quick—

THE COURT:—We don't want to go into the details. She was injured?

Mr. Lewin:—His Honor doesn't want to hear anything more about that.

By Mr. Lewin:

Q.—What happened after you were struck by the car? *A.*—I didn't know for a while; they got me to the hospital.

Q.—What hospital did they take you to? *A.*—Emergency Hospital.

Q.—Here in Washington? *A.*—Yes.

Q.—What happened when you got to the hospital? *A.*—They first put me in a bed and took my clothes off, and examined me.

Q.—Who examined you, a young doctor there? *A.*—I don't know. I didn't know very much about it.

Q.—Did they give you any treatment? *A.*—No.

Q.—They did not? *A.*—Did not.

Q.—And did you ask for anybody? *A.*—I told them I would like to send word to my daughter.

Q.—That is Mrs. Avery? *A.*—Yes.

Q.—And did your daughter come there? *A.*—She and her husband came right down.

Q.—What happened after that? Were you taken from the hospital then? *A.*—Yes.

Q.—Shortly after they came? A.—Yes, not very long after.
Q.—And were you taken away in an ambulance? A.—In an ambulance, yes, Hines Company ambulance.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Do you remember the year? A.—I don't know whether I could do that; my memory was destroyed at that time.
Q.—Do you remember the name of anybody at the hospital? A.—At the Emergency?
Q.—Yes. A.—No, I had never been there before.
Q.—Do you know whether they took you in a room? A.—Yes, they put me in almost a corridor; curtains around it.
Q.—Did they examine you? A.—There was one person, they told me afterwards; I didn't know very much about it, anyway.
Q.—You didn't know much what happened, did you? A.—No.

TESTIMONY OF EDWINA AVERY

DIRECT EXAMINATION

By Mr. Kelleher:

Edwina Austin Avery said she is Mrs. Austin's daughter. She was an employee of the Department of Agriculture in 1938.
Q.—Were you also a member of Group Health? A.—Yes.
Q.—Under your membership, was your mother entitled to benefit from that organization? A.—That is right.
Q.—And was this true in September 1938? A.—That is right.
Q.—On Sept. 7, 1938?
Mr. Leahy:—Don't lead.
Mr. Kelleher:—All right. I was just trying to do what you suggested; to save time.
Mr. Leahy:—You were not worrying about doing what I had suggested.

By Mr. Lewin:

Q.—What happened on Sept. 7, 1938? A.—I was rather late coming home from the office that evening and I was home a very short time when the telephone rang. I imagine the time would be after 6:30, the telephone rang, and I was informed by a woman's voice—

Mr. Leahy:—Object to anything she was told.

THE COURT:—Yes.

By Mr. Kelleher:

Q.—What did you do as a result of that telephone call? A.—I went to the Emergency Hospital, because I had been informed—

Mr. Leahy:—Same objection.

Mr. Kelleher:—Don't repeat the conversation.

The Witness:—Went to the Emergency Hospital and found my mother in the intake department of the Emergency. I found that she had—

Mr. Leahy:—I object; it must be based on hearsay.

Mr. Kelleher:—All right.

By Mr. Kelleher:

Q.—Did you talk with the intern at the hospital? A.—I talked with the intern at the Emergency as soon as I found the one who had examined mother and found that he had examined her, and that he had stated that there were no broken bones he could find; that there was no concussion, but that she was suffering badly from bruises and cuts. I immediately asked to have my own doctor brought in. This man said that there was another intern who wished to see her, a Dr. Harris, and I said, "How soon?" Naturally I was very much upset. The doctor said it would probably be an hour, that the doctor was already in the hospital, but that he had to eat his dinner. I wasn't anxious to wait an hour to have my mother further examined, and continued to insist on having my own doctor come in. He said I could phone him. I immediately went to the phone I was directed to and called Dr. Selders. Dr. Selders informed me—

Mr. Leahy:—I object to any conversation.

THE COURT:—Yes. Don't tell the conversation.

By Mr. Kelleher:

Q.—Did you ask Dr. Selders to come over?

Mr. Leahy:—We object; the Court has just ruled on that.

THE COURT:—Don't state what Dr. Selders said. She may answer as to whether she requested Dr. Selders to come.

The Witness:—I asked Dr. Selders to come immediately, and found out that he could not, and that I should go to the hospital authorities to make arrangements for his coming. I immediately went to the superintendent's office, was told that it was after hours, and that the general superintendent was not there. I was referred to the night superintendent, a doctor named McKeever—I believe his name was; I went to see Dr. McKeever and asked to have my doctor brought in.

Q.—Did you explain any circumstances? A.—I explained that the case was an emergency case, and that my mother was at that time in the intake department, having no attention whatsoever, except that one intern had looked her over. Can I say what the doctor told me?

Q.—Yes, proceed. What did Dr. McKeever say? A.—Dr. McKeever wanted to know who my doctor was. I said, "Dr. Selders." He said he didn't know him. I explained that he was Dr. Raymond E. Selders, the Medical Director of Group Health, of which I was a member. He looked in a file over in the corner and came back and said that Dr. Selders' name was not in their list. I said, "Just what does that mean?" He said that Dr. Selders would not be admitted to their hospital. I said, "Well, my mother—" Just then my husband came in and heard that remark and said something. I spoke up and said, "I have explained this to Dr. McKeever. This is an emergency and my mother is an emergency case, and it is my understanding in emergencies we can have our own doctor in."

Dr. McKeever said he was sorry, it didn't make any difference whether it was emergency or not. Dr. Selders couldn't come in. I said, "But I thought the whole point in this controversy was that we were to have the free choice of physicians"; that he was my surgeon and I wanted Dr. Selders. He said, "I am sorry." My husband said, "Perhaps he is working under orders." I said, "Is that so?" He said, "Yes." I said, "Perhaps it would be good for me to go to the superintendent." He said, "No, it wouldn't do any good to see him; the orders would be the same." I said, "I want my surgeon to look over my mother." The doctor said he could do so in the intake department but as far as giving any orders or doing any work, treating her, it would not be permitted. I said the best thing I could do would be to find out from Dr. Selders what he would recommend.

Q.—Before you leave that conversation, did Dr. McKeever suggest any other doctor? A.—Yes, he did. He went over to the corner when I said this about the free choice of physicians. He said, "We have a whole list of doctors here. You can have your free choice." I said, "I suppose I will go over and close my eyes and go down the list." He said, "You can move your mother to any hospital in the city if you wish." I said, "Could we be assured we would receive any different treatment in any other hospital?" He said, "No." I called Dr. Selders again at that time.

Q.—Without telling what Dr. Selders said to you, will you tell the jury what you told Dr. Selders?

Mr. Leahy:—I object to that.

THE COURT:—I don't think that is competent; sustained.

By Mr. Kelleher:

Q.—What did you do after you talked with Dr. Selders? A.—I went back to see my mother and found her in a very high state of—in fact, near nervous collapse, because of the treatment she had been subjected to. It had now been something like two and a half or three hours, and she was without treatment; and she was insisting on being taken home. She wanted to get home, because of the action—

Mr. Leahy:—I object to the qualification by the witness.

THE COURT:—Yes; let us get along.

By Mr. Kelleher:

Q.—All right, what did you do? A.—I went back and talked again to the intern and found that this Dr. Harris had examined her in the meantime, while I was talking to the superintendent, and I talked to both these doctors and they both assured me there were no broken bones and, so far as they could see, no concussion, although they could make no definite statement on that, but because of conditions there I made the decision to move my mother that night.

Q.—Did you do so? A.—I did, as soon as I could get an ambulance to take her home when she was examined by her own surgeon.

Q.—About what time did you get her home? A.—Between 9 and 10 o'clock.

Mr. Kelleher:—No further questions.

CROSS EXAMINATION

By Mr. Leahy:

Q.—Are you still employed by the Agriculture Department? A.—Yes.

Q.—And when did you join G. H. A.? A.—February of 1938.

Q.—Did you ever hold office in G. H. A.? A.—Yes.

Q.—What office do you hold? A.—I am at present one of the Board of Directors.

Q.—How long have you been on the Board of Directors of G. H. A.? A.—One year, a little over. Our election is in January.

Q.—So you are presently one of the Board of Directors, or is it Board of Trustees? A.—Board of Trustees. Board of Trustees or Directors.

Q.—When was it that this accident occurred, if you recall? A.—In September, the early part of September, the 7th. Late in the evening, during the heavy traffic hours.

Q.—And you would say it was about what time? A.—It must have been—in fact, I could give you the exact time, because I happened to look. The call came at 5:19, but they didn't call me until 6:35.

Q.—Were you home? A.—I wasn't at home, and there was no call until 6:35, because my maid was home and there was no call.

Q.—All you know about that is what you heard from your maid? A.—Yes, but I do know this: I asked the girl when she telephoned me what time my mother was brought in. She said 5:30. I said, "Why didn't you call me?" and she said they had been having difficulty, or something.

Q.—Were you living at Foxhall Village at the time? A.—Yes.

Q.—And you immediately went down to the hospital? A.—Yes.

Q.—And you found that an intern had examined your mother? A.—Yes.

Q.—And he said he wanted another doctor to look her over? A.—He didn't say he wanted another doctor. He said another doctor should do it.

Q.—What was his name? A.—Harris.

Q.—And what was the other intern's name? A.—I do not know.

Q.—Did you ask him? A.—No, but I remember "Dr. Harris," because he introduced him to me.

Q.—How long were you talking to Dr. McKeever? A.—Well, you see, I got to the hospital about ten minutes to seven, I presume. I was talking to the intern and nurses and my mother—It might have been 20 minutes, 25; perhaps not that long; I couldn't be sure.

Q.—And in the meantime, while you were talking to Dr. McKeever, Dr. Harris had also examined her? A.—Yes.

Q.—And they both stated, as far as they could determine without x-ray, there were no broken bones or anything of that kind? A.—Yes.

Q.—Do you recall what position Dr. McKeever had in that hospital at that time? A.—I was told he was the assistant night superintendent. The night superintendent. He is the assistant superintendent and the night superintendent.

Q.—Did you know Dr. Selders pretty well at that time? A.—Only as you would know your physician. I am rather a healthy specimen and I had not much occasion to meet him.

Q.—Did you know him? A.—Yes.

Q.—How many times do you think you had talked with him before?

Mr. Lewin:—I think that is immaterial.

THE COURT:—I think so.

Mr. Leahy:—I just want to know.

Mr. Lewin:—I know you do, but it is immaterial, and I object to it on that ground.

THE COURT:—It seems immaterial, unless you have some object.

Mr. Leahy:—It is only preliminary.

THE COURT:—Sustained.

Mr. Leahy:—I don't want to transgress your Honor's ruling, but may I approach the bench?

THE COURT:—Yes.

(Thereupon counsel for all parties approached the bench.)

By Mr. Leahy:

Q.—You had talked with Dr. Selders, had you not? A.—Yes.

Q.—How many times had you discussed the matters with him?

A.—Discussed matters?

Q.—Yes. A.—Anything at all?

Q.—Yes. A.—On numerous occasions, I imagine.

Q.—Most of these matters were with reference to the controversy which had existed between the hospitals and G. H. A.; isn't that true? A.—No.

Q.—Had you ever discussed that? A.—I never had until we discussed it on the telephone that night.

Q.—With whom had you discussed the matter of emergency calls? A.—Dr. Selders told me that night; he said the superintendent would give me the right to have my own doctor there because it was an emergency.

Q.—Was this before you talked with Dr. McKeever? A.—Yes, he had instructed me to see the superintendent.

Q.—Did you know at the time that Dr. Selders was not on the courtesy staff of the Emergency Hospital? A.—I don't think I knew it; I don't know why I should have.

Q.—Did you know what he meant when he said that this was an emergency case, and when you said to Dr. McKeever, "It is my understanding that I have the right to my own doctor if it is an emergency case"? A.—I would think the case was an emergency, and my understanding of the word, so far as the dictionary definition of it was concerned, from that it was certainly an emergency case. Is that what you are trying to bring out?

Q.—That is what your understanding was? A.—Yes.

Q.—Did they offer to have any doctor in the hospital look your mother over? A.—No, not in the hospital.

Q.—Did you look in the list to see what doctors were there? A.—No.

Q.—Did there seem to be quite a number? A.—It was a filing cabinet; one of those that turns around, but about this time I was rather upset myself.

Q.—Did you then talk to Dr. Harris when you got back to the intake department? A.—Yes.

Q.—And after receiving the word that there were no bruises, broken bones— A.—(Interposing) There were serious bruises and cuts.

Q.—But no broken bones? A.—That is correct.

Q.—Then you called for an ambulance and took your mother home? A.—I asked Dr. Harris about an ambulance. He said they had no such service; then I got in touch with a private ambulance.

Q.—Was that Mr. Hines? A.—Yes.

Q.—And then did Dr. Halstead see your mother at home that evening? A.—Dr. Halstead came immediately.

MARCH 4—AFTERNOON

TESTIMONY OF LOUIS F. THOMPSON

DIRECT EXAMINATION

By Mr. Kelleher:

Louis F. Thompson said he was employed with the Home Owners Loan Corporation in March 1938, temporarily assigned to assist in setting up the records of the Group Health Association.

Q.—I show you Exhibit 463 to 468, inclusive, for identification, and ask you whether you signed Mr. R. T. Berry's signature on those letters? A.—With my initials under the signature; yes, sir.

TESTIMONY OF KENNETH D. ARMSTRONG

DIRECT EXAMINATION

By Mr. Lewin:

Kenneth D. Armstrong said he was in May of 1929 a notary public of the District of Columbia. He identified the signature of Dr. Thomas E. Mattingly.

TESTIMONY OF SAMUEL H. ROGERS

DIRECT EXAMINATION

By Mr. Lewin:

Samuel H. Rogers said he was president of the Board of Directors of Casualty Hospital in 1938. He identified signatures, minutes, roster of the staff, committees, etc.

TESTIMONY OF DR. FRANCIS X. RICHARDSON

DIRECT EXAMINATION

By Mr. Lewin:

Q.—When you were on the stand before, I believe you testified that you resigned from your position with Group Health Association on July 15, 1938? A.—Yes, sir.

Q.—And I believe we identified your written resignation? A.—Yes, sir.

Q.—Dated July 15, 1938? A.—Yes, sir.

Q.—Now, without stating what anybody else said to you, tell the jury what was the immediate reason that you had for resigning when you did. A.—The reason that I resigned was because of the conversation which I had with these men.

Q.—Without telling us about that conversation, what was the reason that resulted from it that caused you to put in your resignation? A.—I hardly see how I can answer that question without discussing what was said.

Q.—But you are not permitted to do so. We have got to get your answer from your own mental processes.

Mr. Leahy:—Ask him the direct question.

By Mr. Lewin:

Q.—Did you resign from Group Health Association on that date because you were afraid you might lose your hospital privileges? A.—Yes, sir.

Q.—That was your reason? A.—Yes.

CROSS EXAMINATION

By Mr. Leahy:

Q.—You told us you went to work for G. H. A. some time in the year 1937, did you not? A.—Yes, sir.

Q.—You had privileges in what hospitals? A.—Sibley, Providence and Garfield.

Q.—And you had them, did you not, on July 15, 1938? A.—Yes, sir.

Mr. Lewin:—May it please the Court, before we approach the bench on the offer which has already been made, I would like to make some additional offers and then we can approach the bench in one fell swoop.

THE COURT:—Very well.

Mr. Lewin now offered additional exhibits.

(The jury withdrew from the court room. Counsel approached the bench and conferred with the Court.)

Mr. Kelleher then offered sections from the Proceedings of the House of Delegates of the American Medical Association for 1938, report of the Secretary, report of the Reference Committee on Reports of Board of Trustees and Secretary, page 58, and the official action with respect to this report, appearing on page 60. the Report of the Board of Trustees, marked in red pencil on pages 7, 8, 29, 30 and 31, together with the portion of the Report of the Reference Committee on the Reports of the Board of Trustees and Secretary appearing on pages 58, 59 and 60, and the action of the House of Delegates on the report of the Reference Committee, appearing on page 60. He offered also the report of the proceedings of the House of Delegates in 1931. The portion of the Report of the Board of Trustees, appearing on page 19, together with the portion of the Report of the Reference Committee on Reports of the Board of Trustees and Secretaries, appearing on page 35, and the action of the House of Delegates approving the Report of the Reference Committee, appearing on page 35; also the portion of the Report of the Judicial Council, appearing on page 24, together with the portion of the Report of the Reference Committee on Rules and Order of Business, appearing on page 40, and the action of the House of Delegates on the latter report, appearing on page 40. He offered also the report of the proceedings of the House of Delegates for 1932, the portion of the Report of the Board of Trustees appearing on pages 15 and 16, together with the portion of the Report of the Reference Committee on Reports of Board of Trustees and Secretary, appearing on page 46, and the action on the latter report by the House of Delegates, appearing on page 48; also the report of the Reference Committee on Medical Education appearing on page 40.

Mr. Kelleher also offered the portion of the report of the Reference Committee on Medical Education, appearing on page 40, and the action of the House of Delegates on the report of that committee, appearing on page 41. Then he offered the report of the proceedings of the House of Delegates for 1933—from that report, in addition to what has already been offered and received, the resolution of Mundt, appearing at page 50, together with the Report of the Reference Committee on the Mundt Resolution, appearing at page 56, and the action of the House of Delegates on the report of the Reference Committee appearing on page 57.

Next he offered the report of the proceedings of the House of Delegates for 1934, the Report of the Special Committee appearing on page 55, together with the action of the House of Delegates dealing with the report, appearing on page 55. He also offered the proceedings of the House of Delegates for 1935, 1936 and 1937; the portion of the report of the Judicial Council appearing on page 30; so much of the Report of the Reference Committee on Reports of Officers, to which the Report of the Judicial Council was referred, pages 40 and 41 of the Proceedings; the action of the House of Delegates upon that portion of the Report of the Reference Committee, appearing on page 41; the portion of the Report of the Council on Medical Education and Hospitals, appearing on page 31; the portion of the Report of the Reference Committee on Medical Education appearing on page 37; the action of the House of Delegates upon the report of said Reference Committee, appearing on page 38; that portion of the Report of the Reference Committee on Medical

Economics appearing on page 46; the action of the House of Delegates upon the aforesaid portion of the report of said Reference Committee, appearing on page 47; that portion of the Special Report of the Bureau of Medical Economics appearing on pages 56, 59 and 60; that portion of the Report of the Reference Committee on Medical Economics appearing on page 63, and the action of the House of Delegates on the said portion of the report of said Committee, appearing on page 64.

The Government also offered in evidence the proceedings of the House of Delegates for 1936: These portions of the Report of the Board of Trustees appearing on pages 7, 20, and 23, that portion of the Report of Reference Committee on Legislation and Public Relations, to which the portion of the Report of the Board of Trustees appearing on page 23 was referred, appearing on page 51; those portions of the Report of the Judicial Council appearing on pages 36 and 37; those portions of the Report of Reference Committee on Reports of Officers, to which Reference Committee the Report of the Judicial Council was referred, appearing on page 47, and the action of the House of Delegates on said portions of the Report of said Reference Committee, appearing on page 48; that portion of the Report of the Council on Medical Education and Hospitals, appearing on page 38; that portion of the Report of Reference Committee on Medical Education appearing on page 45 and the action of the House of Delegates on said report, appearing on pages 45 and 46; that portion of the Proceedings entitled "Membership in County and State Associations for Members of Staffs of Hospitals," appearing on page 60.

The Government also offered the proceedings of the House of Delegates for 1937: The portion of the Report of the Board of Trustees appearing on pages 22, 23, 24, and 25, that portion of the Report of Reference Committee on Legislation and Public Relations, appearing on page 68; the action of the House of Delegates on that portion of the report of said Reference Committee appearing on page 68; that portion of the report of the Judicial Council appearing on pages 39 and 40; the Report of Reference Committee on Amendments to the Constitution and By-Laws, appearing on page 74; that portion of the Report of the Council on Medical Education and Hospitals, appearing on page 41; that portion of the Proceedings entitled "Proposed Amendments to the Principles of Medical Ethics," appearing on page 53; that portion of the Report of Reference Committee on Amendments to Constitution and By-Laws, appearing on page 64 and the action of the House of Delegates on said portion of the Report of said Reference Committee, appearing on page 65.

Mr. Lewin:—The Government would like to reserve the right, at the appropriate time, to ask your Honor to extend to all of the defendants as to whom a prima facie case may have been made out certain of the evidence which was offered against individual defendants.

THE COURT:—That will come later.

Mr. Lewin:—I should like now to read to the jury U. S. Exhibit 587.

Mr. Leahy:—May it be the instruction, your Honor, that this is admissible only against the writer of the letter?

THE COURT:—Yes; I think so.

U. S. EXHIBIT 587

Mr. Lewin:—This is a letter from the defendant Thomas E. Mattingly addressed to William R. Beall, Foreman, Special Grand Jury, dated Nov. 13, 1938:

"Gentlemen of the Grand Jury:

"I hope that you will not think that this second communication implies any fear on my part that my first letter did not or will not get just consideration and appropriate action. Rather it is written to provide you gentlemen with specific data, whereby I hope to persuade you (even should the Public Prosecutor object) that you, as a fact finding body, could not in justice, honesty or fair play ignore my plea as a reputable physician, a native son and a life long resident of the District of Columbia, for a hearing. I purposely add the comment, 'even should the Public Prosecutor object,' because I am fearfully of the belief that he will use every device at his command to keep you from learning the whole truth, undistorted by political prejudice and intellectual dishonesty. It is my personal opinion that if the Public Prosecutor had knowledge or even a well founded suspicion, that the testimony of a witness subpoenaed before you, might weaken or break his case, he would not be above the legalistic trickery of attempting to persuade you, 'that the status of the witness had already been investigated and such testimony as they might be able to give, is both irrelevant and inconsequential.'

"Because I have an abiding faith in your civic honesty, your democratic concept of justice and your staunch, incorruptible courage, I promise if allowed to appear before you and under your sovereign protection, to acquaint you with what is in the hearts and minds of this community of physicians which has motivated us to do as we have done. I am sure you will agree, that before you can with honesty and conscience indict us, you must make every effort to

ascertain the true reasons behind this concerted but spontaneous action of a preponderant majority of the physicians of Washington. Only when and if you have weighed and considered those motives, can you return a true and uncorruptible verdict. Because I trust you, have faith in you, I promise if given an opportunity to appear before you to truthful answers [sic] without any evasion or reservation whatsoever.

"That you might know beyond any reasonable doubt and despite any objections on the part of the Public Prosecutor that my testimony is both relevant and consequential, I frankly admit the following acts of professional leadership, successfully accomplished.

"1. I personally raised the question and forced the issue of compelling wavering or undecided hospitals to deny courtesy privileges to staff members of G. H. A. I likewise successfully argued the point in an Executive Session of the Medical Society that we had ample precedent to discipline any member of our society found guilty of secretly aiding G. H. A. in obtaining its objectives by subterfuge. The threat of this action alone enjoined the clandestine cooperation of several members suspected of such cooperation, though it must be noted that these members were never openly named because such suspicion we had, was hearsay evidence only, and as such was not admissible.

"2. I successfully used my position as a member of the Medical Council to prevent Dr. Raymond Selders from receiving courtesy privileges at Sibley Hospital.

"3. I was the author, sponsor and lone defender of the defeated substitute motion which would have punished Dr. Scandifio with suspension, instead of expulsion from the Medical Society.

"Obediently,
"Thomas E. Mattingly, M.D."

May it please the court, with the reservation of the right to introduce at the next session such items of evidence as we may have overlooked, the Government at this time rests.

THE GOVERNMENT RESTS

THE COURT:—Have there not been some letters and papers that have gone in recently that ought to be read?

Mr. Lewin:—No; I do not think so. Lots of them were cumulative things that we did not expect to read.

THE COURT:—I thought if you did want to read them I would like to take the time to do it now.

Mr. Lewin:—No, your Honor. We do not plan to read them unless counsel for the defendants want them read.

THE COURT:—I suppose counsel for the defendants are ready to proceed?

Mr. Leahy:—I would like to proceed to get a little rest, your Honor.

THE COURT:—Members of the jury, counsel have conferred with me, anticipating that the Government would probably close its case today, and have indicated a desire, on both sides, to do some work outside of the court in order to prepare for the next turn in the case. After discussing it with them it perhaps is not only fair to them but probably, in the end, it will also save some time, if I do give them a day for that purpose. So I am excusing you and adjourning the case until Thursday morning.

MARCH 6—MORNING

TESTIMONY OF FRED O. COE

DIRECT EXAMINATION

By Mr. Kelleher:

Q.—You have been on the stand before, have you not? A.—Yes, sir.

Q.—You are from Georgetown University Hospital? A.—Yes.

Q.—And secretary of the Executive Staff and were during 1938? A.—Yes.

The witness identified his letter to Dr. Raymond E. Selders, dated March 4, 1938.

(Here followed extended discussion at the bench over admission of a carbon of a letter from Holman Taylor to the Board of Censors of Harris Co. Medical Society taken from Dr. Leland's file. It was not admitted.)

(A letter from Dr. Leland to Dr. Saville was admitted.)

TESTIMONY OF HELEN E. SWANSON

DIRECT EXAMINATION

By Mr. Kelleher:

Helen E. Swanson said she is employed by George Washington University Hospital as Secretary to the Medical Director, Dr. Bloedorn.

(She identified roster of the hospital, committees, staffs, etc., also a record of membership of the staff in the District of Columbia Medical Society. All were received in evidence.)

Also received were Conklin letters of July 29, 1937, and December 2, 1937, together with enclosures.

Attorneys for the prosecution notified the Court of certain corrections in the record.

MOTION FOR A DIRECTED VERDICT ON BEHALF OF THE DEFENDANTS

OPENING ARGUMENT ON BEHALF OF THE DEFENDANTS WILLIAM E. LEAHY

Mr. Leahy:—If you Honor please, we wish to interpose at this time a motion for a directed verdict as to all of the defendants on the entire case as made out by the prosecution up to this time. I thought that perhaps in the economy of time and also in a more orderly presentation of the case I might present to your Honor the case with reference to certain of the defendants first. I mean by that, the individual defendants.

LEON ALPHONSE MARTEL

First, I would bring your Honor's attention to the defendant, Leon Alphonse Martel. I have looked over the record in this case carefully with reference to any testimony which might relate to him in any manner, even most remotely, to show that he was engaged in any unlawful conspiracy such as is detailed or outlined in the indictment. I find no evidence whatsoever which could connect him in any way with the conspiracy. For that reason I say that as to the defendant Leon Alphonse Martel there is no evidence to show that he is in any wise connected with the conspiracy, and therefore that as to him the motion is proper.

R. G. LELAND

Take the one immediately before that—Dr. R. G. Leland. There is no evidence in the case, as I recall it, other than the letters which were written in the shape of answers by two men who worked in the Bureau of Medical Economics. Those letters went in under the background theory of the indictment. They were not offered in proof of the charge of the main case. In other words, they were introduced on the theory on which your Honor admitted them, that they tended toward establishing those allegations in the indictment which set forth the general background, but not in any way in the charging part of the indictment itself. There is no letter other than the one which was presented to your Honor this morning in the shape of a green carbon copy which shows any connection of Dr. Leland personally with this conspiracy. If I am wrong about that I shall be glad to be corrected, because my recollection, and the search which I have made of the many documents in the case, is to the end that Dr. Leland never personally wrote these letters, but that those in his department wrote them, and as I understand, the question was put under his authorization and direction as he was the general supervisor of that department. These letters relate in no wise to the charge of conspiracy as cast, and relate entirely to that portion of the indictment which concerns the background. Therefore there is nothing moved up from the foundation which was laid in the shape of background into the charging part of the indictment itself in so far as Dr. Leland is concerned.

The letter which was introduced this morning, written in December 1937, merely shows that there had come to Dr. Leland's attention this bit of information that the Comptroller General had ruled that a loan made by H. O. L. C. was improper or illegal. Now, certainly on that information which had come to him it cannot be charged that he had first knowledge of the scope of the conspiracy and, secondly, that he had entered into the conspiracy for the purposes charged in the indictment.

MORRIS FISHBEIN

Now, if we move up further we find Dr. Fishbein in the same list. There is no evidence that Dr. Fishbein wrote anything in this case except, as I recall that some time in the fall of 1938 he wrote a letter to a Dr. Hammerly in which he stated that Hammerly's letter had been referred by him, Dr. Fishbein, to another bureau of the American Medical Association because it was the interested bureau.

The only other evidence in the case, as far as Dr. Fishbein is concerned, is the evidence that he was the editor of THE JOURNAL. It may be stated or argued that because Dr. Fishbein was editor of THE JOURNAL and because THE JOURNAL in October printed an article which was written by Dr. Woodward, that therefore Dr. Fishbein had knowledge of this entire conspiracy as alleged in the indictment; that he entered into the same; that he continued a member of the alleged conspiracy, and that he is chargeable with all of the allegations against all of the conspirators in this case.

There is absolutely no evidence against him in the shape of any writing on his part. There is nothing whatsoever to indicate that he knew anything about the conspiracy. The article came into THE JOURNAL as other articles come into THE JOURNAL. If it happened to concern G. H. A. that does not mean that Dr. Fishbein is chargeable with the scheme or com-

bination that is alleged in this indictment and that he entered into it and continued therein as a conspirator from that point down. There is not a line in the record to connect any one of those three defendants in any way, shape, or form with the conspiracy as outlined here.

DR. WALLACE YATER

If we pass now to page 3, we have Dr. Yater. There is no evidence against Dr. Yater of any activity whatsoever except a lone motion which he made or which was reported to have been made by him in one of the minutes introduced in evidence. Beyond that there is no line whatsoever of evidence, as I recall it, which connects Dr. Yater in any way, shape, or form as a conspirator in this case. The evidence is entirely silent except for that single motion.

WILLIAM JOSEPH STANTON

The same is true with reference to the defendant William Joseph Stanton. I believe he made a motion at one time in one of the meetings of the District Medical Society that there should be a committee appointed to go out to the American Medical Association and see what could be done with reference to G. H. A., and report back.

EDWARD HIRAM REEDE

There is no evidence against Dr. Reede whatsoever, except that he sat in the trial of Dr. Scandiffo. That trial was had, if your Honor please, by the Executive Committee of the District Medical Society. Dr. Reede was a member of the Executive Committee. There is nothing which Dr. Reede said in any meeting; there is no action which he took; there is no conduct which can be charged to him whatsoever in relation to anything done with respect to any of the acts which the Government offers as ground for the proof of this conspiracy, save and except that he sat there as a member of the committee which tried Dr. Scandiffo.

As I recall it, there is in evidence at this time the constitution and by-laws of the District of Columbia Medical Society. If there is not, we have in evidence the report which was made in connection with the Scandiffo case which is the evidence on which and through which the conduct of Dr. Reede must be examined, analyzed and read to determine whether or not he has any connection whatsoever with this conspiracy.

The Executive Committee, under the constitution, is the one which is charged with the examination of charges preferred or recommended against any member of the District Medical Society or any question of discipline involved. The Executive Committee does not originate the charges, but they come over to that committee from the committee which has been known or identified as the C. C. & I. M. Committee.

In this case there came in the ordinary course of procedure and in accordance with the District Medical Society's constitution and by-laws information in the shape of a recommended charge against Drs. Scandiffo and Lee. Dr. Reede, in accordance with the duties placed on the Executive Committee, sat in the meetings which heard evidence in the Scandiffo case.

There is no evidence whatsoever to charge Dr. Reede with any knowledge that that particular disciplinary trial which was had with reference to Scandiffo had any connection whatsoever with any particular combination, scheme or confederacy under this indictment.

If an individual defendant can be held responsible for a single isolated act which the prosecution picks out as an act which fits into a picture, and then charges that individual defendant with the entire picture, then no one would dare to do anything or could legally do anything in connection with such a charge of conspiracy.

But the prosecution must go one step further. First, they must prove the underlying conspiracy. Having proved the underlying conspiracy, they must bring the knowledge of that home to the individual defendant charged. Having brought the knowledge of it home, then they must go one step further up the ladder and prove that, pursuant to that knowledge and with full possession of it, that individual defendant did something in the furtherance thereof. Merely to prove that an individual defendant did an isolated act which later on, under the scheme or theory of the prosecution, might have fitted into the general picture, does not bring criminal responsibility on that individual defendant solely because he did only that isolated act. They have no proof that Dr. Reede or Dr. Stanton or Dr. Yater had any knowledge of the general picture as presented and painted in this indictment. They only prove that with respect to each an isolated act was done. It was done for the specific, definite purpose not of the general conspiracy, but to complete, we have

shown, the isolated act for which that particular individual at that time was either responsible or in the conduct of which he was engaged.

For instance, Dr. Reede was engaged in the trial of Dr. Scandiffo. Dr. Stanton was engaged in making a motion, because he wanted a definite thing done, according to the motion; he wanted to find out the attitude of the American Medical Association, whether the American Medical Association would cooperate or assist.

Dr. Yater made a motion which is so unimportant that there could not be charged to him any knowledge whatsoever if a conspiracy or any act done in furtherance of it.

What I wish to state to the court—and perhaps I am doing it very poorly—is, emphatically, that the prosecution cannot hope or expect to hold individual defendants in this charge of conspiracy unless they first prove the underlying charge of conspiracy applicable to each one of them. Then, having proved that, they must go one step further and show that that defendant, with full knowledge of that particular conspiracy, then and there did the individual act or a few acts or three acts, whatever the individual defendant may have done in furtherance of and in pursuance of that conspiracy.

Furthermore, they must prove that it was done with the intention of furthering the conspiracy. If, for instance, an individual defendant may have committed an act which he was under obligation to perform, and in the performance of which he was engaged, and the result of that may have an interpretation placed on it by the prosecution construing it to be in furtherance of the conspiracy, nevertheless, unless they go one step further and prove that the individual defendant intended that act to further the conspiracy when he did it, the act is not binding against him as a conspirator and it is not evidence that he was such.

In no place in this proof will it be found that in this sweeping charge which they have made, this drag-net against all the individual defendants solely and only because they may have done individual acts, do they prove that there was the cohesion which we find where the other conspirators gather or assemble together. They have taken the individual blocks, set one up against another, and they ask your Honor to believe that those cease to be individual blocks, and that they are all one board, charged against all those who have taken any part whatsoever therein.

Now, as I recall the testimony against Dr. Young it relates only and solely to the point that he was on a credentials committee, or on some committee, of the Eastern Dispensary & Casualty Hospital during a portion, if not all, of the time covered by this combination, which is charged.

They don't charge that Young in this charge of conspiracy with having done anything more than that in connection with the Dr. Selders' application to the Eastern Dispensary, it was denied; and that he was on some committee in Casualty Hospital which had come before it the question of that application in some form or other. A good deal of debate was had in connection with the criminal responsibility of the hospitals, as hospitals, in this connection before any of that evidence came in. Now, we find a rather amazing situation with the hospitals. It is very bothersome: bothersome as a matter of law, and bothersome because of the confusion about it in the record, and it leaves counsel in the situation where it is difficult by taking any portion of the evidence and directing the Court's attention to it, to show we depend upon this particular piece of evidence or that, but if this record discloses one thing above another, it is this: that each hospital is a separate, distinct, legal entity. That hospitals, as hospitals, as separate, distinct, legal entities are charged with being conspirators. Their staff are not charged as conspirators, either general, special or courtesy staffs are not charged; their various executive committees or councils, or boards of directors, or trustees are not charged. It is the hospital qua hospital, as a legal entity, which is charged as a conspirator in this case. Therefore, the hospital, as a hospital, a legal entity, can be criminally bound only if the hospital as a hospital and legal entity acts.

The second thing which is clear in this record is that the administration of the hospitals, as such, and as corporate entities, is had through responsible administrative lay boards. The medical staff can do nothing to bind the hospital as a hospital. I don't care whether you call it an executive committee; whether you call it a council; an advisory board, a medical staff, or by what name it is identified, the fact of the matter is that the executive committee of doctors, the medical staffs, courtesy or regular, had no more power to bind the hospital in a corporate act than a stranger has to do the same thing, and there isn't a single corporate act of the hospital which has

been taken in this case, and which has been proved in this case except ones made by the administrative lay board of the hospital; and I think it is a fair statement to make to the Court—I don't wish to misrepresent the testimony or mislead—but I think I cannot be criticized for making the statement if I say that the boards of the hospitals mentioned in this indictment are appointed, not by any medical staff, not by any courtesy staff, not by any recommending committee of doctors, but by a lay administrative board. Therefore, the corporate act, the hospital act, binding any hospital here, to determine whether or not it is a conspirator, is the act of the administrative board; and there isn't a line of evidence which charges a single member of the administrative board in this case with any act done with knowledge of this conspiracy, or in furtherance of it.

We have as the administrative boards perhaps imposition—let us put it for the sake of argument, imposition by the medical staff—maybe there was a quiet little understanding in the medical staff that they would recommend to the administrative board that Dr. Selders should not be appointed to the staff. Let us take it the full way, the way the prosecution would like to have it presented—that there was no foundation in fact or inference for the rejection of Dr. Selders to the staffs of the hospitals, notwithstanding which these little executive groups, or a membership committee—advisory in jurisdiction—possibly, as a result of such agreement among themselves, with no right or reason—recommended to the administrative boards that Dr. Selders be rejected, and the administrative boards follow that recommendation, and the hospital acts through its administrative board, and says Selders is rejected. Does that make the hospital a conspirator? Of course not. The hospital may have been imposed on, but before the hospital can become a conspirator it must have known of the conspiracy; it must have acted in furtherance of the conspiracy, and intentionally so. Therefore, if an administrative board has been imposed on by anybody which may recommend to it such action, and the administrative board follows that advice, then it is in the situation, perhaps, of having accepted bad advice, but that doesn't make it criminally responsible as a conspirator, and there isn't a single line in the case which shows any hospital, through its administrative board, with full knowledge of this conspiracy, of its scope, its purposes, and intent, intentionally took any act with respect to any member of this staff knowingly intending to further or do anything in connection with this conspiracy itself.

Now, those points were not before your Honor when the broad question was argued as to whether or not the hospitals could be brought in as conspirators. They cannot be so brought in because Dr. Smith happens to be on the staff of the hospital, and Dr. Smith is a member of the Medical Society, and Dr. Smith says something against Dr. Selders. That does not bind the hospital as such. It cannot be if an executive board acts in a certain manner in making a recommendation and some, or if all, of the executive committee members, whether on the medical staff or board of the hospital, and being members of the American Medical Association or District Medical Society. They must be one step further and show that the responsible binding officials, with authority to bind the hospital, have bound it in some way with knowledge of this conspiracy, in scope, intent and purpose, and having that full and complete knowledge had cooperated in the manner charged to accomplish the illegal end intentionally and knowingly.

Now, with that fundamentally in the case, with reference to the lack of proof binding the hospitals as conspirators in this case, simply because some member happened to write a letter, or someone else on a particular staff who may like the title on the staff and uses it in a particular letter, transports information which went from the hospital to a particular one of these G. H. A. members. That doesn't bind the hospital, nor make the hospital a conspirator in this case. Now, again bringing that thought back to the analysis of the testimony which concerns Dr. Young, we have here only that he acted as a member of an executive committee, or maybe as chairman—I can't recall which at this moment—but in any event he acted in a responsible position in some connection with the hospital to which he was attached. Maybe he was chief of staff; maybe chairman of the executive committee; maybe he was anything we want him to be, the point is what has he done? We know that the executive committee was composed of certain members of the profession. There hasn't even been an intimation, that with respect to that hospital, anything was done so far as changing the rules and regulations of it is concerned. We know that for fifty years that Eastern Dispensary had a regulation with regard to the right of the members of the medical profession to practice on its professional staff. Can

there be any doubt about that testimony? We know that on this particular committee which passed on this application we had a couple of doctors against whom the prosecution has not had the temerity to charge them with the conspiracy. We know that Dr. Magruder MacDonald, Coroner of the District of Columbia, was on that committee, and that out of that committee came a recommendation against Dr. Selder's appointment.

Therefore, not merely is it true that there was a conspiracy, but the hospital itself becomes a conspirator. I submit we cannot go that far in the most enthusiastic support of the indictment. We cannot take it and say an indictment for a conspiracy is difficult to prove and can be established, in most instances, only by circumstantial proof and, therefore, every circumstance we offer ought to be construed as a sanction, and *prima facie*, one to establish those charges. We cannot do that. After all, each one of these defendants has a right involved in this case, a most serious and sacred right, so far as he is concerned. It doesn't seem to mean much when we come to take circumstances in this case, in the shape of documents, as to what these hospitals have done in the past. They don't want to have the Court take into consideration the presumption we have already mentioned, and through which this evidence must be strained under the law, and that is if these acts could have been done just as well in pursuance not of a conspiracy but of a duty, lawfully imposed on a defendant, then we cannot distort the act done into one done in furtherance of a conspiracy where there is nothing in the evidence to color it whatsoever.

Now, what did Dr. Young do?

THE QUESTIONNAIRE

Where is there anything in the proof to show his knowledge of the conspiracy? They pick up a questionnaire. They say, "There is the proof." Dr. Young was asked a question and he answered it. Now, there is no particular sanctity with which we surround a written document which causes its contents to be judged under different rules of law than the ordinary spoken word and, suppose in this instance, Dr. Warfield, who was the member of the committee on hospitals in the District Medical Society, had met Dr. Young in the street and said, "Doctor, how many men have you over there on the staff who are members of the District Medical Society, and how many are not"? Suppose he said, "Well, you know, for fifty years we have had a rule and under that rule usually the only doctors who can qualify are members of some recognized society." Does that make him know all that is said by the committee as such and by every member of it? Does that make him a conspirator in the sense that first he gave an answer of that sort to Dr. Warfield? He didn't invite it. He was asked the question, and I hope we still have the right to answer questions. I hope we don't have to evade them or play dumb when a question is asked about G. H. A. I hope that when someone meets another on the street, or writes a letter, that such person to whom the question is propounded or letter addressed will not be required to ignore or evade it, or not be permitted to give a true answer to it, or sit on a cloud like some cherub. If he answers honestly, as most men are presumed to answer, and do answer, if such answer is critical of G. H. A., does that make him a conspirator? Of course, that doesn't make him the subject of complete and full knowledge of this conspiracy as charged within the four corners of this indictment.

Now then, does that answer that had been given mean, not only, "Do you know about G. H. A., and all this, but when you answered that question you did it for one reason"? Just notice the stretch to which they push the Court. See how they try to make that as qualifying evidence against Dr. Young, and Dr. Young states—and where I say "Dr. Young," it is applicable to all the individual defendants—they say that because he made that answer that Dr. Young had only one purpose in his mind. That he made it with the intent in some way to assist or aid in the furtherance of the charges contained in this indictment. In other words, to hinder, impede, destroy—use any verb you may wish—G. H. A.

That is a long jump, if your Honor please, in the line of logic and reason. Because Dr. Young made those answers on the questionnaire, which are answers of fact: they were not lies, were not misrepresentations; they were not concealments; because he told the truth, this one doctor who was a member of a society committee—and I hope the District Medical Society has the right to be interested in the hospitals which they have built up and maintained for fifty years before somebody thought about G. H. A. I still hope the District Medical Society will under the Court's ruling not be shut off or barred from having some interest in the standards of our hospitals simply because of G. H. A.—and simply because the chairman of the hospital

writes a series of questions indicative of only one purpose, to obtain information, the accuracy of which if it be enclosed in a letter or the person to whom it is addressed answers those questions, therefore this prosecution says that the person who answered those questions had but one thing in mind, and that was an intent to further the charge as laid down in this indictment, to hurt G. H. A. Now then, let us go another step further. If there is one presumption which must be admitted, and which cannot be contradicted in any way under the law, it is this: that if we objectively segregate an act done, and all there is before the examiner is the act done, and we put on that act the microscope of the law, and we try to find its motives, and we find that we can under that examination and the analysis have a reason which comports with honesty of purpose in its performance just as well as we can find one which under the interpretation of those charging that act against the person, that it was done with improper motive, then the act must be construed along the line of honesty of purpose, because most men do act honestly and uprightly, and in accordance with the law; and when a charge of this kind is made against men who have spent lives without any implication of crime against them, it is only fair that they should have the benefits in this case, as in any ordinary case, of the protection which the same law gives to them for the violation of which they are being prosecuted.

Now, all the way through, if the Court please, and I say this as seriously as I ever said anything, I can't comprehend why it is that even in the argument on questions of admission of evidence, the prosecution won't grant to a single one in the American Medical Association, the District Medical Society, any single hospital, anybody in this wide world, any honesty of purpose in criticizing G. H. A. They are beset, they are simply overwhelmed, they are befuddled with the idea that if anybody criticized G. H. A. they are convicted by their very act—he is a crook, a criminal; and he had the basest of motives when he did it.

Now, take Dr. Young—using him as an example. They won't give to the executive committee which recommended against Dr. Selders any honesty of purpose; that, in fact, those people did in fact investigate him. Perhaps they did find out a little something about Dr. Selders, and perhaps those men who hold high positions in the District of Columbia and in this community, who have honorably, for a number of years, served the hospitals to which they are attached by being members of their staff, were not actuated by these evil motives. Perhaps they did, after investigating Dr. Selders, tell those hospitals, the standards of which they have maintained through the years, that they could not in justice to the patients, the public and the profession admit Dr. Selders to the privileges for which he made application. Now, that is the presumption with which we start out. Why should we say that Dr. Magruder MacDonald, because he has not been mentioned as a conspirator, why should your Honor be asked, if he did reject Dr. Selders' application, that he did so because he wanted to kick Dr. Selders out regardless of whether he was qualified or not, or because he was a member of G. H. A.?

If it wasn't in this forum, and if that information came to your Honor on the street, you would immediately say, "Dr. Magruder MacDonald had some reason for doing it. Let's find out the reason for it." Do we know? No. The prosecution leaves this evidence suspended in the air, and wants the jury to guess or accept an interpretation which will be so ably argued by the prosecution to them, and that is the danger against which the law protects, with reference to conspirators, particularly in this sort of a case where only circumstantial evidenced is urged against them, because, after all, the verdict will be based, not on the evidence and the reasonable inferences to be drawn from it, but the verdict will be based on those inferences which counsel on one side or the other, through his ability so to do, will persuade the jury they should draw. That is not the kind of a verdict we ought to have in any case. I submit you cannot find in the evidence against Dr. Young a common purpose to hinder, or destroy, G. H. A., or do anything to G. H. A., with any or between the other defendants in this case, in any way, shape, or form; and I say that is likewise true with reference to Dr. Yater, Reede, Martel, and Leland, and Dr. Fishbein of the American Medical Association. As to them the evidence is so sketchy as to be negligible, and any inferences to be drawn against them are so stretched beyond logic and reason that it would not be fair to hold those men in against this mass of documentary proof, in connection with which they have their evidence brought out against them. So far as Dr. Fishbein, for instance, is concerned, the District Medical Society may be swept out of existence; he doesn't

know it exists; there isn't a line of evidence that he ever heard of the District Medical Society. He never talked to one; he never wrote to one; he never did any act with reference to any other act which the District Medical Society did or any of its members did. The same is true with reference to Dr. Leland. You can wipe the District Medical Society right off the list of those societies in existence, so far as Dr. Leland is concerned. He just doesn't know about it, but they wish to confuse the record by bringing in under this background theory this testimony in the shape of documents written by Laux and Simons in response to inquiries from people all over the United States with reference to various forms of practice of medicine, which were springing up in communities, in which those particular inquiries came from.

DR. A. C. CHRISTIE

Now, if we pass from that point on to the other defendants in this case—I am not going to name them name by name—but let us take Dr. Christie. Dr. Christie seconded a motion; that is what he did; he seconded a motion, but they will say to your Honor, "Yes" that is all, "but it was the resolution of Dr. Wilson," and that resolution they have considered to be so important that they have quoted it in the indictment.

There isn't another thing Dr. Christie did; that is everything he did. They have not proved that he was active in any way, shape, or form, in connection with anything else done in furtherance of this conspiracy, but in that lone, isolated act.

Now, let us examine that resolution, because we have heard so much of it; it is considered so important. What was the result of that resolution? They say it was adopted. That doesn't give it any more force or effect than it had by its terms. It was a resolution to go to a committee for examination, study, and report back. That is all it was. The Society couldn't take any affirmative step in the furtherance of the conspiracy, or in buying a dozen eggs, under that resolution. It couldn't have incurred an obligation under the law on the strength of that resolution. The only reason that it is in the indictment—and we know why it is there—is because it sounds bad. It may be good advertising, propaganda—and the indictment is not above propaganda in the case—because if we can find something in the resolution that sounds bad, something which the District Medical Society was doing against Group Health, we will spread it. It is just the same sort of a resolution which we make here before your Honor when we ask your Honor to take under advisement and study some action on a matter which is before the Court. I am asking your Honor now for a directed verdict. I am asking your Honor to take it under advisement as you sit here and listen. Am I doing something now to persuade your Honor to join a conspiracy against G. H. A. because, forsooth, I am asking that the conspiracy charge here be dismissed? The terms of that particular resolution do not do more than ask another committee of the District Medical Society to study and report back, and Dr. Christie seconded that kind of a motion. Negative action. In no way positive, save and except that whatever was done in that case would be done not in pursuance of that resolution but after careful study by a committee of the American Medical Association. Your Honor knows what that study brought forth. It brought forth the resolution of December 1st, and now they criticize that because they say it is camouflage. We did nothing except with the basest of motives, and with only one objective; to destroy G. H. A.

That is everything Dr. Christie has done, and because he seconded a motion for the adoption of a resolution which looked toward careful study and deliberation on the part of a committee he, therefore, now is charged with the full knowledge of this conspiracy, and the intention which he had in seconding that motion was to further this conspiracy, as alleged in this indictment.

Now, of course, one more thing: if any isolated act done by any single member charged as a conspirator is prima facie proof that the individual is a conspirator, why, we might just as well wipe out of the books the rules of evidence, and I know of no armor plate which anyone can wear to protect himself securely against being charged with being a conspirator. Now, let us come down to the entire case, including all of these defendants whose names have not yet been brought individually to the attention of the Court. I am going into the corporate defendant for a moment. Let us take the Washington Academy of Surgeons. What proof is there in this case that the Washington Academy ever joined in the conspiracy whatsoever? There is proof here that the Washington Academy of Surgeons had referred to it for its report the question of Dr. Selders' qualifications, and

they recommended back that Dr. Selders didn't have the qualifications which would warrant his admission to the staff of the hospitals which had made the request for the information. That is all there is. That leaves the record in this shape; if they wish us to guess then our guess is as good as theirs as to why Dr. Selders didn't have the qualifications, and if it is to be made a guess then the guess which is based on the common experience of mankind with respect to responsible individuals charged with the performance of a duty must prevail.

I don't know on what theory the prosecution can move this Court to think that every motion which is made by any human being which came in contact with G. H. A. transformed that individual from the honest, upright, reputable citizen, which he has always been, into a base conspirator to accomplish the destruction of G. H. A.

Your Honor knows that if the report of the Washington Academy of Surgeons can be considered to have been made with an honest purpose, after investigation made to advise those who have made the inquiry as to the doctor's qualifications, that interpretation must, under the law, be adopted. We do not have to go further than a case which was tried here in our own Court, in which Justice Letts had before him the same question which I am presenting to your Honor now and which he disposed of on a motion for a directed verdict. It is only a few Honor please. It is the case of *U. S. v. and Helpers, Local 639, of the International Brotherhood of Teamsters, Drivers, Stablemen and Helpers of America*. He said this:

"It would be impossible for me in a few words to review the evidence in this case, or to announce any conclusions on the many questions of law that have been presented in argument of counsel, or to deal with the construction of these various acts which have been read.

"I have approached this matter from what I thought to be the fundamental ground, indeed an elementary ground, and have searched the evidence to determine whether or not the Government has shown criminal purpose.

"I realize that intent, being a condition of the mind, is not always, perhaps seldom, susceptible of direct and positive proof. It is a matter of inference from facts and circumstances appearing in the evidence. The inferences, I think, lack the inference that arises from circumstances in the consideration of criminal procedure, but not only indicates guilt but it might be inconsistent with any rational theory of innocence."

Now, that is the burden this prosecution has sustained in the interpretation of the evidence presented to your Honor, as *prima facie* proof of guilt. It must be rationally inconsistent with innocence.

"Here, of course, the intention sought to be shown is that the defendants entered into an unlawful plan to interfere with commerce and trade. We are not dealing with the subject as we would if it were an action for injunction, where only civil rights are involved; but here we are dealing with criminal elements. It seems to me that the evidence clearly shows that all these defendants did is just as consistent with innocence as with guilt, and in order to send this case to the jury, it would be necessary for me to find, in finding a *prima facie* case, that the evidence did preponderate at least in favor of the Government theory.

"I am of the impression—"

And then the Court proceeds to examine a piece of evidence that came in:

"I think we might determine the purpose and intention which underlay the conduct in the light of what had been barred with respect to this jurisdictional question, and the knowledge which the defendant had of the outcome of it.

"Therefore, all told, I am of the opinion that the Government has failed to make out a case by the substantial evidence which would justify this court in allowing a verdict to stand upon it. According I will call the jury and sustain the motion of the defendants to direct the verdict."

Now then, isn't it just as consistent with the theory of innocence on the part of the Academy of Surgeons to say that those men who are listed—the finest surgeons in the District of Columbia; every doctor who practices surgery generally is on it—to say that they acted innocently rather than to sweep that aside, and with reference to this prosecution, and for its purposes say that every last one of them has suddenly transformed himself into an individual who would stoop to disqualify a qualified surgeon solely in pursuance of this conspiracy? I think, if your Honor please, to have charged the Academy of Surgeons in this case is an insult. I think it is groundless and baseless, on the evidence; and I think it is an attempt to smear these individuals so that perhaps by that smear the Court will weigh the evidence through that dark smear cast upon them instead of the law.

There isn't a single thing against this Academy of Surgeons as a separate organization of individuals which justifies the inference that at any time they had knowledge of this conspiracy or that they knowingly and intentionally did what

they did—and they did nothing but make an investigation of a man whom the prosecution has not dared to put on the stand—with any legal intent or purpose.

HARRIS COUNTY MEDICAL SOCIETY

Now then, let us come to the Harris County Medical Society. That is all made out by and through correspondence, once more; inquiries back and forth. Now, I take it, if your Honor please, that if this Harris County Medical Society had a right to do what it did, then it could do what it did under the law, and unless they can show that that act was done intentionally and purposely in furtherance of a conspiracy, which was illegal in scope, then the Harris County Medical Society had a right to do just what it did do. Now, the Harris County Medical Society had a right to write to the District Medical Society in Washington in order to obtain information about one of its members, and the District Medical Society had a right to write to the Harris County Medical Society. If this were a suit for libel, qualified privilege would lie.

Now, we find correspondence back and forth, and we find an investigation being made into the Harris County situation with reference to Selders joining in the work which they considered to be unethical. If it is unethical then they had a right to discipline any one of their members and if such disciplinary action was not done in the furtherance of a conspiracy, then they had the right to do everything, which they did, and they finally did nothing. That is the amazing thing in the case. They write, after their examination, as to whether or not they can do anything; they write to the American Medical Association; and there is correspondence back and forth, and finally neither side takes jurisdiction with reference to Selders, and Dr. Selders was never disturbed. Now, here is what they are charged with: they are charged with having done nothing save make an honest investigation to see whether they can do anything, and they are finally advised they cannot, and dropped the proceedings.

Therefore, they are charged here because they made an investigation and after that investigation, upon being advised by one of their members, they decided nothing could be done. Now, because people study as to what to do, write letters, chat about it; therefore they have joined a conspiracy to accomplish the purposes as charged in this indictment. I submit that first of all the very essence is a combination, an agreement and breathing together, a meeting of the minds, on a common purpose; and if you analyze this testimony you will find a floundering around. What they did was to try to determine whether they could do anything. There was no agreement at all; one saying one thing and another another thing. Now they ask your Honor to, because John Brown expresses one opinion, and John Smith says, "No," to hold one. Which one? Are we to be bound by John Brown because the prosecution asks that, or is it John Smith; or does it come once more to this: that under the law after all in a meeting of a society members thereof have the right to express their views and the membership is bound only by the act of the society as a society, and what was said by members in a meeting is not binding upon the membership as a whole, until it is reduced to the action of the society.

AMERICAN MEDICAL ASSOCIATION

Now, if your Honor please, I want to seriously bring to the Court's attention the evidence against the American Medical Association. I presume there were 225 to 250 documents introduced in this case against the American Medical Association, and the individual defendants, officers thereof.

We said we have documents, perhaps some sixty to eighty, which were signed by Dr. West. We have some fifteen or twenty signed by members of the Dr. Leland Bureau. We find an examination made of the Washington hospitals in which on the report thereof to the hospitals is attached the so-called Mundt resolution, but I say this to your Honor and I think it is a fair presentation of the evidence: 90 per cent of that testimony was introduced on the background theory: these resolutions about which your Honor just heard this morning. They are all reports to the house of delegates made by the various bureaus of the American Medical Association to the house, or by the committees referred to, resulting in the adoption by the house of delegates. They are all back in 1934, 1935, and 1936. Now, certainly we are not going to be charged with a conspiracy entered into Jan. 1, 1937, and in doing acts in furtherance of that conspiracy at a time when Group Health was not even organized; and, remember this, your Honor, the American Medical Association had the undoubted right to do every single act which it is charged was done in those years.

Section 3 of the Anti-trust Act has no jurisdiction outside of the District of Columbia, and when the American Medical Association met in its House of Delegates and adopted resolutions, it was doing what it had a right to do. Every letter which was written was written in accordance with that right, which it had the right to do. And the American Medical Association cannot be dragged by the hind legs into this case unless you find that the American Medical Association, as such a distinct corporate entity, bound itself by some corporate act to get into this conspiracy.

Now, what do we find?

Ninety per cent, as I have said to your Honor, was on this background of this conspiracy which your Honor admitted on the theory it established some *prima facie* proof. Therefore ninety per cent of this evidence has nothing whatsoever to do with the conspiracy itself.

Now, then, we have a meeting on November 6 in Chicago between two members of the District Medical Society, Dr. Hooe and Dr. McGovern, who had gone out to Chicago for advice in connection with the G. H. A. matter, upon the resolution which I advised your Honor some time ago was introduced by Dr. Stanton. We have the article of October 2 in THE JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION.

Now, those two pieces of evidence, outside of some letters which were written, to the effect that we have opposed G. H. A., and statements made, such as "We have opposed G. H. A.," are the only evidence in this case against the American Medical Association.

Now, remembering again, that the American Medical Association has the right to do in forty-eight states of the United States, just what it did, it had the right to write the article it did, and distribute it in forty-eight states of the United States, it had the right everywhere in this country, I mean, in the continental United States, except the District of Columbia, to do what it pleased so far as the Anti-trust Act was concerned, excepting only in the District of Columbia under Section 3.

Therefore, your Honor ought to find that unless, beyond a reasonable doubt, there is evidence in this case *prima facie* to hold the American Medical Association in it, that it ought not to be dragged into it.

In other words, in deciding that question you cannot give to the statements made and the acts done by the American Medical Association the same quantum of evil interpretation which the prosecution argues as to all for the reason that with respect to all of it they had this undoubted right to do what they did.

Now, what was done?

Dr. Woodward wrote an article, and he wrote that article in October 1937. We have this meeting on Nov. 6, 1937. You will find that the sum and substance of the meeting in November 1937 in Chicago was "go back and employ attorneys and act on legal advice." Now, that is everything there is, I say.

They say "Ah, but the two met."

Suppose they did!

The evidence is that the District Medical Society is a constituent member of the American Medical Association. What is more natural than that a constituent association would go to seek the advice of the national officers who have had the broader experience of having filtered into them the problems from the entire United States?

Now, then, is that evidence, if your Honor please, that the American Medical Association joined a conspiracy in November, November the 6th, that is, after the publication of this article? Remember that the argument is made, and it was made to your Honor before all this evidence was in, it was made that that article was one of the worst conditions in the conspiracy that could possibly be shown. And yet we have, a month later, Dr. Woodward sitting in that same conference with Dr. West, and what came out of it? These conspirators seeking the end and object and purpose of this conspiracy as outlined in this indictment?

What did they say? "Go back and hire a lawyer and follow his advice."

I submit, we cannot make out this evidence, or torture into it some claim that the American Medical Association, as an association, has joined this conspiracy when the last act we have of this American Medical Association is that act where on November 6 they told the representatives of the District Medical Society to go back to Washington and employ counsel.

And I still wish to bring to your Honor's attention the fact that Dr. Woodward in the publication of that article had the right to publish it. He didn't have the right to publish it in the sense I have just discussed it, your Honor, but he had the constitutional right to do it. And before they can construe that as an act done in connection with a conspirator, they must first find that Dr. Woodward knew about this conspiracy.

Now, what did Dr. Woodward know? Your Honor recalls the testimony. He came down here early in June, just before the convention at Atlantic City of the American Medical Association. Dr. Zimmerman testified to the time. He came down here and he tried to get some information about the G. H. A. and he couldn't. They told him nothing. And he went down to the convention, returned, and in October he writes an article setting forth his views with reference to G. H. A. which are based upon, as is shown in the article itself, absolute statutory proof, the proof of the articles of incorporation; and he as a responsible official writes what his views are with reference to G. H. A., in a medical association journal whose circulation is among doctors, to advise the profession of what his views are with reference to the G. H. A. Does that mean that the American Medical Association joined the conspiracy by that act? Are they arguing that the American Medical Association committed that act in furtherance of a conspiracy?

If your Honor please, and I want to insist upon that point, you cannot piecemeal this conspiracy. This conspiracy if it is a picture puzzle, has been put together; and when you want to hold a conspirator or one party in, you cannot take something out of the picture puzzle and say here it is. That doesn't make the conspiracy. This conspiracy is *one*—nothing else! They have detailed the three manners, the three ways, in which this conspiracy is supposed to be accomplished; By the denial of the right of consultation; by the refusal of admission to hospitals; and by the difficulty thrown in the way of G. H. A. on membership in staffs, both their own staffs and the staffs of hospitals. On October 2 there hadn't anything developed. Everything that happened happened after Dr. Woodward wrote his article. Nothing was done with respect to anything up to October 2 except they start pulling out these statements made in the minutes of meetings of the District Medical Society. That doesn't bring home the knowledge of a single one of them to anybody in connection with the American Medical Association; and they didn't bring the knowledge of the American Medical Association as such. Now, merely bringing the knowledge of something done to a single individual of the American Medical Association does not bring responsibility on the American Medical Association as such, an independent corporate entity, if the Court please.

Now, what else do we find besides the article and the meeting of November 6? This is a conspiracy, if your Honor please. Let us examine it coolly and calmly in the light of what the law says. Woodward is called by the Medical Society in November 1938. Here is the conspirator. Here is the man who is so evil and vile a conspirator that he has written this terrible article about which there cannot be a possibility of justification. And when he goes to the society he is called upon to make a talk at the meeting. G. H. A. is being discussed. The prosecution is saying that G. H. A. was the subject of destruction in that meeting. If there was any way they could pronounce its death knell, they wanted to do so. And here is the arch conspirator, the man who spread all over and through the United States this destructive article. It didn't go through the United States. It went to its members. It is a medical journal. It isn't a funny sheet. Woodward stands up in that meeting, as late as November, and counsels them to get counsel and to be advised by their counsel. Now, it is an easy thing to charge all these people in this gigantic conspiracy. It is an easy thing to evolve a theory in one's mind when sitting calmly down at a table.

It is an easy thing to hurl at the faces of those others the vilest of imputations which motivates such conduct, but when you come to prove it calmly, when we come to examine the proof after it has been introduced, and when we come to say "Let us wait just a minute. Let us see if this particular individual is the kind of individual to do the things you say about him. Or let us see if after all, he isn't a man just as you and I, entitled to your likes and dislikes, entitled to act in accordance with his likes and dislikes just so long as he doesn't impinge illegally upon the rights of another so to do."

And we find right here that this worst of conspirators, if your Honor please, having written an article on October 2, on November 6 counsels legal advice for the members of the District Medical Society and then in conjunction with that when he is in Washington and invited to say a word at the District Medical Society he renews that advice.

And does that sound like a conspirator acting in furtherance of a conspiracy? Or does it sound like the attempt of a pleader to drag by the heels into an indictment the names of men who should not be entered as conspirators and men who in no wise bound the American Medical Association?

You remember when Laux was on the stand. I asked him whether or not he had any right, or his bureau had any right to fix the policy of the American Medical Association. And

what was his reply? "The policies of the American Medical Association and the acts which bind the American Medical Association appear in the action of the House of Delegates, or of those done by the Board of Trustees within the jurisdiction allotted to them under the constitution." There isn't a single act in a single House of Delegates report which binds the American Medical Association with respect to a single thing on G. H. A. They quit in 1936. They go back to 1931, in one instance. And all of that evidence your Honor let in under the background theory. Ninety per cent of the evidence in here is on the background theory. "Ah," but they say "we have Dr. West. Now we switch from Woodward over to West as the arch conspirator."

Dr. West was the general manager of the American Medical Association and in three or four letters and in the conference of Nov. 6, 1937 in Chicago he said "We have opposed G. H. A." I am going to ask your Honor to think of the situation in the Apex case. I wonder what this prosecution would do if they had the evidence which the prosecution had in the Apex case. I wonder if they have in this case now the proof that these doctors went down and sat down in the G. H. A. clinic. I wonder if they could have the evidence or what they would say about it if they had it, that the American Medical Association sent a crowd down there and said "We camp right here in your clinic. We are going to break up your X-ray apparatus. We are going to see to it that you don't allow anybody in here. We are going to prevent everything that is done in this clinic." That is what they did in the Apex case with reference to the hosiery factory. We didn't do that. They assaulted, they committed crimes, they broke up the necessary machinery, they prevented hundreds of thousands of pairs of hosiery being sent out in interstate commerce. I wonder if the prosecution in this case had that kind of proof what they would be saying to this jury.

And what did the Supreme Court say about it? The Supreme Court said "Unless those acts were done with an intent to interfere with interstate commerce, there is no jurisdiction to proceed under the Sherman Anti-trust Act. And if those men did what they did not with an intent to interfere with interstate commerce, we don't care what their intentions may have been so long as the evidence does not show their intent was to restrain interstate commerce." The Court had no jurisdiction to proceed. And yet that case had to go clear to the Supreme Court to decide what everybody knows, outside of the heat of a trial, what common sense tells us. In this case you cannot tell me where anything Dr. West wrote is anything more than the truth. Has Dr. West no longer the right to be opposed to anything except what the prosecution wants or likes? What has Dr. West done in the evidence to oppose G. H. A.? Point to a single act. Show me a single thing Dr. West has done which shows an intent to restrain trade in the District of Columbia. If your Honor please, in the face of cases which the Supreme Court has dealt with, take the last case, if your Honor please, which the Court had before it, the case on the jurisdictional dispute, just what this dispute is if you want to make it that—they are making it a dispute in this case between the—I don't know the phrase they wish to place upon it—payment for service as against prepayment on a cost basis.

There is a dispute that existed. Have you found a single act done, if your Honor please, tending toward the restraint of trade in the District of Columbia? Except acts which they must interpret to be such. Can you point to a single positive act done by a single defendant in this case which tends to restrain trade in the District of Columbia? Every single act which any one of these defendants has been charged with doing requires for its completion the independent act or conduct of a stranger or a third person. The restraint of hospitals is predicated upon the December 1 resolution. That December 1 resolution is not self executing. It depends for its effectiveness, if at all, upon the independent action of third persons, to wit, hospitals. And those hospitals may do or may not do anything they choose about that December 1 resolution. Is there a single threat in this case that they would do anything to a hospital if the December 1 resolution was not complied with. But the prosecution say "Oh, we must guess there was." No, we don't. We don't guess in criminal cases. We prove.

Now, then, where do you find, if your Honor please, anything that compares to what was shown in the direct proof in such cases as the Hutcheson case or in the Apex case? In the Hutcheson case where they sat down there and just prevented interstate traffic moving; they had their little jurisdictional disputes among themselves, but they pushed it to the extent that they would not permit the interstate traffic in the transportation or shipment of beer. Where do you find anything like that in this case?

Let us get down to the reasoning which the Supreme Court has approved. And if your Honor please, I want to press firmly upon the Court at this time that if we are a trade organization, if we are engaged in trade, it doesn't matter so far as the Sherman Anti-trust Act is concerned and the Clayton Act, or the Norris-LaGuardia Act whether you pin the label on this side "labor organization" or whether I pin the label on this side "trade organization." We are engaged in trade. Our trade is the performance of our service, for a price. That is what they have stigmatized it. They have brought it out of the dignity of a profession down to the commercial plane of trade, sale and barter of medical care for a price. That is our business. We are engaged in trade. The Court of Appeals said so. All right then, if we are tradesmen, we have the right of tradesmen, and they cannot push us into an indictment upon one theory and say they hold us out of it upon another.

They cannot say we have violated the law, the anti-trust law, with the one hand, when they know they can produce from the files the other which says that under that theory you certainly have certain protection. The Clayton Act did it and under the Hutcheson case the Norris-LaGuardia Act says that in a dispute or controversy of this kind they cannot move against us. Now, let us have no doubt of that, if your Honor please. I have here this Hutcheson case and also the pronouncement of the Supreme Court.

Mr. Lewin:—Are you making this argument seriously?

Mr. Leahy:—You bet I am. Don't think I am standing here exercising my lungs.

Mr. Lewin:—I was afraid you were.

Mr. Leahy:—You are afraid of a lot of things that you don't know yet.

Let me give this to your Honor. He says, if your Honor please, am I making this seriously.

I am not going to read to your Honor the Clayton Act. Your Honor knows what that says. This is the LaGuardia Act:

"No restraining order or injunction shall be granted by any court of the United States, or a judge or the judges thereof, in any case between an employer and employees, or between employers and employees, or between employees, or between persons employed and persons seeking employment, involving, or growing out of, a dispute concerning terms or conditions of employment, unless necessary to prevent irreparable injury to property, or to a property right."

"and no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labor, or from recommending, advising or persuading others by peaceful means so to do; or from attending at any place where any such person or persons may lawfully be, for the purpose of peacefully obtaining or communicating information, or from peacefully persuading any person to work or to abstain from working; or from ceasing to patronize,"

and so forth.

"Whereas under prevailing economic conditions, developed with the aid of governmental authority for owners of property to organize in the corporate and other forms of ownership association, the individual unorganized worker is commonly helpless to exercise actual liberty of contract and to protect his freedom of labor, and thereby to obtain acceptable terms and conditions of employment, wherefore, though he should be free to decline to associate with his fellows, it is necessary, that he have full freedom of association, self organization, and designation of representatives of his own choosing, to negotiate the terms and conditions of his employment, and that he shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self organization or in other concerted activities."

Now, with reference to that, here is what the Court says:

"Were then the acts charged against the defendants prohibited or permitted by these three interlacing statutes?"

That is the Sherman Antitrust Act, the Clayton Act and the LaGuardia Act.

"If the facts laid in the indictment come within the conduct enumerated in Section 20 of the Clayton Act they do not constitute a crime within the general terms of the Sherman Law because of the explicit command of that section that such conduct shall not be 'considered or held to be violations of any law of the United States.'"

Now, if your Honor please, that phrase, the phrase "labor organization which is organized not for profit"—we have here a trade organization organized not for profit.

Now, if they say that it is a wide stretch to appeal to the Clayton Act in this particular, I say it is no wider stretch than they made when they appealed to the Sherman Act to make us a trade organization.

Mr. Lewin:—You mean when the Court of Appeals said it.

Mr. Leahy:—I meant you made it.

Now, if we are a trade organization, we are a trade organization. Now, he seems to say "Oh, well, you aren't a labor organization." Well, what are we? Our service is labor.

They so state it. They have offered evidence in here of the hospitals. Because the hospital report of the Emergency Hospital says that the business done shows it is one of the big business organizations of the District of Columbia. In other words, we are all in trade.

But you cannot separate the difference. The Court of Appeals has said we frequently call a bricklayer or a boot-maker a trade. And there is no doubt in the common law all the way down, trades or engaged in trade. It doesn't make any difference so far as the protection of the law is concerned.

If the Sherman Law says you can do it to the bricklayer or the paperhanger or the painter, and now the Court of Appeals has said that trade is so broad as to include the practice of medicine, then I say, your Honor, we have a right to protection under the Clayton Act.

Now, what does it say?

Remember, the hospitals are just as much engaged in trade. Here are three groups all engaged in the conspiracy.

"So long as a union acts in its self-interest and does not combine with non-labor groups, the licit and the illicit under Section 20 are not to be distinguished by any judgment regarding the wisdom or unwisdom, the rightness or wrongness, the selfishness or unselfishness of the end of which the particular union activities are the means."

Now, if your Honor please, so long as a union acts, a union is a trade association. That is all it is. A trade organization.

So long as a trade organization acts in its self-interest—and that is all that was done here under any charge—and does not combine with non-trade organization groups, the licit and the illicit under Section 20 are not to be distinguished by any judgment regarding the wisdom or unwisdom, the rightness or wrongness, the selfishness or unselfishness of the end of which the particular union activities are the means.

Now, I say if we are what they have pronounced us to be, if we are this trade organization, if the word "trade" means what the Court of Appeals has said it means, and if all it means is that actually we are just simply a labor organization—because that is all we do—we aren't engaged in any other activity, it is a nonprofit organization—and I say that you cannot stretch the law in order to strike us on the rebound and deny us the defense of the law to which we are entitled against attack.

The Court just went further in another decision involving a milk dispute between producers and the union, the drivers; out in Chicago.

What did the Court do there? It protected a milkman. Perhaps we aren't as high as a milkman. Perhaps the doctor ought not to receive quite so much protection under the law as the man who milks cows. Perhaps the dairyman engaged in trade is engaged in a trade which they will gladly give the protection of the law to. They didn't, even there. But the Supreme Court said they must.

Now, if the producer of milk, the ordinary dairy, is entitled to the protection of the Norris-LaGuardia Act, all three acts placed together, the trilogy of them, and if the Court of Appeals upon their urgency his pronounced that we are tradesmen, then upon what theory does this stretch of the imagination of the prosecution bring us to the point that it is out of the question that we should have any protection under the law? We are out in a plain or an island of utter abandonment where we have no rights left except to do the best we can where they hurl these charges against us.

I submit upon that theory as the case now stands they have proved it. They have proved us to be tradesmen. They have introduced evidence here before this jury that hospitals are nothing more than trade institutions; trade institutions for one purpose it was brought out, that is, for the care of the sick. And we think we have the right to the protection of a trade organization which the Clayton Act and the Norris-LaGuardia Act give to us.

I have already talked longer than I expected, if your Honor please, on this argument. But I say there has been no proof whatsoever here that the American Medical Association is in any way joined in the conspiracy. The only acts which they have brought forth as the acts of the American Medical Association relate only to the background theory. The acts which they have brought forward are so nullified by other acts which they find, for instance, with reference to the defendant Woodward, with reference to the defendant West—there is nothing which he did, absolutely nothing is shown which he did. He said, "We have opposed it." They have a right to oppose it, if your Honor please. The mere stating of opposition is not stating with the knowledge of a conspiracy which not yet had ever been formed according to the theory of the prosecution. And when we come down and in the same sort of analysis of the testimony in this case, we find that not an act is urged against Leland. Well, how is he responsible here? What has he done?

Every single letter relates to the background of the conspiracy. Because someone writes him a letter and he answers back:

"I have just been advised that the Comptroller General has declared the H. O. L. C. loan illegal,"—

probably it was published in the newspapers. He states some friend advised him of it. Can he be held as a conspirator with a knowledge of this?

Take Dr. Fishbein. Not a thing against him. But they ask your Honor to hold individually these members for a full knowledge of this conspiracy or for joint acts of their own with others in the performance of acts in the furtherance of this conspiracy. Now, simply because Dr. Fishbein happened to be the editor of the American Medical Association, Dr. Woodward was the head of another bureau, and Dr. West was the general manager, I submit there is no law which can be appealed to to state there was any conspiracy in this case such as is outlined in the indictment, and such as these defendants should be held in as prima facie defendants.

And for that reason, if your Honor please, we ask for a directed verdict, particularly with reference to those particular defendants whom I have mentioned; generally one and all of them; more particularly, as we have just stated, with reference to the individuals corporate and associated defendants, and in a group as to each and all.

And if your Honor please, we have prepared here the formal motions with reference to certain allegations in this indictment which I should like to file and present the other side without going over, to take up the Court's time further with them but will hand them to counsel.

There is a copy attached to each, and we will distribute them to the prosecution.

(The motions referred to are as follows:)

IN THE DISTRICT COURT OF THE UNITED STATES		
FOR THE DISTRICT OF COLUMBIA		
UNITED STATES OF AMERICA,)	
	Plaintiff,	
vs.)	No. 63,221
AMERICAN MEDICAL ASSOCIATION, et al.,)	
	Defendants.)

MOTION OF DEFENDANTS FOR A DIRECTED VERDICT

Come now the defendants American Medical Association, The Medical Society of the District of Columbia, Harris County Medical Society, Washington Academy of Surgeons, Arthur Carlisle Christie, Coursen Baxter Conklin, James Bayard Gregg Custis, William Dick Cutter, Morris Fishbein, Robert Arthur Hooe, Roscoe Genung Leland, Leon Alphonse Martel, Thomas Ernest Mattingly, Francis Xavier McGovern, Thomas Edwin Neill, Edward Hiram Reece, William Mercer Sprigg, William Joseph Stanton, John Ogle Warfield Jr., Olin West, William Creighton Woodward, Wallace Mason Yater, Joseph Rogers Young and Prentiss Willson, by their attorneys and move the Court to direct the jury in the above entitled cause to return a verdict of not guilty as to each and all of the aforesaid defendants.

And for cause therefor defendants state that no sufficient case has been made out against them and each of them under the indictment herein returned, to warrant and support a verdict on all or any of the charges alleged in said indictment.

Edward M. Burke,
William E. Leahy,
Seth W. Richardson,
Charles S. Baker,
Warren E. Magee,
John E. Laskey,
Attorneys for Defendants.

Similar motions were introduced covering the charges of restraint of Group Health Assn., Inc., restraint of its members, restraint of its doctors, restraint of other doctors, restraint of the Washington hospitals.

MARCH 6—AFTER RECESS

ARGUMENT ON BEHALF OF THE UNITED STATES IN OPPOSITION TO MOTION FOR A DIRECTED VERDICT

JOHN H. LEWIN

Mr. Lewin:—May it please the court, I take it that the purpose of any argument of this kind is to assist the court in arriving at conclusions, and I will try to bear that in mind in making my remarks. I certainly do not believe that it could help the court in any way for me to reargue the demurrer which was argued before your Honor for about a day, I believe, and then reargued in the Court of Appeals and decided. I do not think it could help the court for me to even dignify with an answer any far-fetched contention that the specific statutory exemption of labor unions in certain situations set forth in

the Clayton Act and with regard to procedure under the Norris-LaGuardia Act, would have any possible application here. And unless the court wants to hear me on an issue like that, I am not going to argue that.

THE COURT:—I am inclined to think that I am bound by the ruling of the Court of Appeals.

Mr. Lewin:—Yes. I do think that I might assist your Honor in calling the court's attention to an extremely pertinent decision, an extremely recent decision, from the highest legal authority of the land, the Supreme Court of the United States, which was handed down on Monday last, and which corroborates and sanctions and affirms the soundness of the Court of Appeals' decision in this case and clarifies the issues that are before your Honor.

That case is entitled *Fashion Originators' Guild of America, Inc., v. Federal Trade Commission*, and the opinion in the case is by Mr. Justice Black, and he speaks for a unanimous court. The case was decided March 3, 1941.

Now, there are some superficial differences between that case and this, and I want now to concede them.

The victims in that case, the people whose activities were restrained, were not medical cooperatives seeking to distribute services of that character to hospitals or doctors pursuing the economic side of their calling and gathering in their fees. But I take it that the fact that the victims in that case were manufacturers of ladies' dresses makes no difference here if we admit that the Court of Appeals has once and for all determined for the purposes of this case that the Sherman Act, Section 3, applies to restraint upon the activities of the victims in this case; but I must allude to it because I think that maybe we will save time if I do it.

It is true that the victims of the conspiracy were doing different things. Now, what did the actors do in the *Fashion Originators' Guild* case? They did things very similar to the things which the evidence in this case overwhelmingly establishes that the defendants indulged in. And to make good on that point, let me read to your Honor what the court said on that:

"Some of the members of the combination design, manufacture, sell and distribute women's garments—chiefly dresses. Others are manufacturers, converters or dyers of textiles from which these garments are made. *Fashion Originators' Guild of America (FOGA)*, an organization controlled by these groups, is the instrument through which petitioners work to accomplish the purposes condemned by the Commission."

That is, the Federal Trade Commission. The case came up from the Federal Trade Commission.

"The garment manufacturers claim to be creators of original and distinctive designs of fashionable clothes for women, and the textile manufacturers claim to be creators of similar original fabric designs. After these designs enter the channels of trade, other manufacturers systematically make and sell copies of them, the copies usually selling at prices lower than the garments copied. Petitioners call this practice of copying unethical and immoral,"—

I pause to ask if that has not a familiar ring in this case. You find it in every Sherman Act case including the case at bar. The way to reach your victim in a sanctimonious way is to use this term "unethical." Here they were a little more honest than the defendants in the case at bar, because they added to it the claim that these people were immoral. So they were unethical in the sense that they were doing something which the petitioners did not like in competition with them, and the claim is also that they were immoral, and they "give it the name of 'style piracy.'"

"and although they admit that their 'original creations' are neither copyrighted nor patented, and indeed assert that existing legislation affords them no protection against copyists, they nevertheless urge that sale of copied designs constitutes an unfair trade practice and a tortious invasion of their rights. Because of these alleged wrongs, petitioners, while continuing to compete with one another in many respects,"—

as in the case at bar—"combined among themselves to combat"—

Has that a familiar ring in this case? You remember in my reading of the minutes how on every page there was some plan offered by one of these defendants and the co-conspirators to combat.

"and, if possible, destroy all competition from the sale of garments which are copies of their 'original creations.' They admit that to destroy such competition they have in combination purposely boycotted and declined to sell their products to retailers who follow a policy of selling garments copied by other manufacturers from designs put out by Guild members."

They are simply going to withhold their trade. None of the members of our little group are going to have anything to do with these people whom they brand as unethical, or will not serve on their staffs, and they say, "We will not consult

with them. We won't even let them use our hospitals"—which their resolution says the defendants have built up, although they are private concerns.

"As a result of their efforts, approximately 12,000 retailers throughout the country have signed agreements to 'cooperate' "—

I ask if that has a familiar ring. In getting the hospitals to cooperate, formal resolutions were passed in this case designed for that very objective

"with the Guild's boycott program, but more than half of these signed the agreements only because constrained by threats that Guild members would not sell to retailers who failed to yield to their demands"—

Oh, how similar to the overwhelming evidence here! What does the court do with that sort of situation, which is a plain, ordinary selfish boycott? We don't like you. We don't like your business methods. Your competition hurts us. We will therefore take a sanctimonious Better Than Thou attitude and brand you as unethical, and we will employ this agency to discipline our members to boycott you, and we won't deal with you or sell, assist, or lend our countenance in any way to anybody who does deal with you.

This is what the court says about that

"Not only does the plan in the respects above discussed thus conflict with the principles of the Clayton Act; the findings of the Commission bring petitioners' combination in its entirety well within the inhibition of the policies declared by the Sherman Act itself. Section 1 of that Act makes illegal every contract, combination or conspiracy in restraint of trade or commerce among the several states; Section 2 makes illegal every combination or conspiracy which monopolizes or attempts to monopolize any part of that trade or commerce. Under the Sherman Act 'competition not combination, should be the law of trade,'"

Citing the *National Cotton Oil Case*—

"And among the many respects in which the Guild's plan runs contrary to the policy of the Sherman Act are these: it narrows the outlets to which garment and textile manufacturers can sell and the sources from which retailers can buy"—

Citing the *Montague case* and the *Standard Sanitary Manufacturing Company case*—

"subjects all retailers and manufacturers who decline to comply with the Guild's program to an organized boycott"—

What does the court cite? The very thing that Judge Groner cited in upholding the indictment in this case—the *Eastern States Retail Lumber Dealers' Association* against the United States, the famous *White List case*—

"takes away the freedom of action of members by requiring each to reveal to the Guild the intimate details of their individual affairs"—

Citing the case of the *United States versus American Linseed Oil Company*—

"and has both as its necessary tendency and as its purpose and effect the direct suppression of competition from the sale of unregistered textiles and copied designs. In addition to all this, the combination is in reality an extra-governmental agency, which prescribes rules for the regulation and restraint of interstate commerce, and provides extra-judicial tribunals for determination and punishment of violations,"—

Such tribunals, if you please, presided over by private individuals, like the defendant E. Hiram Reede, and a private tribunal known as the *Judicial Council*, a private corporation of A. M. A. which passes on a man's right to live and move and have his being and make a living and pursue his calling— "for determination and punishment of violations, and thus 'trenches upon the power of the national legislature and violates the statute.'"

How close that is to the issues in this case. That is all they were doing—punishing infractions of their rules. And this is the position of the Government in this case and it always has been

"Nor is it determinative in considering the policy of the Sherman Act that petitioners may not yet have achieved a complete monopoly. For 'it is sufficient if it really tends to that end and to deprive the public of the advantages which flow from free competition.'"

Citing a host of cases—

"But petitioners further argue that their boycott and restraint of interstate trade is not within the ban of the policies of the Sherman and Clayton Acts because 'the practices of FOGA were reasonable and necessary to protect the manufacturer, laborer, retailer and consumer against the devastating evils growing from the pirating of original designs and had in fact benefited all four.' The Commission declined to hear much of the evidence that petitioners desired to offer on this subject. As we have pointed out, however, the aim of petitioners' combination was the intentional destruction of one type of manufacture and sale which competed with Guild members. The purpose and object of this combination, its potential power, its tendency to monopoly, the coercion it could and did practice upon a rival method of competition, all brought it within the

policy of the prohibition declared by the Sherman and Clayton acts. For this reason, the principles announced in *Appalachian Coals, Inc., v. United States* . . . have no application here."

Just apply that language to our case—

"the aim of petitioners' combination"—

And they wrote it themselves over and over again—

"its potential power"—

Can anybody doubt it?

"its tendency to monopoly, the coercion it could and did practice upon a rival method of competition"—

It did what?

"brought it within the policy of the prohibition declared by the Sherman and Clayton Acts."

"Under these circumstances it was not error to refuse to hear evidence, for the reasonableness of the methods pursued by the combination to accomplish its unlawful object is no more material than would be the reasonableness of the prices fixed by unlawful combination."

Once you have that type of boycott described there—and that description is on all fours with the type that we have here, or, if anything, ours is worse—then it is not error to refuse to hear evidence on any claim of reasonableness of their motives or methods, and it is

"no more material than would be the reasonableness of the prices fixed by unlawful combination."

And the court cites the Trenton Potteries Company case and the Socony-Vacuum Oil Company case in support of that proposition.

Here is an interesting feature, too:

"Nor can the unlawful combination be justified upon the argument that systematic copying of dress designs is itself tortious, or should now be declared so by us."

Here was this absolutely groundless claim that Group Health Association was illegal and was violating Federal statutes.

"In the first place, whether or not given conduct is tortious is a question of state law. . . . In the second place, even if copying were an acknowledged tort under the law of every state, that situation would not justify petitioners in combining together to regulate and restrain interstate commerce in violation of Federal law."

If we are going to cite recent cases, it seems to me that is the case that applies to ours, and it bears out exactly the holding, as I understand it, of the Court of Appeals in this case. The Court of Appeals said that the indictment as drawn makes out, in and of itself, a violation of the Sherman law. If the facts establish that, then the defendants may be convicted. That is the only issue here—whether there is sufficient evidence to justify this jury in saying that the boycott described in the indictment was carried out as planned. That is the only issue.

I cannot believe for one moment that it would help the court for me to discuss the evidence against all the defendants in this case. If I do that it is going to take me days. I cannot believe that your Honor can have any doubts about the *prima facie* evidence against many of the defendants.

Under the evidence before your Honor the boycott described in the indictment was planned and put into effect by somebody; and it must be too clear for argument that it was certainly done by the District Medical Society and the American Medical Association and the rest of the ringleaders, because it must be axiomatic that corporations like the American Medical Association and the District Medical Society cannot perform acts of this kind without the intervention of a human agency. The grand jury has pointed out the ringleaders, the individuals that carried out this boycott for the corporations. So perhaps I ought to dwell on those defendants upon whom Mr. Leahy dwelt.

I will discuss, for instance, as an example, the evidence against Dr. Leland. It is an awfully easy job assigned to me, because Mr. Leahy has laid himself wide open. Without a shadow of justification he says that the only evidence in this case against Leland is composed of letters not written by him, but by some subordinates, and relating to the background of the conspiracy. I propose to demonstrate that that statement is completely inaccurate from the beginning to the end.

But before I embark on that rather agreeable task, let me call your Honor's attention to a little more law, and that law involves these principles:

All members of an illegal conspiracy do not have to know everything about the conspiracy or everything that everybody else has done in the conspiracy. That is also Hornbook law. It is enough if, knowing the general common design, he adds his little bit toward its accomplishment. If he put his brick

in the wall he does not have to know the extent of the wall; he does not have to know the extent of the activities of the others or even the names of the others.

Says the Court of Appeals of the Third Circuit:

"Common design is the essence of conspiracy. A crime may be committed whether or not the parties comprehend its entire scope, whether they act separately or together by the same or different means, known or unknown to some of them, but ever leading to the same unlawful result."

Citing cases—

"All conspirators need not be acquainted with one another, nor need they have originally conceived or participated in the conception of the conspiracy. Those who come in later and cooperate in the common effort to obtain the unlawful results become parties thereto and assume responsibility for all done before."

Citing cases—

"Nor does the mere fact that the conspirators individually or in groups perform different tasks to a common end split up the conspiracy into several different conspiracies."

And of course the cases are legion that bear out these principles. And with those principles in mind let us turn to the part which was performed by Dr. Leland and which the evidence shows was performed by him.

First, let me deal with the subject of background. Those allegations of background alleged in the indictment were not put in there for ornament, and the Court of Appeals, in passing upon the indictment, did not take them as ornament. The Court of Appeals commented upon that background and said that those allegations were relevant to the statement of the crime; that they had something to do with the statement of the crime, and that it is only in the light of those facts that you can clearly understand the significance of the later acts.

And so I differ from my friend when he says that the background has nothing to do with the case. The law is against him on that. The background is asserted and is relevant in this case, because it shows the common design, the plan which the American Medical Association was carrying out for years against competition of this kind with a fee-for-service object; and their later activities in the District of Columbia are simply a later step in that complete master design. When they pushed that master design into the District of Columbia then the Federal law fell upon them.

The indictment alleges as a part of this plan and design the power whereby the defendants were able to exercise their will upon their victims here:

"Defendant American Medical Association maintains a bureau known as the Bureau of Medical Economics, which concerns itself with the economic organization of the practice of medicine. The said Bureau of Medical Economics has taken a leading part in carrying out defendant American Medical Association's policy of opposing, discouraging, and suppressing Group medical practice on a risk-sharing prepayment basis."

The evidence shows that the head of that organization which was taking this leading part in the master plan, was a doctor of medicine—yes, a doctor of medicine, and also a doctor of economics, not practicing medicine but practicing birth control—not with human beings but with economic ideas. And this Bureau of Medical Economics was really a birth-control clinic for experimentation and for freedom of thought; and this background evidence which is in the case shows that this doctor-economist had been busily engaged for years in active suppression and opposition against plans of this character. He had been damning the Ross-Loos Clinic and the Trinity Hospital and four or five or six other instances of this kind of practice up and down the land. And, just as typical of what that background evidence against him is, when the Cincinnati, Ohio, Medical Society writes and tells him that a Dr. Cook has gone out to the Ross-Loos Clinic and has become interested in this way of rendering medical service and plans to do the same thing in Ohio and, further, that this group that belonged to the local society had banded together and passed repressive resolutions against him, to the effect—

"Does practice under a prepayment group plan, such as is being here proposed and which does not include all of the local qualified physicians of the community, but restricts itself to a small group, constitute a violation of Article 6, Section 2, of the Principles of Ethics of the American Medical Association?"

"Shall membership in the Academy of Medicine of Cincinnati be withheld from physicians who are practicing in violation of this rule?"

He was going to kick them out, just like Lee and Scandifio.

"Shall violation of this rule by a member of the Academy constitute sufficient reason for termination of his membership?"

There it is again. They were going to have another one of the trials, and they passed these repressive resolutions and sent them to Leland for his information and advice—because they

all go back to this Alma Mater, this American Medical Association, because they are afraid of it and because they are willing to use its power, and so they dutifully write in reporting their restrictive practices.

I say that is typical of this background evidence which the Court of Appeals said was relevant upon the issue of whether or not these defendants violated the law.

Now, let us come to the District of Columbia Society and refute right from the documents that are in evidence this claim of Mr. Leahy that there is nothing in the evidence with reference to that.

I wish I had jotted down what he said. He said something to this effect, that the only evidence in the record with regard to Leland is this background material, and not a bit of it had to do with the District of Columbia. I believe at one time, in the heat of his excitement, he said:

"There is no evidence that the defendant Leland knew about the District Medical Society, even."

Well, let us see. Here is Mr. Leahy's statement:

"Every letter relating to Leland relates to the background of the conspiracy. There is nothing against him except answers that were written in the background, and he did not even write them. He does not know, from this record, that there was a District Medical Society. He, just on this record, did not even know of it."

That is the claim that is put forth in seriousness before your Honor by Mr. Leahy.

Let us see what he did in the District of Columbia to carry out this policy that he has been carrying out throughout the United States.

Major General Ireland, your Honor may remember, learned about Group Health and about its perfectly innocent attempt to get a good medical director, Colonel Jones, and General Ireland took upon himself to write to the defendant Cutter and gave him that information and gave him Ireland's impressions of what Jones had said, although Jones denied it. He said that Jones got the impression that this was an entering wedge to socialized medicine, and that he was dropping it like a hot cake. He said,

"Just treat this information as if it blew in your window, as I do not want to be the person to embarrass the Surgeon General if there should be any embarrassment. Some of the prominent doctors in Washington are going to be wised up. It has just come to my knowledge and I am going to drop it on your desk."

That letter goes not only to Cutter, but as result of it he began his enforcing of the Mundt Resolution against five of the hospitals. But it shows on its face that it goes to Dr. Leland. And I don't know where you could find more fertile ground for that seed to rest than in that birth-control clinic of prepayment plans. They think so much of it and it is so important to them, that bit of information, that copies are made of it and we have a separate copy in the evidence that comes from the Leland file, made for him, and it has his name at the top.

Then the American Medical Association gets exercised about it and they have formal proceedings with regard to it, and in their proceedings we find this:

"The following paragraph of a communication which Dr. West received from a physician in Washington was read"—

And they quote it.

"The Group Health service affair of the Home Owners Loan Corporation has already been incorporated and our Executive Committee had a meeting with some of their representatives last night and it certainly looks bad. It was brought out that it was possible for them to borrow money from the Home Owners Loan Corporation when and if necessary at any time for purposes in regard to the health problem. It was also brought out that there are 200 branches scattered throughout the United States," and so forth.

"Just what is going to come out of the whole affair it is impossible to predict at this time, but there are going to be some conferences in an attempt to go along with this outfit if it is possible to do so to save our faces."

Mr. Leahy:—You do not mean to tell the court that that is an A. M. A. document?

Mr. Lewin:—I do indeed.

Mr. Leahy:—You know that was not written by the A. M. A.

Mr. Lewin:—Just wait a minute. I am going to tell the court who wrote. It was written by Dr. Herbst to Dr. West and was put by West before the Board of Trustees of the A. M. A. and copied into their minutes. I don't get funny with this evidence, my friend. I don't misstate evidence. I have never been guilty of it, to my knowledge.

Mr. Leahy:—Just tell the court who wrote it.

Mr. Lewin:—I am going to tell the court plenty about it:

"Dr. Woodward reported information secured from a Washington physician over the telephone and by letter concerning this matter, and there was considerable discussion as to what the action of the A. M. A. should be. . . . After the discussion the following action was taken:

"Dr. Bloss moved that the Editor"—

That is the defendant Fishbein—

"and the Secretary and General Manager"—

Here is a doctor-editor and a doctor-general manager—

"be authorized to proceed to inform the profession of the country as to the efforts of the H. O. L. C. to enter into the practice of medicine and as to the present status of the proposal to organize cooperatives by the Government."

I will come back to that again, because there is the germ from which came Dr. Woodward's, Dr. West's and Dr. Fishbein's A. M. A. articles which Mr. Leahy says in his argument started everything.

"It was moved, and the motion was seconded by Dr. Bloss and carried, that Drs. Woodward and Leland be requested to go to Washington to see what they can learn and to try to advise the Medical Society of the District of Columbia, if that Society is willing to accept advice."

Oh, no! Leland had nothing to do with the District Medical Society! He knew nothing about it.

Here is a formal resolution of the Board of Trustees authorizing him to go to Washington to advise with the District Medical Society about this particular matter, the matter being outlined in the Herbst letter to the Board of Trustees, which has just been read. Now, what happened? Did he go to Washington pursuant to that authorization? Indeed he did. He came to Washington on several occasions in connection with this matter, as the evidence shows.

"I had a long conference with a committee of the Medical Society of the District of Columbia about the cooperative movement being promoted by groups of Government employees."

This is not the meeting in November where Hooe and McGovern were together at that time. This is another one. This is as early as July 14:

"The District Society is apparently very much agitated about the matter, but, as a matter of fact, there was very little that I could offer them in the way of suggestions as to what they might or should do. In accordance with authorization given by the Board of Trustees I have asked Dr. Woodward and Dr. Leland to go"—

Where?

"to Washington"—

What for?

"for the purpose of conferring with the Medical Society of the District of Columbia, and they are to have a conference with the official representatives of the Society in Washington."

And later I will come to his statement which he made time and time again to the headquarters staff—which means the Doctor-Editor and Doctor-Manager, the Doctor-Lawyer, the Doctor-Economist and the Doctor-Policeman. The headquarters staff had done everything in their power to oppose and combat this organization.

All right. We have got him authorized to go and we have got the Doctor-Manager to go. Did he go? Here is a telegram from the Doctor-Lawyer dated July 13, 1937:

"Leland and I arrived Capitol Limited Wednesday Stop Leave it to your judgment to arrange a conference at which all essential persons will be present Stop It will apparently be necessary for the Society to employ counsel to guide it and presence of that counsel at conference is essential Stop If regular counsel is not available his representative or other counsel should be present Stop Please arrange so that we can leave Washington not later than Thursday afternoon July fifteen Stop Time of conference immaterial to us We shall be at the Mayflower."

That is signed by the defendant Woodward.

That was July 13, 1937. On July 14, 1937 Woodward and Leland were here pursuant to that authority and in conference with the rest of the confederates with regard to suppressing Group Health. How do we know that? This same Dr. Leland who, his counsel tells you in all sincerity, I hope, did not even know there was a District Medical Society, had already received, June 5, 1937, this communication from Dr. Conklin—and will you keep in mind that with this communication he received that mimeographed confidential prospectus. Dr. Conklin wrote him as follows:

"I am enclosing herewith a plan that has recently come to our attention for development of prepayment medical service in Governmental bureaus. The potentialities of such a plan, if and when it is put in force in the capital city, should be readily understood."

"With hopes that I will have the pleasant opportunity of seeing you during the coming week, I am,

"Sincerely yours,
C. B. Conklin, M.D., Secretary."

He has gotten his plan. It was read to the jury—this "entering wedge to socialized medicine," as they called it. He has gotten authority to come down and see what he can do. He is a man that has been able to do wonders in these other cases. That is his job, and we know he came. What transpired at that meeting? It was not at the District Medical Society; it was at some club, I think. The committee that had charge of this particular job met at the Metropolitan Club, I think. I am not sure of that. But here is an A. M. A. representative stationed in Washington whom we find reporting religiously through the summer to Dr. Woodward in an effort to give him ammunition that he can use in writing this attack in the October 2 issue of THE JOURNAL—John F. Hayes. He writes and says:

"I attended the special meeting of the District Medical Society on the night of July 29. This special meeting was called for the purpose of hearing the report of the special subcommittee appointed to secure facts and information regarding the Group Health Association, Inc. . . .

"Dr. Sprigg read a formal and somewhat lifeless report reviewing the facts and information which had been obtained regarding the Group Health Association, Inc. Nearly all of his facts were substantially the facts which you and Dr. Leland had supplied to the group which attended the meeting here about two weeks ago."

I am not going to bore the court by reading the minutes of the July 29 meeting and showing you that long report which Sprigg's subcommittee had prepared and which Sprigg offered then; but there is testimony that nothing was in that report that Woodward and Leland had not supplied them with. So you may very well say that Leland was the author of it.

Does it simply rest on hearsay evidence that Dr. Leland was here? Oh, no. The meeting is heralded by Dr. Conklin. He tells his anxious confrères that help is coming from the mother—Woodward and Leland are arriving on July 12 to assist them. And then on July 27 he says what they propose. Woodward had a suggestion that quo warranto proceedings might be brought. They snatched at anything to gain their end. They were not satisfied to leave the enforcement of the law in the hands of law-enforcement agencies, but they were going to institute and did initiate this whole abortive attempt which they call of questionable legality—questioned by themselves for their own ends, stimulated by them.

But what does Leland suggest? Leland suggests another means. And I call your Honor's attention again to the indictment. Your Honor knows those cases which the Court of Appeals cited showing that the means need not be alleged at all. The indictment alleges certain specific means and also other means; and another means which is perfectly clear from this evidence was a belated attempt to urge competition with Group Health Association.

I wish I could take the time to trace that for you. But, oh, it is lurid!

First, there are contentions on the part of the defendant that it has been their fault, that the low-income group has not been properly take care of; that they have been backward. You remember the exhortation for them to wake up or otherwise they would get this socialized medicine that they feared so much, if they insisted on practicing repressive tactics.

And so, after Group Health Association had shown them the way—this horrible, unethical thing, as they would have you believe—they themselves decided to run in competition with it and combat it in that way. They use those very words. A number of them said the best way to combat it would be to set up another rival organization and enter into competition against it.

In April of 1938 they had a committee headed by Dr. Riddick to formulate a group prepayment plan just like Group Health, except it was the Medical Society's. Awfully unethical for anybody else to do it, but all right for us. Well, Dr. Leland is the man that gave them that assistance.

THE COURT:—That is what you advocate—competition, isn't it?

Mr. Lewin:—Free competition, but not the kind of competition this was.

Mr. Leahy:—Where is the evidence that Dr. Leland did that?

Mr. Lewin:—Here it is. Give me the minutes of July 27. He had a very amusing little plan.

THE COURT:—I am more interested in hearing you on the evidence against the individual defendants.

Mr. Lewin:—Yes, I am working now on Dr. Leland.

THE COURT:—So far as the law is concerned the law is laid down for me by the Court of Appeals, and there is no purpose in reading that.

Mr. Lewin:—I am not going to read law; I am going into the evidence concerning Dr. Leland. Here is what the minutes of the July 27 special meeting as reported by Dr. Conklin show to have occurred:

"The Secretary"—that was Dr. Conklin—"explained just what had been suggested by Doctors Woodward and Leland at the time of their visit." That was the July 14 visit, when they came to see what could be done with G. H. A.

"Dr. Woodward would advise quo warranto proceedings." "Dr. Leland had given a sketchy verbal outline of a plan whereby a pool of money could be created, and from this pool the care of the sick could be financed."

Well, the boys snatched at that; that sounded good, and so Conklin wrote out to get more details about it. First of all, I ought to tell you that Dr. West thought that was a good idea. He discussed a cooperative plan at the Metropolitan Club, and then went back and reneged on it. Maybe it wasn't wise for them to start anything in the nation's Capital; it might do some good.

Mr. Richardson:—Is that what he said? Are you making this up?

Mr. Lewin:—I am characterizing it. I am telling you what Leland did.

August 18, this man Leland writes back to Conklin:

"Dear Mr. Conklin:

"Since your letter arrived just as I was leaving the office for my vacation, I have had no opportunity to answer it until today.

"The suggestion which I made at the committee meeting"

Now, here is Leland's statement of what he said when he was here:

"is, in my opinion, a very simple one, involving nothing but cash payments to those who wish to participate. It is based largely on the type of arrangement that has been in effect for many years and operated by health and accident insurance companies."

Of course it was horrible for the G. H. A. to do that; a terrible thing for them to do, but it was all right for the A. M. A. and was suggested by this very man Dr. Leland.

"Briefly the plan would be for any group who desired to spread the cost of medical care to organize a benefit association or a mutual insurance company. The dues or premiums per member would depend on the amount of benefits to be provided. Benefits would be paid in cash to the beneficiary. They should be limited to \$250 or \$400 or \$500 in any one year, but the benefit for any one illness should not exceed 75 to 80 per cent of the total amount of the medical and hospital bills for that illness.

"There would be no medical panel; every member would have the right to choose any physician in the District of Columbia or anywhere else in the United States; there would be no designation of approved hospitals; the patient would be perfectly free to choose his own hospital or go to the hospital to which his physician ordinarily takes his patients. Patients in hospitals would submit their bills to the organization according to the regular schedule of charges.

"The sole function of the organization would be to collect the dues or premiums from the members and to pay in cash to the members the amount of claims for medical or hospital services incurred for any single illness. Physicians and hospitals would then take their chances on collecting from the patients the amounts paid them for claims. There should be some sort of an identification card to indicate that the patient is a member of the organization. This would serve only to apprise the physician or the hospital that the patient would be reimbursed up to 75 or 80 per cent for the services rendered."

Here is the profession that is above all question of finance. "Physicians would then take their chances on collecting from the patient the amount paid them for claims. There should be some sort of an identification card" and,

"If the District Medical Society chose, it might authorize a 10 or 15 per cent reduction from the regular fees for members of such an organization, providing such an organization would be willing to make a settlement with the patient and physician or hospital jointly."

That doesn't sound anything like "finances" and "trade," does it?

"This is being done in some places and apparently works entirely satisfactory. In Iowa, for example, the reimbursement to members for the cost of hospitalization is made by check payable jointly to the member and the hospital. This affords an opportunity for the hospital to collect, since the member cannot cash the check without the signature of the hospital.

"If there are any further details in connection with this which you desire, I shall be glad to do my best to clarify such points as may not be entirely clear."

And that was signed by Leland, and he sent a copy to this same gentleman, Dr. Woodward, who came down with him.

All right now, on July 16 this same Woodward, this same Leland joined with Woodward in presenting a report to Dr.

West. On what subject? "Group Health, Inc., an apparent affiliate of the Home Owners Loan Corporation."

There it is in the evidence. Isn't there any evidence in the record that he knew anything about the situation?

THE COURT:—You don't need to read that.

Mr. Lewin:—I am not going to read it; I will see if there is anything else.

Mr. Kelleher (to Mr. Lewin):—Read the conclusion.

Mr. Lewin:—I will read you the last sentence:

"It (Group Health) is obnoxious to public policy for obvious reasons."

Who determines public opinion? Will you define it, and tell us what you mean by public opinion?

"We," says the American Medical Association, "simply reserve that indefinite standard for our own use, so we can turn it on any outfit we wish, without giving any explanation for it."

Your Honor well knows that if there had been a tribunal set up by law delegated with any such rule-making power as to brand organizations as contrary to public policy the whole statute would be unconstitutional, because lacking in limitation upon the delegation of power. I am not going to cover that.

Here is the conference Mr. Leahy talked about. I don't believe he talked for it, but Leland was right there. Here it is, Nov. 6, 1937, affirmative proof that he and Dr. Woodward and Dr. West sat there with Drs. Hooe and McGovern. Why were they sitting there? Hooe started off by reading something that indicated why they were there. He read the standing resolution which seems so innocent to my friend. This was it. The Medical Society of the District of Columbia, at its regular meeting held Nov. 3, 1937 adopted the following resolution:

"That the President of the Medical Society of the District of Columbia appoint a committee of two members to go to Chicago as promptly as practicable to lay before the proper officials of the American Medical Association the views of this Society with regard to the activities of Group Health Association, including:

"1. That inasmuch as the movement threatens to be nationwide in its scope, and affects every component organization of the American Medical Association, it is the duty of the American Medical Association to oppose immediately with all its might this entering and possibly illegal wedge to the socialization of medicine.

"2. That in view of the tremendous import of the Group Health Association movement to the membership of the Medical Society of the District of Columbia, and also the profession at large and to the public, it is the opinion of the Medical Society of the District of Columbia that it is the duty of the American Medical Association to combat vigorously Group Health Association, Incorporated.

"3. That the Medical Society of the District of Columbia waives any question of regional interference by the American Medical Association.

"4. That the American Medical Association give a definite and immediate expression of its intended action in this matter."

Mr. Lewin:—That was the resolution passed by the Society which was submitted by Dr. Stanton.

Now, there follows the transcript of the plottings that occurred at that meeting; and again it is my pleasure to correct my brother when he says that all that came out of that was some advice to get legal counsel. The doctors who left the District of Columbia to go out there for advice and assistance laid their cards on the table. They even went so far as to tell Leland and the others about these hospital boycotts. That was at the Sunday night meeting, it must have been October 31. They all met together and decided to put pressure on the hospital staffs. They wanted to know whether that was risky. One spoke up and said, "That is reasonable. Will the hospitals do it?" Woodward said it might invite some Congressional action if they did that. The propriety of doing the thing was not questioned by them; the question was whether the hospitals would do it. I just point that out as showing there was a thoroughgoing discussion of the whole issue; of the plottings right there in the presence of Dr. Leland.

Mr. Leahy:—Now, you know that is a misreading of the evidence.

Mr. Lewin:—No, it is not. You can't talk to me that way, because I have it right here.

Mr. Leahy:—I can talk to you that way and tell you that it is not that way.

Mr. Lewin:—I will not be challenged and not make good on it. Give me the part about the Lee and Scandifio expulsion proceedings gone into at that meeting.

THE COURT:—Pass on to something else.

Mr. Lewin:—Is your Honor satisfied with my statement? Here it is:

"The operation of Group Health Association began on Monday last. Two members who contracted with Group Health were members of the District Medical Society. The third had sent in his application which had been withdrawn within the past ten days. There was nothing to be done about this third member at the present time."

That was Dr. Hulburt.

"The resignations of the other two were received by the Medical Society of the District of Columbia within the week. A letter was sent to each of them asking him to appear before the Compensation, Contract and Industrial Medicine Committee. They did not appear but the Committee received a communication from one of them. The Committee unanimously recommended to the Executive Committee of the Medical Society of the District of Columbia that disciplinary measures be taken.

"Dr. Woodward raised the question as to whether the notice to these members had told them of the charges that were to be preferred against them and stressed the necessity for following strictly the procedure as laid down in the constitution and by-laws of the Medical Society of the District of Columbia. Further discussion was deferred to a time when it could be gone into in detail by Dr. Woodward.

"Dr. Hooe: In the matter of the H. O. L. C., what is your future program?

"Dr. West: It is just exactly the same as it has been all the time. We shall continue fighting it in every way we can. We are going to get all the help we can get. We are at least going to keep on until we are instructed otherwise."

Mr. Lewin:—Then here is what Dr. Hooe says:

"Dr. Hooe: Executive Committee recommended that a letter be addressed to the Medical Boards of the various affiliated hospitals in Washington, calling attention to the H. O. L. C. health group, insisting that the hospitals take cognizance of it, and, among other things, calling attention to the fact that the physicians employed by such group are not acceptable to the Medical Society of the District of Columbia.

"In reply to Dr. McGovern's question as to how far the Medical Society of the District of Columbia might go in controlling the hospitals, Dr. West expressed some doubt that the Society can effect such control."

There weren't any plottings at all there.

Taking up Dr. West's expressed doubts as to whether the Society could control the hospitals, Dr. Hooe asked:

"Is it not, in your opinion, most reasonable that the hospitals should acquiesce in this matter?

"Dr. West: It is reasonable that they should do it but as to whether or not they will, that's another question. Suppose they don't?"

and then there is more of the same sort of thing. A complete exposé of what was going on there in the presence of Leland.

Now, there were a few other documents in regard to Leland. One, Woodward writes to Conklin August 18, copy to Leland. He says:

"Dear Dr. Conklin:

"I thank you for your letter of August 14, stating the present position of the Medical Society of the District of Columbia with reference to the Group Health Association.

"I understand from your letter that everything that was said and done by Dr. Leland and me in the course of our recent conference with the Committee then having the Group Health Association under consideration is now before the Committee duly appointed to study the matter. If there is anything in what either of us said or did that was obscure and that calls for explanation or elaboration, we shall be glad to undertake to explain or elaborate it for the information and guidance of the Committee. Neither of us has at the present time any further proposal looking toward forestalling the growth of the Group Health Association or toward preventing the organization and growth or similar groups in the District of Columbia."

Now, what is the upshot of all this? I can't go along all day on one defendant. What is the upshot of it? It means perhaps that Leland did not suggest the blood-curdling things as did some of the others. It might be that a jury in its exercise of discretion might feel they would wish to relieve him, but certainly can anybody seriously argue, in the light of all that contemporaneous, documentary evidence that Leland did not know about this plan; that he did not confer with the rest of the conspirators, and that he did not hear and make suggestions with regard to it? It is just impossible for any serious, bona fide argument to be made, and so I say to your Honor, your task with regard to Leland is simple.

Now, a word in regard to Fishbein; and I wish I could take more time on this. The testimony with regard to Fishbein rests so largely on that A. M. A. article. You will recall when the Board of Trustees, when they authorized Woodward and Leland to come here to Washington to advise, authorized West and Fishbein to make this announcement to the public, or the profession generally; that was it, the profession generally with regard to H. O. L. C. Now, what happened? The way they had to bring this out to the profession generally was through THE JOURNAL, and who, if you please, was the editor of THE JOURNAL, and responsible for every line that went into THE JOURNAL. The defendant Fishbein.

Now the evidence shows that it is perfectly clear he passed himself upon that specific issue. The same Dr. Woodward was assigned the task of writing up the draft of the article, and he wrote up that draft and then the evidence shows he sent that

draft to the defendants West and Fishbein with a written communication in which he called their attention to the fact that they had been authorized to do such a thing, and here it was.

Now then, my friend Mr. Leahy, who accuses me of misstating the evidence, tells you there isn't a line as to Dr. Fishbein. There is a letter back from Dr. Fishbein. This is what Dr. Woodward sent to the Board of Trustees of the A. M. A.:

"At the meeting of the Executive Committee of the Board of Trustees of the American Medical Association, June 29, 1937, a resolution was adopted authorizing the editor and the secretary and general manager to inform the medical profession of the country as to the ethics of the Home Owners Loan Corporation to enter upon the practice of medicine and as to the present status of the proposal to organize cooperatives by the Government. In response to your request for information concerning the matter, I submit the following report."

And it is signed by Dr. Woodward. The memorandum is for "Dr. West and Dr. Fishbein." It says:

"To avoid possible conflict on my part with the attached canons of professional ethics of the American Bar Association, I am submitting the accompanying material to you in the form of a report."

That is Dr. Woodward; he is lawyer and doctor.

"If you decide to publish it, I hope that my letter will be published along with it so as to make my status clear. If you think the letter should be addressed to you or either of you, change can be made accordingly."

"The minutes of the meeting of the Executive Committee, June 29, 1937, show the adoption of the following resolution:"

Now I will give you the reply:

"I am returning herewith the duplicate of the report on the H. O. L. C.; the original is being edited for use in the Organization Section of THE JOURNAL.
"Morris Fishbein."

That is in evidence.

Woodward had already written that Fishbein didn't believe he could run the article at a certain time but expected to run it at another time. How did the article come out, and what did it do? Mr. Leahy says after the article everything started. Everything started after the Woodward article, so he says, and although it is not strictly accurate, the fact is that after the article appeared the defendants really did get down to business. Why? Because these minutes will show that up to that time while there had been a great deal of plotting, in the words of Conklin some people suggesting boycott, there had also not been complete unanimity of view in the District Medical Society. Some of the more liberal members seemed to think that it was incumbent on the District Medical Society to go along if they could save their faces by doing so with Group Health, or develop some kind of a prepayment plan, recognizing the crying need for it. So, in the late summer, the McAtee committee brought in what Dr. McGovern characterized as a rather weak report, in which he wanted the Society to go on record as being in favor of some kind of a prepayment plan, and when he brought that in he called attention to the fact that in a little while there would be an article in THE JOURNAL OF THE AMERICAN MEDICAL ASSOCIATION which they should read for their "guidance and advice," I think the phrase is. Notwithstanding that article, he thought this more liberal report might be passed. Then the article came down and that swung the Society against any liberal view; against any expression in favor of a prepayment plan, and over to the strictest kind of opposition and boycott of Group Health, and everything it stood for. And Dr. Groover, who is now dead, was the gentleman who offered that substitute resolution, which your Honor may recall. He is commended for it by the rest of the defendants, a number of them. He said, "This is the kind of fighting resolution that we ought to have brought in in the first place." And I think Dr. Sprigg excused the Committee that brought in such a weak report, although he praised Dr. Groover's substitute, by saying "We didn't have the benefit of this article from the American Medical Association when we were deliberating." I am going to quote from memory here, and I won't be accurate, but there were recitals in the Groover substitute which turned its back on any liberalizing. There were recitals there with regard to this A. M. A. article; that the District Medical Society was on record in favor of what was said there, expressed in that article, and the implications to be drawn therefrom.

Now, you might not have drawn those implications, if you had read those articles in a publication, and I might not, but when you consider the circumstances under which they were written and published by the American Medical Association, and when you consider the interpretation intended to be placed

on it by the District Medical Society, you will see how very important that article became and was; because that article, after a long rambling description of Group Health, most of it based on very inaccurate information and a lot of theorizing about the law, which turned out to be utterly groundless, turns to the implication. These are the sentences which certainly must be the ones that carry the implication. This article, written for a purpose and used for a purpose, not as a statement of fact; not the same kind of freedom of speech they wanted to deny poor Dr. Richard Cabot, who happened to make an address here at the Group Health banquet and then was called on the carpet by the American Medical Association and referred to his local society for disciplinary action; not that kind of freedom of speech that they wanted to report there—no, but dynamic freedom of speech: That was the instrumentality for the accomplishment of the design, and that instrumentality was adopted and published by the defendant Fishbein in the Organization Section of the publication. But before I get to that, let me tell you another interesting thing. Some way they thought that, if they could discover that the Filene Foundation had contributed moneys to Group Health, they would have a very weak point. Why, I have never been able to understand. As a matter of fact, the Filene Foundation had not been contributing anything to it, except advice; but, nevertheless, suppose it had contributed a very substantial sum of money. I have always failed to follow or understand their reasoning in this connection. Assume the Foundation took the position that these people were sincere but that perhaps because they didn't have sufficient financial standing they weren't "economically sound" but that it wasn't just a bubble, and that they did advance some financial assistance. Well anyway, these people didn't know; they thought it might be a weapon if they found out, so they adopted this surreptitious way to make the discovery. Instead of writing to the Foundation, Dr. Fishbein suggested that Dr. Woodward get some third party, not identified with the A. M. A., to write a letter to the Filene Foundation and make this inquiry. Now, mind you, they are getting ammunition for this article, which I am going into in a moment; and here is this clever idea of smoking out what they said would be this dangerous fact, and they go so far as to suggest the type of letter that this third party should write; this third party who is not to disclose his interest or identity, is to write.

Mr. Leahy:—Is that in evidence?

Mr. Levin:—It is in evidence. Exhibit 185.

THE COURT:—Let us go on. This case must proceed tomorrow.

Mr. Levin:—I have not been talking an hour and a half.

THE COURT:—I heard Mr. Leahy for an hour and forty minutes; I am going to hear you for a couple of hours.

Mr. Levin:—In answer to the suggestion that Dr. Fishbein didn't suggest this surreptitious letter—here it is in Exhibit 185—we say here is the article, and the implications to be drawn from the article:

"As the members of the salaried staff of the Association are likely to be looked on by the profession generally in the community as on the outer verge of ethical practice, if not altogether beyond the pale, it is not clear how they are to obtain qualified consultants or procure hospital service for their patients."

This salaried staff is to be looked on as beyond the pale, although the salaried staff of the A. M. A. can plot against them. There is the implication; withdraw consultation, and keep them out of the hospitals, and it is repeated.

"In any event, medical service under the Association would be likely to be handicapped by difficulties likely to be experienced in obtaining the best consultant service and hospital accommodations. Physicians who sell their services to an organization like Group Health Association for resale to patients are certain to lose professional status."

Now there is the act; you have the boycott. That is the boycott that is charged; the boycott which the proof shows was carried out.

Now, this dynamic prompting was authorized by the Board of Trustees and carried out by the defendant Woodward, West and Fishbein and taken to heart for the information and guidance of the local defendants to such an extent that they ordered 1,000 extra copies and distributed them among the entire membership for their information and guidance, and from that prompting came the attack on the so-called illegality of Group Health, and from that prompting came the consultant boycott and the exclusion from the hospitals.

Now, in view of your Honor's remark that you don't care to hear any more, or very little more—

THE COURT:—I didn't say that; I suggested I would be glad to allow you two hours. I would like to hear the evidence as to the other defendants, these individual defendants.

Mr. Lewin:—I could have made my argument much shorter if I had discarded the evidence. I thought your Honor did not wish me to do that.

Mr. Kelleher:—I propose to deal with the individuals in the local Society and the defendant, Washington Academy of Surgery, if your Honor desires to hear some discussion on the latter.

THE COURT:—I should like to hear as to the local membership.

Mr. Kelleher:—How about the Washington Academy?

THE COURT:—Yes.

Mr. Kelleher:—I will commence with it, then. The evidence shows that on January 29 and January 31, 1938, defendant Washington Academy of Surgery recommended to four hospitals, Columbia, Providence, Georgetown and Garfield, that they disapprove the application of Dr. Selders for courtesy privileges. The question presented, if your Honor please, is whether this act, obviously in furtherance of the conspiracy, was done by the defendant with the knowledge and for the purpose of doing something in aid of the conspiracy. Very briefly I shall cite four reasons, disclosed by the evidence, why your Honor must conclude that there is a prima facie case at least which requires explanation by them, or by that defendant, concerning this action.

First, the meeting of that Academy on Dec. 10, 1937, the minutes of it contain the following:

"Discussion concerning G. H. A. It was suggested that the professional qualifications of the surgeons of that organization alone be considered, as a matter of public policy. However, a motion was passed requesting the hospital privilege committee to consider the ethics of any applicant as well as his strictly surgical training; ethics were understood to be as defined by the American Medical Association."

Your Honor will note that this resolution of the Academy on December 10 was adopted at the suggestion of Group Health; second, that the resolution, the purpose of it, was to test the right of Dr. Selders to participate in any of the hospitals on the basis, not only of his professional qualifications but on the basis of his ethical qualifications; and I don't think I need go any further, so far as this evidence is concerned as to what was meant by the word "ethics," the tyranny of that word has already been referred to by Mr. Lewin. What was meant was the participation with G. H. A.

THE COURT:—What was the report of the Committee?

Mr. Kelleher:—We don't have in evidence the report of the Committee, but we have letters from Dr. Fishback to the four hospitals stating the Committee had recommended against the granting of courtesy privileges.

THE COURT:—Do the minutes show the nature of the report?

Mr. Kelleher:—They do not; they show the action of December 10th.

THE COURT:—Is there anything in the letters or reports of the hospital to indicate whether it was passed on in one way or another, or both?

Mr. Kelleher:—They give no grounds whatsoever; so we must look behind to see what the grounds were. That is the first point.

We also have in evidence a letter dated December 9, from Dr. Fishback, the Secretary of the Academy, to the Chairman of the Hospital Credentials Committee, and this is what Dr. Fishback says:

"I am anxious to talk to you." That is Exhibit 446-A.

"I am anxious to talk to you before you reach any decision on Dr. Selders, especially if there is feeling that he will be disapproved purely because of his connection here in Washington. As a matter of policy and tact, and I believe for the good of general public attitude toward the profession, the question of his relationship to the Group Health Association, Inc., should not be permitted to enter the discussion."

Bear in mind, this is December 9th, the day before the Academy rejected this suggestion of Dr. Fishback and decided to consider the matter, and let me show your Honor the circumstances indicating the mutuality of interest between the members of the Washington Academy and the members of the local Society.

In the first place, the evidence shows that every one of the forty-eight members of the Washington Academy of Surgeons was also a member of the District Medical Society. By stipulation the names of the officers and of the members of the Hospital Credentials Committee appear in evidence. Two of the members of the Academy were the defendant Christie and McGovern; two of the most active in the conspiracy. The president of the Society, Dr. John A. Cahill, was on the Executive staff of Georgetown Hospital, attended the meetings

of that Committee at which G. H. A. and Dr. Selders were discussed, and at which action against Dr. Selders was taken. He was present at the October 2nd meeting of the Society at which the resolution concerning the adoption of THE JOURNAL article and its implications was adopted. Furthermore, the members of the Advisory Committee, the Committee which was instructed to consider the ethics of the applicant, were also members who were active in the conspiracy for the Medical Society of the District of Columbia. Dr. Lyons, Chairman of the Committee, was a member of the Medical Staff of Childrens, and was present at a meeting of April 4th of that staff, at Childrens Hospital, at which a resolution was moved for adoption that Dr. Wall be instructed to arrange for a meeting of the members of the staff of the various hospitals to "adopt uniform rules concerning admission of G. H. A. patients in hospitals."

He attended the July 29, 1937 meeting of the Society, at which G. H. A. was discussed, and the Committee appointed to discuss the matter. The second member of that Credentials Committee, Dr. Barton, was a member of the Executive Committee of the District of Columbia from April 1937 to July 1938. He attended meeting after meeting of that Committee, at which all of these matters were discussed; and I have these meetings here and am prepared to discuss them, if necessary.

In addition, he was present—and let me point this out—at the October 11th meeting, November 11th meeting, at which the special hospital committee made its first report and suggested that Group Health patients be treated only by members of the staff of the hospital; and that report, your Honor will recall, was referred back because there was a little hole in it, namely, because Group Health doctors might already be members of the staffs.

The third member of this hospital credentials committee of the Academy was Dr. Fred Sanderson, and who the evidence shows was a member of the C. C. & I. N. Committee of the Society; the very Committee which preferred charges against Lee, and the evidence further shows that Sanderson, in the absence of Hooe, brought out the charges of the C. C. & I. N. against Dr. Selders.

The fourth and last member was Dr. A. L. Riddick, and he was a member of the staff of George Washington, which failed completely to take any action whatsoever upon Dr. Selders' application. He was present at the meeting of October 15 and at the meeting of November 11 of the Society, already referred to; and he was present at the meeting of March 2, at which the Executive Committee recommended that Dr. Scandiffio be expelled. These circumstances clearly show what the Academy was doing in considering the ethics of the applicant; and, secondly, that the very parties who were active in the Society and in the hospitals in the city against Group Health were sitting on these committees which passed upon the ethics of applicants. Now, finally, and this is the last point on the Washington Academy, if there could be any doubt left in your Honor's mind, this evidence will dispel it.

The motion, the motion that the Credentials Committee consider the ethics of applicants was made by none other than Dr. Warren Segar. Dr. Segar was a member of the Hospital Committee of the District Medical Society, the very Committee which was charged by that body on November 3 to carry out the hospital phase of this conspiracy. It is stipulated that Dr. Segar during the period from July 1, 1937 to July 1938 was a member of that Committee. He was present at the meeting of November 3, when the hospital resolution was adopted, and also he responded to the letter of Dr. Warfield of February 3, with which your Honor is familiar; the letter in which Warfield requested information from all members of the Committee concerning the activities of the hospitals of which members were members of the Committee, concerning the G. H. A.

Now that, your Honor, we submit clearly raises a prima facie case against the Washington Academy of Surgeons.

First, the minutes; second, the Fishback letter; third, the fact that the committee considering Selders, the officers of the Academy, were active in the Society pertaining to the case; and finally the fact that Segar, one member of the hospital committee, was the one who put this resolution motion in the Washington Academy of Surgeons.

Now, your Honor, let me come now to the same defendants to which Mr. Leahy referred this morning.

As I understand it, he urged the Court to direct a verdict for the defendants Young, Martel, Yater, Christie and Stanton.

THE COURT:—I didn't hear him mention Yater.

Mr. Kelleher:—He made this observation, your Honor. He made just a single resolution. I might as well dispose of this

thing right now. If Dr. Yater isn't in this thing, nobody is. The hospital committee was designated on November 3 to then determine and report back to the Society on means for bringing to the attention of the hospitals the attitude of the Society concerning G. H. A. And you remember that resolution and the recital that the Society has in its power to hinder and obstruct G. H. A. if it can prevent patients of that organization from gaining admission to the hospitals.

Incidentally, Mr. Leahy says the mere fact that Dr. Christie seconded that resolution doesn't mean anything, that that is not in evidence against Dr. Christie.

As a matter of fact, he did second it, and Dr. Prentiss Willson introduced it.

Now, what did Yater do?

On November—

THE COURT:—Is he on the committee?

Mr. Kelleher:—No, he is not, but I will explain his connection.

On November 11, just eight days after this committee was designated to act, Dr. Warfield reported back for the committee and this is what he said.

He said: "The committee had a meeting in my office a few days ago concerning this matter, concerning the November 3 resolution.

"It is the view of the committee that the Society should recommend to all of the hospitals that patients of G. H. A. may be treated in the local hospitals but that such patients may be treated only by the members of the staffs of the hospitals."

But the hospital committee had been careless, and Yater pointed it out.

He pointed this out, your Honor. He said:

"Oh, well and good, but there is nothing to show, so far as we know, that G. H. A. doctors are not on the staffs of these hospitals or that they might not become members of the staffs."

And so, on a motion made by him—this is his motion of which Mr. Leahy spoke this morning—on a motion made by him this first resolution of the hospital committee was recommended to the committee with instructions to come back with something else because this had this dangerous loophole in it.

And as a result of that motion of the defendant Yater the hospital committee came back on December 1 with the December 1 resolution recommending that all hospitals have on their staffs only members of the local society and of the A. M. A.

Now, that is Yater's participation.

Of course, Yater was on the staffs of the local hospitals.

Now, let me come to the defendants Martel and Young, because I think we completely disposed of Yater and Christie.

Certainly if there was an action at any time in this conspiracy of any kind whatever it was the action of Willson, Christie, and Yater.

To consider Young and Martel it is necessary for me to stress, if your Honor please, what I don't believe your Honor is aware of, and that is the significance of the action of this hospital committee of the D. M. S.

As I have said, it was this committee which was charged with arranging to carry out one of the most important phases of this conspiracy, the hospital boycott.

It was charged on November 3, it reported back eight days later with this resolution which Yater had recommitted.

It reported again on December 1, reported through its chairman, Dr. Warfield, a defendant in this case.

And then the defendant Mattingly—on motion of the defendant Mattingly on Feb. 2, 1938 that the proper agency of the Society investigate what the hospitals were doing with respect to G. H. A. preliminarily to disciplinary action by the Society in the event that any of the hospitals were not complying with its wishes—and let me show you what the evidence shows—concerning the means which the hospital committee took—and this bears directly on Martel and Young—the means which the hospital committee took to determine whether or not the hospitals were complying with the wishes of D. M. S. preliminary to action by the Society in the event they were not.

The action shows—the evidence shows that immediately thereafter, the day after this resolution was adopted, Dr. Warfield communicated with every member of the committee to ascertain what each hospital in the District of Columbia was doing.

And I think I should observe here that each of these members of the hospital committee represented a particular hospital.

There were only eleven members and eleven hospitals in the District, and each of them represented a hospital.

So Warfield communicated with each one of the members of that committee, and that is the evidence in this case, your Honor, by this letter of February 3 requesting information concerning what the hospitals were doing.

Now, let me show you—Before I do that—Before I come to the evidence about Young and Martel let me make these observations:

After he had done that he sent a questionnaire to all of the hospitals and this questionnaire was returned by various members of the hospital committee with the various blanks filled out.

I don't think your Honor would have any difficulty in looking at that questionnaire and concluding that it was part of the duty of that hospital committee delegated to it by the Society on February 2 as a result of Mattingly's resolution.

Then what did he do?

He took those questionnaires, made that pencil notation which your Honor saw, listed the various hospitals, listed the various inquiries and then he put on 0-0-0 all the way through so far as the membership for G. H. A. doctors was concerned, and "Yes" as far as cooperation with the D. M. S. was concerned.

And in that your Honor will note—Sibley has one member on, Scandifio.

The questionnaire shows that that hospital with Scandifio's name is stricken out.

Now let me show you how this ties up with the official action of the Society.

On March 28, 1938 the defendant Warfield reported to the Executive Committee that—and I quote—

"All of the local hospitals are cooperating."

And that meets the Scandifio claim of his rough draft.

All of them are cooperating.

Only one, and that is Sibley—has a member of G. H. A. on its staff, and that hospital has given assurance that it will take steps to exclude that doctor. Now, where is the importance in this, your Honor?

It is important for this reason, so far as Young and Martel are concerned.

This is the action of that committee, and the resolution, the mechanics taken by a committee acting continuously from Nov. 3, 1937 until April 1938.

And here is what Young did:

Young answered the letter of February 3 in the following way—Young represented Casualty Hospital—and he said this:

"To date we have had no application from any physician or surgeon connected with Group Health Association.

"If there is any further information I can give you regarding this matter, I shall be glad to cooperate with you in any way."

THE COURT:—Was he a member of this hospital committee?

Mr. Kelleher:—I am going to come to that right now, your Honor.

I call attention also to the fact that he filled in this questionnaire which Warfield sent to every member of the committee.

That questionnaire for Casualty is identified as having been filled in by the defendant Young.

Now, let me come to your Honor's question.

The stipulation does not show that Young is a member of the hospital committee of the Society.

It shows this, however, it names all of the members, and then states "Proof of additional members may be made by either party in this case."

What does the proof show?

The proof shows first, Exhibit 312, which has been identified by Dr. Warfield's secretary as having been prepared by her under the direction of Warfield, that exhibit carries a heading "Hospital Committee" and included in that list of members of the hospital committee is the defendant Young for Casualty.

Second, your Honor heard the testimony of Rogers on the last day of the trial; president of the board of directors of Casualty Hospital.

And let me quote that evidence so that there will be no mistake in the matter:

"My recollection is"—

and this is in response to questions by Mr. Lewin—

"My recollection is that I knew that he"—

and he is speaking of Dr. Young—

"was a member of the hospital committee. I was probably informed by him, I don't know just when, I don't know whether he succeeded Dr. Lewis."

But I combined this statement with Exhibit 312 which shows his membership on the committee, and I don't think there can be any question; but whether there is a question, the fact as to whether he served on that committee; and combined with the additional fact that the evidence shows that Lewis was out of the country and in Panama and never returned, and that he was a representative of Casualty until he left; combining the additional fact that Young filled out the questionnaire for Casualty; that he answered the Warfield letter of February 3; and I submit that there could be no doubt in any reasonable man's mind on that phase, on this letter, that Young was a member of that committee and was acting—and was engaged in the activities of that committee, the important activities of that committee which led to the exclusion of Dr. Selders and the other doctors of G. H. A. from the staffs of the local hospitals.

Now, one other fact concerning Young. I assume your Honor wants these details?

THE COURT:—Yes. I will give you a little time. Without going into too much detail. I remember the evidence pretty well. Just call my attention to the details.

Mr. Kelleher:—My point is this:

Mr. Leahy says we should segregate each act and put it under the microscope of the law, as he so picturesquely puts it; but you cannot do it that way. When we find any act here, it must tie that individual up with that committee if he is a member of the committee.

Now, in addition to the activities of Young on the hospital committee there is this further fact:

Young was on the credentials committee of Casualty.

Bear in mind, your Honor, that the hospital committee was instructed to develop some means for bringing to the attention of the medical staffs and the boards of directors of the local hospitals the attitude of the Society towards G. H. A.

Now, here is Young on the staff of that hospital. And what was the action of the hospital?

First, the action of the credentials committee.

And that is Exhibit 590. And this is what Young recommends:

"The application of Dr. Raymond E. Selders has been duly considered and it is the opinion of this committee that the qualifications and experience of this applicant at this time are such that disapproval of the application is recommended."

No other explanation. Nothing further. Nothing to show whether his qualifications were ever considered, but all of these circumstances showing that the defendant Young was in this thing up to his neck.

Your Honor I think will also recall the fact that Mr. Kirkpatrick testified that he had a conference with Young and Rogers.

THE COURT:—Yes, I remember.

Mr. Kelleher:—In June 1938.

Now let me come to Martel. Martel is also on this hospital committee. It was so stipulated. He is also on the Georgetown staff. By virtue of the resolution of November 3 he is the one who was elected to bring to the attention of the medical staff and the board of directors of Georgetown Hospital the attitude of the D. M. S. towards G. H. A. Now, let us see whether he did it (examining paper). Exhibit 516 is minutes of the executive committee of the hospital staff, Jan. 20, 1938; shows that Rodriguez, Sister Rodriguez, requesting instructions concerning an emergency case in the hospital, and asking whether after forty-eight hours Selders should still be permitted to treat the case. The minutes say Martel thought Penniman was pressing Rodriguez on a good opportunity. Martel moved to inform Selders that an emergency no longer existed. That is Exhibit 516. This is the gentleman of whom Mr. Leahy said there was no evidence whatever.

Mr. Leahy:—You don't call that evidence, do you?

Mr. Kelleher:—Don't say I don't. Say you don't.

He was also present at the meeting of March 10, 1938, another meeting of Georgetown. And here is what happened there. The Berry letter was read. Your Honor will remember that letter. Inviting these hospitals to a meeting at which G. H. A. should be discussed. And here is what happened: A resolution was adopted at this time that any G. H. A. patient would be admitted and cared for by the doctor of his choice if that doctor was on the staff. And here is what Martel says. Martel says, "Now, Scandiffo is qualified but he has done something the hospital does not approve and G. H. A. would

like to have somebody say so." And Martel first declined to go, finally, April 3, 1938 Martel appears at the meeting of the executive committee again. And here is what happened there: Sister Rodriguez requested a ruling on a patient of Hulburt's, and that, your Honor, was the Moriarity case, about which Hulburt testified. On motion by Stanton—and this is evidence on Stanton again—on motion by Stanton the hospital moved to adopt definition of Children's Hospital concerning emergency cases. Now, what do these minutes show so far as Martel is concerned? At the very last they show that the defendant Martel was participating with knowledge in the meetings of the hospital in which G. H. A. was considered. What was the action of the hospital? That document was introduced this morning. In that document Selders was notified that his application for minor surgical, major surgical and gynecological cases was rejected. No explanation whatever. Rejected, your Honor, for minor surgery; surgery which Halstead testified any general practitioner is qualified to perform.

No explanation for that!

What other reasonable explanation could there be than that Martel, the representative of the hospital committee in that hospital, was succeeding in persuading that hospital to reject Selders because of his connection with G. H. A.

One other defendant, then, and I am through, and that is the defendant Reede. The defendant E. Hiram Reede. Mr. Leahy says that all he did—and how anybody could do much more I am at a loss to explain—but all he did was to sit in the Lee and Scandiffo trial. But here is what he didn't bring out; I believe he didn't bring out that the defendant Reede was the officer who presided at that trial and ruled throughout the proceeding. Now let me point out one brief quotation. (Examining paper.) Well, your Honor, I am referring to the proceedings of the Scandiffo and Lee proceedings, and as I understand your Honor's ruling—

THE COURT:—That is in as to one purpose?

Mr. Kelleher:—It is in as to what the defendants knew and did.

THE COURT:—What is that?

Mr. Kelleher:—There is some understanding.

THE COURT:—It was in for the purpose of showing who was there.

Mr. Kelleher:—Only for the purpose of showing who was there. It shows the defendant Reede was in attendance there.

And let me show you what the minutes show, and I think I can correctly characterize the other evidence in the case.

On December 10 the minutes show that the C. C. & I. M. Committee reported to the executive committee that because Lee had agreed to resign from G. H. A.—to resign from G. H. A.—the C. C. & I. M. Committee was recommending that the charges against him be dismissed. And at this meeting, and this was the meeting at which Reede was presiding, and I believe the minutes show that he read that report of the C. C. & I. M. Committee—then on motion of somebody in the executive committee the charges against Lee and Scandiffo—or against Dr. Lee, were dropped. And as a result of these proceedings the charges against the defendants in that case in which the defendant Reede in this case presided, Dr. Scandiffo was expelled from the Society.

I thank you. I am sorry, your Honor. There is one other point and that is the Harris County. Would your Honor care to hear me?

THE COURT:—Proceed. Yes. I would like you to summarize what you understand.

Mr. Kelleher:—Yes, your Honor.

Let me briefly summarize first what occurred down there, as I understand it. The evidence shows that Homer Taylor was chairman of the State Association. Early in the fall—late in the fall, around October and November of 1937, Homer Taylor was communicating with the defendant Conklin. He was communicating about G. H. A. And here is what Conklin wrote Taylor on October 30. He stated that G. H. A. was progressing, that a banquet was being held, and of course the president of the Society chair at that banquet would be another empty chair.

Then he goes on:

"The staff is made up of three doctors, and you may have some interest in this in view of the fact that one of the doctors is a member of the Harris County Medical Society."

Taylor then replies to Conklin and says:

"Please let me know as soon as possible so that charges of unethical conduct may be successfully lodged against Selders."

Now, here we get to the Harris County Society.

On Nov. 25, 1937, Ashburn, the superintendent of Columbia Hospital, dictated a communication to the secretary of the Harris County Society stating this:

"We seek your"—and I am paraphrasing—"We seek your aid in determining the qualifications of Selders. Selders is an employee of an H. O. L. C. cooperative. The movement has caused"—and I am quoting—"much opposition in local medical circles. Selders"—and I quote again—"while educationally a well-trained man has not submitted evidence of special training."

And then he says this:

"Because of the special circumstances of the particular case, any assistance you can give will be appreciated."

And what does Coole reply? Coole, who was on the staff, and secretary of Harris County, he says:

"The record shows he is well qualified."

In addition he has also learned that he took a postgraduate course at Pennsylvania, and this should add to his training.

"His record is clear but I have been informed that he is employed with H. O. L. C. Our board of censors is investigating."

And then this:

"The Harris County Medical Society strictly condemns any such practice and if the allegations are found to be true, Selders will be subject to disciplinary action."

What occurs after that? Talley writes to Conklin, and Talley was the chairman of the board of censors of Harris County, and he writes this:

"Harris County is very anxious to know the medical status"—

not of Selders, but of G. H. A. That is what they are anxious for. Of G. H. A.

"We are also anxious to know the ethical standing of the men who compose this staff, as one of the staff members belongs to our local society."

Conklin replies immediately, Jan. 19, 1938, Exhibit 80, and this is what he says; he describes the expulsion proceedings which have been instituted against Lee and Scandifio.

There is suggested now about what Harris County Medical Society ought to do. He points out that one of the doctors, Dr. Lee, resigned after the first night of the trial, and the other doctor however has continued and he no doubt will be expelled.

THE COURT:—Do you have the individual members, officers, of the Harris County Society as defendants?

Mr. Kelleher:—No, your Honor. Just the Society.

Talley reported—here is the action of the Harris County Society:

Talley reported—and this is January 26, the first of the year, Talley reported on the matter of one of our members affiliated with a contract organization in Washington, D. C.

This report was adopted.

Now, what was the action of the Society that day?

That is shown by a letter from Talley to Selders dated Jan. 31, 1938, and this is the crux of the matter, and I shall read an excerpt from the letter.

The board of censors reported to the Society that from their interpretation of the code of ethics of the American Medical Association that it was unethical for one of our members to accept a position of this kind.

This interpretation was upheld by unanimous vote of the Society. This interpretation that association with an organization of this kind is unethical was upheld by a unanimous vote of the Society. And that is the chairman of the board of censors writing to Selders. And will your Honor note this last significant sentence:

"Hoping you will continue to be with us and that we may hear from you immediately."

What more could there be for a suggestion that the best thing for Selders to do if he wanted to be with them was to resign from G. H. A.?

Selders wrote back requesting a frank statement of the grounds of the charge against him.

Then Talley—well, your Honor, the evidence shows that the Harris County Society tried to pass the buck, and that is about all it amounted to, tried to pass the buck to the A. M. A.

So it referred the matter to the Judicial Council and asked the A. M. A. for a construction of the constitution, that is,

whether since Selders was up here in Washington and not in Texas, whether therefore there wasn't a dispute between the D. M. S. and the Harris County Society, and therefore shouldn't the Judicial Council take them out?

Well, the Judicial Council rejected it. And then it went back to Harris County. And what occurred?

THE COURT:—I think I remember that pretty well.

Mr. Kelleher:—All right, your Honor.

THE COURT:—They decided it involved a legal question and they couldn't go any further.

Mr. Kelleher:—No, your Honor, they did go one step further. I would at least like to point out what we consider to be the significance of it; the evidence shows I believe that West wrote to the Harris County Society and said in effect, Look, there is a provision of the constitution which provides that if a member of a local constituent society leaves the state and goes to some other state and doesn't take out membership in another state society, he loses his membership in that society. In the local society, from which he leaves.

So what do they do? They require Selders to transfer or to make application for transfer from Harris County to the D. M. S. And the last thing the evidence in this case shows is that his application for transfer is accepted. And what is the result, your Honor? What other result could there be than that they got him out of the Harris County Society and now they are going to leave it up to the defendant D. M. S. to keep him out? And the indictment was returned about a month later.

THE COURT:—Well, they refused to take any action against him being employed in G. H. A.

Mr. Kelleher:—No, your Honor. There are two answers to that. In the first place, they did take action. The board of censors found he was unethical. The Society adopted it by unanimous vote. Now, that is the first thing. This action against him. It is clearly conspiring. And the evidence shows it was done to induce him to leave G. H. A. They were trying to discredit this man and to get him out of the A. M. A. But after going through all these steps they found a simple way to do it, and that was to make him transfer. Get him out of this Society, and he cannot get into the D. M. S., and he is completely obstructed and cannot get into the hospitals in the District of Columbia.

THE COURT:—You don't think their action could just as reasonably be attributed to the fact that they felt after all that they should not participate in this controversy as it related to Selders?

Mr. Kelleher:—No, your Honor. Not in view of the fact—(There was laughter in the court room.)

Mr. Kelleher:—I don't think this is a laughing matter, is it?

THE COURT:—I have asked several times and I am very much opposed not only as a matter—it doesn't comport with court procedure, laughter either during arguments of testimony, and I simply will not put up with it in future. I have made that request several times. If it occurs again among those who have been here continually, I am going to take some action. Let that be understood.

Mr. Kelleher:—Your Honor, I think—

THE COURT:—This to me is not a funny matter. It is a very serious matter. I don't know how the defendants take it. Apparently there are some very humorous things about it. Proceed.

Mr. Kelleher:—In answering your Honor's question, I think if we had only the action there, it might be susceptible to the construction which your Honor suggests, but I think in view of all of the correspondence, the correspondence between Taylor and Conklin, and then between Talley and Conklin, and then, your Honor, this letter, this reply to Columbia Hospital—that in itself is almost enough because we know that this hospital is inquiring about his standing down there; and they write back and say, "Oh, we find that if he participates in that sort of thing it is unethical."

THE COURT:—I see your viewpoint. But there is the thing that is running through my mind: When they were brought up to the consideration, up to the brink of entering into a conspiracy or into an unlawful scheme and then upon consideration see the wrongness of it or the dangers of it, if then they take action whereby they drop further consideration of it, have they gone into it; or, if so, have they withdrawn from it?

Mr. Kelleher:—I understand. I would like to meet that if I can by this: The point is they were in it. That is our conten-

tion, at least. They didn't have to go to the extent of throwing him out.

THE COURT:—If they were in it—

Mr. Kelleher:—Yes. The board of censors held him unethical. And the Harris County Society unanimously approved that action of the board of censors. Now, that is action, and that is conspiring. But let me show they did do exactly what they set out to do. They didn't have to throw him out. They adopted a less burdensome means of getting rid of him. And let me show your Honor this correspondence of West to Taylor calling attention to the provision that membership is limited to physicians who reside and practice in the counties immediately concerned. "The gentleman referred to in the correspondence"—which would mean obviously Selders—"is not in practice in Harris County. The by-laws of A. M. A. specifically provide that a member of A. M. A. who removes to another state shall forfeit membership unless within one year after the change he becomes a member of constituent association in the state to which he removes." Now, what did they do? They obtained from Selders a letter requesting his transfer. They have to do that but he is going to lose his membership. So he sends that down and they transfer. All this in the possible action of the Society furnishing the most simple and most expedient way of getting rid of that doctor.

THE COURT:—There isn't necessarily anything indicative of anything wrong in such a provision, is there?

Mr. Kelleher:—Your Honor, I think in view of all the prior correspondence on the thing—

THE COURT:—Your point is the coincidence?

Mr. Kelleher:—Yes. And I think it becomes a question of fact. Mr. Lewin points this out and I think it is a good suggestion: For one whole year, from January until November, 1938, they kept that doctor under a cloud. They declared that he was unethical. They wrote to Columbia Hospital and advised Columbia Hospital accordingly. The necessary effect of that must have been to discredit and repudiate Selders and then hinder G. H. A. in its efforts to get into the hospitals, its efforts to gain doctors with prestige. I think, your Honor, in all of those circumstances there is at least a question of fact for this jury as to whether Harris County was participating in the conspiracy.

Mr. Leahy:—If your Honor please, may I take just about five or ten minutes?

THE COURT:—Let us see if they are through. You wanted to close. I will give you a few minutes to close.

REPLY ARGUMENT ON BEHALF OF THE DEFENDANTS WILLIAM E. LEAHY

Mr. Leahy:—If your Honor please, I think the Harris County Medical Society can be disposed of rapidly. I speak for it because there is nobody here to represent the Harris County Society except ourselves sitting here at the trial table.

At the outset I want to advert to the basis of your Honor's ruling admitting in evidence certain letters. The letters were admitted upon the specific determination by your Honor that the contents of the letters, the facts contained therein, were not evidence; they were merely brought into the case in order to show that a particular defendant who received such letter had the knowledge of whatever that letter said.

When we come to the Harris County Association we have some letters which are written by Dr. Conklin to Dr. Taylor of the State Society. We have letters back and forth from Talley and Conklin, but we do not have any action taken by the Harris County Society, save and except this, that they thought—and by a vote which was taken of the body of Harris County doctors—that it was unethical for Dr. Selders to practice medicine under the scheme of G. H. A.

That is all we have in the case with regard to the Harris County Medical Society. Then when charges are preferred they think that the best procedure to take, after advising with the Judicial Council of the American Medical Association, is to drop the case entirely.

Now the point is made that they sought the transfer of Dr. Selders. They did not do any such thing. There is no evidence in this case whatsoever that anybody induced Selders to ask for a transfer. All we have is Selders' request; and the complete answer to that is this, if your Honor please, that in the letter of Dr. West to the Society calling attention to the fact that under the American Medical Association rules, if a doctor has been absent from the county in the jurisdiction of his society for a year, he is subject then to be dropped from the society or he may seek admission in some other jurisdiction

where he is. The Society of Harris County accepted the back dues of Dr. Selders in full for the year of his absence, and the last entry was that Dr. Selders was a member of the Harris County Society.

They forgot to bring to your Honor's attention that when Dr. Coole was on the witness stand I asked him whether Dr. Selders was still a member of the Harris County Society, and he said yes.

That is the Harris County incident. There is no evidence whatsoever that they joined in any combination or conspiracy such as detailed in this indictment.

Mr. Kelleher:—Of course the indictment was returned on December 20, one month afterwards.

Mr. Leahy:—That is all right. But you have injected in here that he was transferred or kicked out or something. The truth of the matter is that the Harris County Society accepted his dues for the year he was absent and he is still a member of it; and there is no evidence in the case whatsoever to the contrary, except the ingenuity of counsel to try by all of their argument, which has been characteristic throughout, to ask your Honor to accept suspicion for proof; and it is only the ingenuity of counsel in raking over all this documentary evidence to inject into your Honor's mind the notion that their suspicions of what might have happened occurred, when we have the proof of what actually happened, showing that the suspicion is unjustified. So that is the Harris County case as it stands here before your Honor.

Now, let us take the case of the Academy of Surgeons. That is the other organized defendant. What do we have with reference to the Academy of Surgeons on which they ask your Honor to hold that these people who constitute the Academy of Surgeons as a separate entity was a conspirator?

They had three grounds. They stated to your Honor that in the minutes of Dec. 10, 1937 there was a statement made in the shape of the presentation of a motion that in the consideration of any applicant the ethical practice of the doctor should be considered as well as his qualifications.

What is your Honor going to draw from that? What is wrong about that? Is it wrong that a body of surgeons should say, "Here, just wait a minute. This man may be the finest surgeon in the United States and the worst abortionist"? Can they not consider that when they are considering his qualifications?

They put Dr. Fishback on the witness stand here, who was the one who sent this letter of which now they make such importance before your Honor. But let us not forget these little facts. Dr. Fishback, they said, wrote a letter to the Credentials Committee of the Academy of Surgeons on the 9th day of December 1937. I tried to jot down what the words of the letter were. He was anxious to talk with Dr. Lyons, the chairman. Not a conspirator; not mentioned as a defendant; nothing in this case to show that Dr. Lyons is anything other than the fine gentleman he is. This man, Dr. Fishback, who was on this witness stand, called as a witness for the prosecution, wrote to him and said:

"I am anxious to talk with you before you reach any decision in the application of Selders, especially if there is any feeling that he should be disapproved purely because he is a member of G. H. A."

What is the inference there? That Dr. Fishback wants Dr. Lyons to know that Dr. Selders should be given a fair investigation and that there should not enter into his approval or his disapproval any question whatsoever of his connection with G. H. A.

That must be it, or they would have asked Dr. Fishback on that stand when he was here, "What about that?" If Dr. Fishback intended what the ingenuity of counsel wants to engender in your Honor's mind now, don't worry; they would have asked Dr. Fishback and your Honor would not have to guess what it is all about. Your Honor would have evidence instead of suspicion.

What did they do? The Academy of Surgeons, composed, as I have stated, of all of the surgeons in the District of Columbia who are practicing general surgery and who must be members of the District Medical Society—that Academy which has been requested to make a report upon the qualifications, makes a report and recommends to the hospitals, Georgetown, Providence, George Washington and some more, that his qualifications are such that he should not be admitted to the hospitals, and recommends against his application.

THE COURT:—What was the application for?

Mr. Leahy:—That does not show.

THE COURT:—Was it for a particular kind of surgery?

Mr. Leahy:—I do not know. It is not in the evidence.

THE COURT:—General surgery or minor surgery, or what?

Mr. Leahy:—It is not in the evidence as to what was before them. The report was not presented. I do not know whether the folder of the Academy of Surgeons shows the report or the basis for it. It seems strange if it does not contain it, and yet they cull from the files just the letter of Fishback and a motion which was made by Dr. Segar, I think, who is not a conspirator. Not a word against him. Not any of these men who passed on the qualifications of this man is a conspirator. Dr. Fred Sanderson is not mentioned as a conspirator. Dr. Lyons is another one. Not a word against them. But because the Academy of Surgery, composed of all of the surgeons of the District of Columbia, finds upon investigation and reports back that the qualifications of Dr. Selders are not sufficient to warrant his acceptance upon the hospital staffs, therefore they say your Honor must conclude that that was something hostile and inimical, at the very foundation of the entire proceedings, and that no ground existed other than hostility to G. H. A.

Mr. Kelleher:—May I correct one thing at this time? The evidence does show that at that time he applied for major surgery and that—

Mr. Leahy:—I am not talking about that.

Mr. Kelleher:—I am talking about that letter from Fishback to Providence Hospital, which shows that he applied for major surgery and general surgery at Georgetown, and Georgetown denied him even minor surgery there, and he applied for surgery at Garfield.

Mr. Leahy:—All right. He applies for the widest type of surgical practice you could get. But what group in the District of Columbia was more qualified to pass upon such qualifications than those physicians in the District of Columbia who are practicing general surgery? I ask, if your Honor please, where could the hospitals go to get advice of that kind? What has this body of fine surgeons done to be charged as conspirators?

They did their duty. They made an investigation. They reported it. The Credentials Committee had upon it no members who are named as conspirators. They sent back their report to the different hospitals; and that is everything we have.

I submit that that does not rise to any consideration of what evidence is. It is merely suspicion engendered by the ingenuity of counsel in order to conceal what the true facts are in the case.

Mr. Lewin:—May I interrupt to say that Mr. Kelleher outlined in great detail the evidence which shows that each member of that committee was connected with this conspiracy.

Mr. Leahy:—I know all about that. I cannot go over that; I haven't the time. There is nothing in this case against either of those two defendants which arises above suspicion.

With a wave of his hand, if your Honor please, counsel just simply says that Yater, Young and Martel are all conspirators—

Mr. Kelleher:—I said that about Yater.

Mr. Leahy:—All right; Yater, then. We will come to him in a minute. Yater proposed one motion in November, and when a report came back from the Hospital Committee he said, "Let us refer this back to the Hospital Committee for further consideration." And this man is to be charged with all the knowledge of this conspiracy.

THE COURT:—What were the grounds upon which he said that?

Mr. Leahy:—Because he said at that time the report had in it something to the effect that patients of Group Health Association should be treated by hospitals, and Yater thought they ought to be treated by members of the staffs of the hospitals, and Yater says, "It doesn't appear whether they are members of the staffs of the hospitals or not"—

Mr. Kelleher:—Or might become members.

Mr. Leahy:—All right. He said, "Let us send it back." He never did a thing in reference to it. There is no evidence in this case that he did anything in reference to it, not one bit, not one whit, not one line of evidence. Again I say there is nothing in this case but suspicion.

What in the world did Dr. Martel do with reference to this conspiracy? He sat over there one day in a board meeting of the doctors' staff of Georgetown Hospital and said, "I think Dr. Scandifio is qualified, but the hospitals think he has done something which we don't agree with."

Then they said something about every one coming to attend a meeting of the hospitals, and he said, "I don't want to go."

Therefore he is a conspirator. What kind of arguments are those, if your Honor please?

Mr. Lewin:—Would you mind reading what he said there (handing a document to Mr. Leahy)?

Mr. Leahy:—I will be glad to. Where is Yater mentioned in here?

Mr. Lewin:—Right here (indicating).

Mr. Leahy:—(reading):

"Made a motion to the effect that the recommendation of the Hospital Committee be recommended to the committee on the ground that there seems to be no assurance that members of the staff are not already or might not become members of the staffs of local hospitals if finally adopted."

That is nothing but inference.

Mr. Lewin:—Oh, no.

Mr. Leahy:—You have had your say.

He made one motion. No action was even taken; not a word spoken outside of that motion, not a single word. If your Honor please, this thing is supposed to have stretched from January down through December 1938, two years, but when they cannot find out of the mass of this evidence and all the oral testimony a single thing that the doctor has done, except dragging it in in this fashion, it shows not the fact of his membership in the conspiracy, but that in the desperation of the prosecution they are trying to make out of it something that is not in it.

A number of them are in that same group. Martel is in that same group; Young is in that same group. There is nothing in this case to show that he was a member of any hospital committee. When Lyons was on the stand and he was asked with reference to this—Pardon me; I think it was Mr. Rogers—what he there said was admissible because the Doctor was a defendant, and your Honor admitted it on that ground; but before it becomes an admission against him they must first show that he entered the conspiracy. Otherwise it is not an admission against him. They cannot prove it.

Mr. Kelleher:—Do you mean that the Mattingly letter does not come in against Mattingly? That is what your argument is.

Mr. Leahy:—It is not; nothing like it. Here is a hearsay statement put into the record by Mr. Rogers. Absolutely no proof. If he was on the Hospital Committee, why did they not prove it?

Mr. Lewin:—We have proved it.

Mr. Leahy:—No, except by a hearsay statement. And then Rogers said, "I don't know when he was on the Hospital Committee." That is what Rogers said. And yet Dr. Young answered the questionnaire and he said, "Up to this time we have had no applications from any G. H. A. doctors. If there is any further information you desire I will be glad to answer."

Are those the words of a conspirator? Is your Honor going to hang a man into a conspiracy of this type and charge that man with knowledge of what went on and with the purposes outlined here because he makes that kind of a statement? Nobody would be safe under the outline that is urged by the prosecution if this were a fact.

Now we come down to those who are not members of the local society. We come down to Dr. Fishbein and Dr. Leland.

THE COURT:—You have five more minutes, Mr. Leahy.

Mr. Leahy:—May I call your Honor's attention to this. There is not a single line of evidence brought to your Honor's attention yet about Leland; not one. The only evidence which they brought was a letter, and in that letter Leland had proposed that the Society should form an organization of its own. There is not a line of testimony against Leland. Everything that was read to your Honor was written by somebody else. In every one of those letters there is not a single line against Leland. There is not a single line against Fishbein; and it cannot be charged that because an article is published in *THE JOURNAL* therefore Dr. Fishbein is to be charged with everything else that was done after that article was published.

I still say, in all of the time which was taken, two and a half hours, they have not brought to your Honor's attention any real evidence against any of these defendants, either corporate, association or individual, which I brought to your Honor's attention this morning. It does not rise above suspicion.

Secondly, the proof upon which they rely is to be found written in letters by others which your Honor admitted not as proof of the facts contained therein, because they are pure hearsay, but only and solely for what the person who received the letter may have known of the contents thereof.

Leland never received one and he never wrote one. The same is true with reference to Dr. Fishbein.

I respectfully submit that there is not anything which can possibly connect those defendants in any way with this conspiracy.

(To be continued)

MEDICAL LEGISLATION

MEDICAL BILLS IN CONGRESS

Change in Status.—H. R. 2082 has passed the House, proposing to empower the Secretary of the Interior, acting through the United States Bureau of Mines, to make annual or necessary inspections and investigations in coal mines to obtain information relating to health and safety conditions, accidents and occupational diseases therein.

Bills Introduced.—S. 985, introduced by Senator Russell, Georgia, proposes to amend the Selective Training and Service Act by providing that members of local boards and physicians and other persons who rendered services in connection with the work of such boards and whose compensation for such services is not otherwise provided for shall receive compensation at the rate of \$4 a day for the time actually spent by them in conducting or assisting in the work of the boards. S. 987, introduced by Senator Gurney, South Dakota, provides that any student who has heretofore sustained or who hereafter sustains a personal injury while engaged in receiving flight instruction under the civilian pilot training program provided for by the Civilian Pilot Training Act of 1939 shall receive such hospitalization and medical treatment as is provided for any officer of the Air Corps of the Army of the United States who receives a personal injury in line of duty. H. R. 3570, introduced by Representative Lanham, Texas, proposes a federal appropriation of \$150,000,000 for providing additional community facilities made necessary by national defense activities. This money, it is proposed, will be expended in accordance with such directions and regulations and on such terms and conditions as may be prescribed or approved by the President (a) to make loans or grants or both to public agencies for the construction, rehabilitation and operation of such facilities; (b) to construct, operate, lease or sell such facilities, including the acquisition of land and the demolition, repair or alteration of existing structures where necessary, and (c) for necessary administrative expenses. In a hearing before the House Committee on Public Buildings and Grounds the Assistant Coordinator of Health and Welfare and Related Defense Activities testified that out of the total appropriation to be authorized \$25,000,000 would be used for the construction of hospitals and \$4,200,000 for the construction of clinics. Furthermore, \$2,200,000 will be used for grants for hospital care of transient indigents, \$2,800,000 for grants for ambulatory care of transient indigents and \$1,000,000 for grants for hospital operation. H. R. 3778, introduced by Representative Mundt, South Dakota, proposes to create a Division of Water Pollution Control in the United States Public Health Service. H. R. 3928, introduced by Representative Mundt, South Dakota, proposes an appropriation of \$1,000,000 to construct a veterans' hospital in the First Congressional District of South Dakota.

STATE MEDICAL LEGISLATION

Arizona

Bills Introduced.—S. 151, to amend the workmen's compensation acts, proposes that an injured employee may elect to be attended, at the expense of the state fund, by a licensed chiropractor, osteopath, naturopath or other practitioner of drugless methods and thereafter is to be entitled to the benefits of the act to the same extent as if he had been attended by a licensed practitioner of medicine and surgery. The bill further proposes that, in connection with the provisions of the workmen's compensation act, licensed chiropractors, osteopaths, naturopaths and other practitioners of drugless methods are to be accorded equal rights and privileges with licensed practitioners of medicine and surgery by the industrial commission, by all public agencies, institutions, officers and employees and that the discrimination against any licensed drugless practitioner in this respect shall automatically cause the holder of any public employment or public office causing, permitting or participating in any such discrimination to forfeit his office or employment. H. 205 proposes to prohibit the maintenance and operation of a maternity hospital unless licensed by the state board of health.

Delaware

Bill Introduced.—H. 237 proposes to enact a separate practice act for dispensing opticians and to authorize the Medical Council of Delaware to examine and license applicants for licenses to practice as dispensing opticians. The bill proposes that "Individuals and firms filling prescriptions of physicians and surgeons licensed by the Medical Council of Delaware for ophthalmic lenses and kindred products, and as incidental to the filling of such prescriptions, taking facial measurements and fitting and adjusting lenses or frames, shall be known as dispensing opticians." The bill further proposes that it shall not affect any person licensed as an optometrist or a physician and surgeon but that this exemption shall not apply to any optometrist or a physician exclusively engaged in the business of filling prescriptions for physicians and surgeons.

Illinois

Bills Introduced.—S. 15 and H. 86 propose that "If it is alleged in the indictment or information, or upon the trial, that the defendant was under the influence of intoxicating liquor when he drove a vehicle, the court may admit evidence of the amount of alcohol in the defendant's blood at the time alleged, as shown by a chemical analysis of his urine, saliva, breath, or other body substance." S. 103 proposes to make it unlawful for any person to use the designation "Certified Consulting Psychologist" or any similar term unless he has been licensed so to practice by the Department of Registration and Education. No person shall be eligible for such a license unless, among other things, he has received a degree of doctor of philosophy in psychology or of doctor of science in psychology from a college or university approved by the department, or a degree of doctor of education or doctor of philosophy in education from a school or university also approved by the department and he has also had two years' experience in the application of the principles and technics of the science of psychology.

Kansas

Bills Introduced.—H. 143 proposes to authorize the governing body of any city of the second class having a population of not less than five thousand nor more than eight thousand and located in a county having a population of not less than eleven thousand nor more than fourteen thousand to issue bonds in the city in an amount not exceeding one hundred thousand dollars to build and equip a municipal hospital. The governing body of such a city is to have the power to rent, lease or let such hospital to any person or corporation on such terms and conditions as the governing body deems to the best interests of the city. H. 367 proposes to authorize the governing body of any city of the second class located in a county having a population of not less than fourteen thousand nor more than eighteen thousand and having an assessed tangible valuation of not less than twenty-five million dollars nor more than thirty-five million dollars and having within its boundaries two or more cities of the second class to issue the bonds of such city in an amount not exceeding thirty thousand dollars to construct and equip a municipal hospital. The governing body of such a city is to have the power to lease, let or rent said hospital to any person or corporation on such terms and conditions as it sees fit.

Massachusetts

Bills Introduced.—H. 1018 proposes that the physical examination given school children shall include an examination of the feet given by a person well qualified to examine feet. H. 1564, to amend the medical practice act, proposes that the board of registration in medicine in its examinations of applicants shall have requirements "at least as qualifying as the standards of admission recommended by the national board of registration in medicine."

Michigan

Bill Introduced.—H. 209 proposes to repeal the basic science act.

Nevada

Bill Introduced.—A. 121 proposes to condition the issue of a license to marry on the presentation by each party to the proposed marriage of a certificate of a licensed physician that the party has been given such examination, including a standard serologic test, as may be necessary for the discovery of syphilis, made not more than thirty days prior to the issuance of a license and that in the opinion of the physician the party either is not infected with syphilis or, if so infected, is not in a stage of that disease which is or may become communicable to the marital partner. The charge for the physical examination and certificate of the physician is not to exceed \$5.

New Mexico

Bills Introduced.—S. 216 proposes to authorize the county commissioners of the several counties to established county hospitals in their respective counties. H. 210 proposes that "The right to choose and designate one's own physician or surgeon is hereby declared an inviolate right. Except in workmen's compensation cases and in such other cases where medical care and consultation is provided without obligation on the part of recipient to pay therefor, no person living or residing in the state of New Mexico shall be compelled, coerced or intimidated in contracting for, procuring or accepting the services or professional care of any particular physician or surgeon or the care or services of any physician or surgeon of any particular school, class or association."

New York

Bills Introduced.—S. 1103 and A. 1426, to amend the medical practice act, proposes to exempt from its provisions "any physician or surgeon employed in the United States veterans' administration while engaged in the performance of the actual duties prescribed for him under the United States statutes." A. 1231 proposes to create a temporary state commission to study and investigate the system of physical education and medical inspection in the public schools, to make recommendations for the carrying out of a physical education and medical inspection program which would adequately equip the youth to be in physical condition.

North Carolina

Bill Introduced.—H. 372 proposes to authorize the State Commission for the Blind to employ reputable optometrists to provide the services, "provided, however, nothing in this section shall authorize the employment of optometrists in work under supervision of the Federal Social Security Board which would affect federal grants to the state of North Carolina for aid to the needy blind."

Ohio

Bills Introduced.—S. J. Res. 15 proposes to require the presiding officers of the house and the senate to appoint a commission to hold public hearings, to make investigations of the health laws of the state and to report to the general assembly its findings and such recommendations as it may make for their more efficient administration. H. 217 proposes to condition the issuance of a license to marry on the presentation by each party to the proposed marriage of a physician's certificate that the party has been examined within fifteen days prior to the application and that in the opinion of the physician the party is free from epilepsy, feeble-mindedness and insanity and is not infected with syphilis or is not in a stage of that disease which may become communicable, as nearly as these facts can be determined by examination of the party and by the application of standard laboratory tests for syphilis.

Oklahoma

Bills Introduced.—S. 163 proposes to authorize the creation of a county health unit in each county of the state, or a district unit, to be composed of a number of contiguous counties, the purpose of which is to promote the public health by education, training and the administration of preventive medicine, in cooperation and active participation of the state board of public health. The health units provided for in the bill are to be confined to the field of preventive medicine, "except in the case of patients afflicted with venereal disease, which may be treated

by said unit only when properly certified to the director by a doctor who is licensed to practice medicine or osteopathy, under the laws of this state, and under such regulations as may be prescribed by the state board of public health and United States Public Health Service." H. 297 proposes that "Any doctor, licensed and authorized to practice the medical profession in the state of Oklahoma, shall, upon request, respond and act professionally when called in any emergency." The bill proposes to define emergency as any childbirth case, or in case of a request for setting a broken bone, or a cut wound or bruise in case of injury or accident, needing immediate attention. If the patient fails for one year to pay the physician, the physician shall file a claim with appropriate county, which is required to pay the physician the usual fee for such services.

Pennsylvania

Bills Introduced.—S. Serial No. 30 proposes "That the senate of the general assembly of Pennsylvania request the secretary of public assistance to equitably revise the determinants guiding the prorating of fees payable to physicians attending recipients of assistance, as well as expedite the payments of amounts now due to such physicians." H. 537 proposes that any state or state-aided medical and surgical hospital shall have authority to issue stamps and to place any such stamps on sale. These stamps are to be redeemable by the hospital issuing them through hospitalization service. H. 555 proposes a procedure for the reimbursement of all hospitals not now receiving state aid for the expenses of indigent persons injured in motor vehicle accidents. H. 559 proposes to create the Pennsylvania State Institute for Cancer and Tuberculosis Research to conduct a study of and research into the causes, treatment and prevention and cure of cancer and tuberculosis.

Texas

Bills Introduced.—S. 214 proposes to make it the duty of the state department of health to enter into agreements with all licensed practitioners of medicine and dentistry in the state who are willing to agree to receive as patients and to treat destitute children, in accordance with the needs of such patients, at fees to be determined as provided in the act, to be payable to such physicians by the state. The schedule of fees is to be made in accordance with the recommendations of the State Medical Association of Texas and the Texas State Dental Society. H. 268 proposes to authorize the establishment and operation of a state cancer hospital.

Utah

Bill Introduced.—H. 168 proposes that the body of a person whose death occurs in the state shall not be removed to any autopsy room or to any place where embalming is done, nor shall any mutilation of any kind be permitted, until the body has been subjected to scientific life tests to determine whether or not death is complete. The nature and character of such life tests are to be ascertained from year to year by the head of the state board of health from the tests advocated by the American Medical Association and the National Selected Morticians. Such tests are to be administered by a physician or by a board of health medical employee at least four hours after death.

Washington

Bills Introduced.—H. 504 proposes to authorize corporations organized under the general laws of the state to transact a hospital association business if licensed by the insurance commissioner. The bill states that a hospital association business is carried on by any corporation, association or person "contracting or agreeing in this state with individuals, families, employees, associations, societies or with employers for the benefit of employees, for the furnishing of medicine, medical or surgical treatment, nursing, hospital service, ambulance service, dental service; or any or all of the above enumerated services or any other necessary services, contingent upon sickness, or accident."

Wisconsin

Bills Introduced.—A. 319 proposes that, whenever expert medical testimony becomes necessary or desirable in the establishment of the claim of an employee in connection with a claim

under the workmen's compensation act, the industrial commission may, after notice to the parties and a hearing, permit one or more qualified physicians, not exceeding three, to testify for the employee at the trial. The compensation of such medical witnesses is to be fixed by the commission. A. 334 proposes that the state board of examiners in chiropractic may issue

license without examination to any applicant who presents proof that he has been licensed to practice chiropractic in another state and has practiced for three years or more, if, in the state or states in which the applicant has so practiced, preliminary education which is not less than that required in the state is required.

OFFICIAL NOTES

RADIO BROADCASTS

The next three programs to be broadcast in the series "Doctors at Work" are as follows:

March 26. Health for the Workman.
April 2. Invisible Invaders.
April 9. The Life Ray.

The program is scheduled over the Blue network of the National Broadcasting Company Wednesdays at 10:30 p. m. eastern standard time (9:30 central, 8:30 mountain, 7:30 Pacific time).

Tickets for the broadcasts are available. Requests should be accompanied by a stamped addressed envelope.

WOMAN'S AUXILIARY

Minnesota

The Woman's Auxiliary to the Olmsted-Houston-Fillmore-Dodge Counties Medical Society held a meeting, January 8, in Rochester. Dr. F. M. Feldman, director of District 3, Minnesota Department of Public Health, and deputy health officer of Rochester, spoke on the undesirable housing conditions of Rochester. The St. Louis County auxiliary held its monthly meeting, January 14, at the home of the president, Mrs. W. N. Graves, Duluth. After the business meeting the members did Red Cross work. The chief project of the auxiliary this year is the furnishing of the patients' sitting room at the Nopening Sanatorium.

New York

The executive board of the woman's auxiliary to the Medical Society of the State of New York met recently at Garden City, L. I., with thirty-seven members attending. The board members were guests in the homes of members of the Nassau County auxiliary. The evening preceding the meeting a dinner was given for them by the president of the state auxiliary, Mrs. Luther H. Kice. Dr. Louis H. Bauer, a member of the preparedness committee of the state medical society, gave a talk on auxiliary preparedness. In the evening, the auxiliary to the Nassau County Society entertained at the Hempstead Country Club.

The Montgomery County auxiliary was organized recently. Mrs. Luther H. Kice, state auxiliary president, explained the purpose of an auxiliary. Mrs. J. P. Curran was selected as the chairman of a committee to draw up a constitution. Those attending from organized counties were Mrs. Kice of Garden City, Mrs. A. W. Greene, Mrs. W. F. MacDonald, Mrs. A. H. Coughdon and Mrs. L. P. Tischler of Schenectady and Mrs. R. F. Johnson and Mrs. G. C. Sincerbeaux of Auburn.

At their first meeting, November 1, the following officers were elected: president, Mrs. S. L. Homrighouse; president-elect, Mrs. P. J. Fitzgibbons; vice president, Mrs. W. H. Seward; secretary, Mrs. E. B. Kelly, and treasurer, Mrs. A. J. Tounley of Fonda.

Oregon

The auxiliary to the Multnomah County Medical Society met, December 9, at the Albertina Kerr Nursery Home for its annual children's party. Gifts were distributed from a Christmas tree. Mrs. Albert H. Cautril and Mrs. Charles H. Manlove spoke in behalf of the student loan fund, a project of the auxiliary. New loans to the amount of \$1,000 have been made this year to seniors in the medical school; there are three students on the waiting list. Twenty-two hundred dollars in a revolving fund is gradually being repaid. To date forty-two seniors and juniors have been aided. Miss Nell Under, librarian for the Library Association of Portland, spoke on "Reading for Pleasure" to the thirty-five members present. Volunteers from this auxiliary assisted, November 16, in the Red Cross drive, taking over booths for a half a day in banks and department stores. Six members of the junior auxiliary, an organization of wives of medical students,

also assisted. Volunteers sew one day a week at the Red Cross headquarters.

At the November meeting of the woman's auxiliary to the Marshfield, Coos and Curry Counties Medical Society, Mrs. A. B. Peacock talked about her visit to the Basque Colony in eastern Oregon.

Texas

The auxiliary to the Cherokee County Medical Society met recently at the Doctors' Home at Rusk State Hospital. Fourteen members and one guest were present. The program was based on material in *Hygeia*.

The auxiliary to the Childress-Callingsworth-Hall Counties Medical Society met with the medical society recently at a dinner. The auxiliary voted to sponsor an essay contest in all high schools in the three counties on the subject "Increasing the Span of Life" and to give several prizes.

The auxiliary to the Tom Green Eight County Medical Society met recently in San Angelo with members of the city federated clubs, Parent-Teacher Association and interested citizens as guests. Dr. Carl A. Kunath spoke on "Importance of the Periodic Health Examination in the Control of Cancer."

The auxiliary to the Lampasas-Burnet-Llana Counties Medical Society honored medical societies of the same counties with a fish fry recently.

Washington

The auxiliary to the King County Medical Society met, January 21, in Seattle with fifty members in attendance. Mrs. W. A. Willington presided. Mrs. Shelby Jared, legislative chairman, presented Dr. Frank Douglass, who spoke on "Important Legislative Messages." It was reported that three hundred and twenty subscriptions had been obtained for *Hygeia*.

The Pierce County auxiliary had forty members present at the January meeting in Tacoma at the home of Dr. and Mrs. Leo Hunt. The president, Mrs. J. B. Robertson, presided. Major Kenneth A. Whyte of the 116th Medical Regiment of Camp Murray talked on medical preparedness.

Ten members were present at the January meeting of the Chelan County auxiliary in Wenatchee. Mr. Giberson of the state health department spoke on "Sanitation and Health."

Twenty-eight members were present at the January meeting of the Spokane County auxiliary at the University Club. Dr. John O'Shea, a member on the National Medical Preparedness Committee, the guest speaker, told of the part that the American Medical Association is taking in national defense. Mrs. George Ford told of the work of the Canadian women in the Red Cross. The legislative chairman, Mrs. Clarence Lyon, informed the group of pending bills before Congress and the state legislature in regard to medicine. Fifteen dollars was voted to place *Hygeia* in the public schools.

The Grays Harbor County auxiliary met in January at the home of Dr. and Mrs. B. O. Swinehart in Aberdeen. Fourteen members were present. The auxiliary voted to subscribe to the National Bulletin.

Medical News

(PHYSICIANS WILL CONFER A FAVOR BY SENDING FOR THIS DEPARTMENT ITEMS OF NEWS OF MORE OR LESS GENERAL INTEREST: SUCH AS RELATE TO SOCIETY ACTIVITIES, NEW HOSPITALS, EDUCATION AND PUBLIC HEALTH.)

ADDITIONAL MEDICAL COLLEGE NEWS AND ARTICLES APPEAR IN THE STUDENT SECTION, PAGE 1325.

ARKANSAS

Personal.—The new county health building at Pine Bluff has been named the W. H. Bruce Building in recognition of the work of Dr. Bruce in Jefferson County. Dr. Bruce is city and county health officer.—Dr. Armour K. Wayman, Little Rock, has been appointed superintendent of the Pulaski County Hospital.—Dr. Ralph E. Weddington, Fort Smith, has been appointed health officer of Independence County, succeeding Dr. Gardner H. Landers, Batesville, who resigned to join the military forces.—Dr. Frank C. Maguire, Clarendon, has been named director of the Mississippi County health unit.

CALIFORNIA

Lectures for the Public.—The fifty-ninth course of popular medical lectures sponsored by Stanford University School of Medicine, San Francisco, will be presented at Lane Hall by:

Dr. John H. Lawrence, April 4, The Cyclotron in Cancer Research.
Dr. Merlin T. R. Maynard, April 18, Cosmetics and Care of the Skin.
Dr. David A. Ryland, May 2, The Newer Knowledge About High Blood Pressure.

Dr. Hale F. Shirley, May 16, Changing Attitudes in Child Guidance.

Personal.—Alden H. Miller, Ph.D., associate professor of zoology and director of the museum of vertebrate zoology, University of California, Berkeley, has been elected a corresponding member of the Zoological Society of London.—Dr. Henry E. Dahleen has been appointed superintendent of the Santa Clara County Hospital, San Jose, succeeding Dr. Doxey R. Wilson.

CONNECTICUT

Physicians Honored.—Seven physicians who have completed fifty years in the practice of medicine were guests at a dinner recently in Derby, attended by physicians, nurses, hospital board members and their families in the community comprising Shelton, Derby, Ansonia and Seymour. Their names are Drs. Edward K. Parmelee and Henry Steudel, Ansonia; William Sherman Randall, Shelton; Frank N. Loomis, Royal W. Pinney, Charles T. Baldwin, Derby, and Louis E. Cooper, New Haven.

Society News.—The Yale Medical Society was addressed at the Brady Memorial Laboratory, New Haven, February 12, by William U. Gardner, Ph.D., on "Breaking Strength of Bones of Mice Receiving Sex Hormones"; Dr. William Metcalf, "Fat and Effects of Transfused Serum"; Adolf Pharo Gagge, Ph.D., "A Method for the Continuous Measurement of Metabolic Rate During Work," and Drs. Alexander W. Winkler, Hebbel E. Hoff and Paul K. Smith, Ph.D., "Cause of Death in Experimental Anuria." All are of New Haven.

DELAWARE

Society News.—Dr. Edward Weiss, professor of clinical medicine, Temple University School of Medicine, Philadelphia, addressed the New Castle County Medical Society in Wilmington, January 21, on "Illness of Emotional Origin and Its Treatment by the General Practitioner."—The Biochemical Research Foundation, Newark, presented its annual biochemical research lecture recently at the University of Delaware with Prof. Henrik Dam, Biochemical Institute, University of Copenhagen, as the speaker. The subject was "The Present State of Knowledge of Vitamin K."

DISTRICT OF COLUMBIA

The Kober Lecture.—John R. Mohler, D.V.M., chief of the bureau of animal industry, U. S. Department of Agriculture, will deliver the Kober Memorial Lecture, March 28, under the auspices of Georgetown University. His subject will be "Undulant Fever." The lecture is delivered under rules governing an endowment fund established by the late Dr. George M. Kober. Dr. Mohler received his degree in veterinary medicine at the University of Pennsylvania in 1896.

He has been awarded many honorary degrees, is a member of several scientific societies and was president of the American Veterinary Medical Association in 1913.

Postgraduate Clinic.—The ninth annual postgraduate clinic of the George Washington University School of Medicine was held on February 14-15 with Dr. Harry F. Dowling, clinical professor of medicine, as director. The program this year was dedicated to Dr. William Johnston Mallory, professor emeritus of medicine. The evening meetings were under the auspices of the A. F. A. King Obstetrical Society, named in honor of an alumnus of George Washington who died Dec. 13, 1914, and who served on its staff as professor of obstetrics and diseases of women and children from 1871 to 1913 and as dean from 1879 to 1894. Speakers included:

Dr. Louis H. Douglass, Baltimore, Toxemias of Pregnancy.

Dr. Morris Edward Davis, Chicago, Physiology, Chemistry and Clinical Application of the Estrogens.

Dr. Robert A. Ross, Durham, N. C., Management of Uterine Prolapse.

Dr. Tom D. Spies, Cincinnati, Clinical Aspects of Nutritional Diseases.

Dr. Charles Stanley White, Washington, Use of Plasma in Surgery.

Dr. Charles W. Mayo, Rochester, Minn., Diseases of the Colon.

Dr. Paul D. White, Boston, conducted a clinic on heart diseases Saturday afternoon.

FLORIDA

Personal.—Dr. Walter L. Shackelford, West Palm Beach, resigned as superintendent of the Good Samaritan Hospital, effective February 1, to enter private practice. He had been superintendent of the hospital for thirteen years.—Dr. John O. Barfield, formerly of Miami and Apalachicola, has been appointed director of the city-county health department at Panama City.

New State Health Officer.—Dr. William H. Pickett, Jacksonville, assistant state health officer, has been appointed state health officer to fill the unexpired term of Dr. Albert B. McCreary, who died on January 24. Dr. Pickett's position as assistant state health officer was created last year on the recommendation of the American Public Health Association following a survey of the health situation in Florida. Dr. Pickett graduated at the Atlanta School of Medicine in 1911. His public health career includes two years as health officer of Pinellas County, two as health officer in Escambia County and eleven years as health officer first of Saginaw City and later of Saginaw County, Mich. He was also health commissioner of Great Falls, Mont., and deputy state health commissioner for Missouri. Dr. James N. Patterson, Jacksonville, director of the bureau of laboratories since 1938, has been named assistant to Dr. Pickett. He will continue to direct the laboratories. He graduated at the University of Cincinnati College of Medicine in 1929.

GEORGIA

Training School for Study of Malaria.—The U. S. Public Health Service and the state department of health cooperated in a two weeks course recently to train laboratory technicians in the preparation, staining and examination of thick and thin blood films for malaria parasites. The course opened on March 3 under the supervision of Miss Almee Wilcox of the National Institute of Health, and classes were held in the Atlanta laboratories of the state department of health.

Honorary Certificates Awarded.—Three physicians were awarded honorary membership in the Fulton County Medical Society recently for having been members of the society for twenty-five consecutive years and for having reached the age of 65. The physicians are Drs. William Troy Bivings, who graduated at University and Bellevue Hospital Medical College, New York, in 1899 and who has practiced in Atlanta since 1903; Thomas J. Collier, who graduated at Atlanta College of Physicians and Surgeons in 1900 and who has practiced in Atlanta since 1900; Emmett DeWitt Highsmith, who graduated at Atlanta College of Physicians and Surgeons in 1906 and who practiced in Atlanta from 1906 to 1939, when he retired on account of his health. Dr. Collier is vice chairman of the recently organized Section on Anesthesiology of the American Medical Association.

ILLINOIS

Mr. Brandon Heads Department of Public Welfare.—Rodney H. Brandon, Batavia, was recently appointed director of the state department of public welfare, a position he occupied from 1929 to 1933. He succeeds Charles E. Day, resigned. Since 1933 Mr. Brandon has been a lecturer in criminology,

social hygiene and medical jurisprudence at the University of Illinois College of Medicine, Chicago. He has also been serving as a member of the board of public welfare commissioners.

Society News.—Dr. Reno P. Rosi, Springfield, pneumonia control officer of the state department of health, discussed diagnosis and treatment of pneumonia before the Madison County Medical Society at Granite City, March 7.—Joseph H. Roe, Ph.D., Washington, D. C., discussed "Diagnostic Significance of Chemical Changes in the Blood" before the Peoria Medical Society, March 5.—Dr. Guy S. Van Alstyne, Chicago, discussed "Biliary Tract Surgery" before the Rock Island County Medical Society in Rock Island, March 11.

Chicago

Study of Facial Abnormalities.—Northwestern University has received \$50,000 from the Clara A. Abbott trust for the study and treatment of harelip, cleft palate and similar facial or oral abnormalities. The study will be under the direction of Dr. Frederick W. Merrifield of the medical and dental faculties, newspapers announced. The university previously received \$1,665,000 from the Abbott trust, which was set up under the will of the widow of Dr. Wallace C. Abbott, founder of the Abbott Laboratories.

Dr. Bucy Joins Illinois Faculty.—Dr. Paul C. Bucy, associate professor of surgery (neurosurgery), University of Chicago, the School of Medicine, has been appointed associate professor of neurology and neurologic surgery at the University of Illinois College of Medicine. He will be associated with Dr. Eric Oldberg, professor and head of the department of neurology and neurologic surgery in the recently completed Neuropsychiatric Institute on the Chicago campus of the University of Illinois. Dr. Bucy graduated at the State University of Iowa College of Medicine in 1927 and had been on the staff of the University of Chicago since 1928. He was secretary of the Section on Nervous and Mental Diseases of the American Medical Association from 1936 to 1939 and chairman of the section, 1939-1940.

Society News.—Dr. William S. Middleton, Madison, Wis., addressed the Society of Medical History of Chicago February 25 on "Medicine at Valley Forge."—The Chicago Orthopedic Society was addressed, February 14, by Drs. Albert C. Schmidt, Milwaukee, on "Fractures in Children" and Ralph M. Carter, Green Bay, Wis., "Unusual Deformity of Wrist."—Members of the department of ophthalmology of Northwestern University Medical School presented the program before the Chicago Ophthalmological Society, February 17; the speakers were Drs. Edward V. L. Brown on "Retrolental Tissue from the Choroid in Kuhnt-Junius Degeneration"; Bertha A. Klien, "Detachment of the Pars Ciliaris Retinae: A Clinical Finding of Differential Diagnostic Value in Retinal Detachment," and Percy F. Swindle, Ph.D., Milwaukee, "Morphology and Function of the Scleral Vessels."—Dr. Philip Lewin, among others, discussed "Low Back Pain and the Sciatic Syndrome" before the Chicago Roentgen Society, February 17, and Dr. William Edward Chamberlain, Philadelphia, "The Roentgenologist's Part in the Problem of Low Back Pain."

Noise Reduction Council Formed.—The Chicago Noise Reduction Council was organized at a meeting in the Bismarck Hotel, March 11. The council is the result of a movement begun last year when a group of national manufacturers held a conference in Buffalo and formed the National Noise Abatement Council. Mr. F. Edgar McGee of Remington Rand, Inc., Buffalo, is the executive secretary of the national agency, and Mr. George P. Little of the Celotex Corporation, Chicago, chairman. At meetings in Chicago in November and in New York in January a program on ways and means was set up on a temporary basis for the national group. A permanent organization has been effected and headquarters will be established in Cleveland, where on March 18 a meeting of representatives of interested groups throughout the country was held. Directors of the Chicago Noise Reduction Council include Karl Eitel, head of the Bismarck Hotel, chairman; Jules E. Jenkins, president of the Vibration Measurement Engineers, secretary; Fred M. Echhoff of Remington Rand, Inc.; Marshall Solberg, attorney, and G. L. Bostwick, manager, sales department, U. S. Gypsum Company.

INDIANA

Changes in Health Officers.—Dr. Robert M. Ferguson, Indianapolis, has been named director of health district number 4 with headquarters in Rising Sun. He succeeds Dr. George M. Brother, who is now chief of the bureau of local

health administration, Indianapolis. District number 4 includes the counties of Dearborn, Ripley, Jefferson, Switzerland and Ohio. Dr. Wesley M. Hall, Rising Sun, has been appointed to succeed the late Dr. George H. Hansell as health commissioner of Ohio County.

IOWA

Society News.—Dr. Clifford J. Barborka, Chicago, discussed "Nutrition and Subclinical States of Deficiency Diseases" before the Linn County Medical Society in Cedar Rapids on March 13. Dr. Oscar W. Bethea, New Orleans, discussed "Bronchiectasis," February 9.—Dr. Raphael Isaacs, Chicago, addressed the Boone and Story County medical societies in Ames recently on "Diagnosis and Treatment of Common Types of Anemia."—Dr. Frank R. Peterson, Iowa City, discussed diseases of the gallbladder before the Scott County Medical Society in Davenport, February 4.

Annual Meeting on Tuberculosis.—The twenty-sixth annual meeting of the Iowa Tuberculosis Association will be held at the Fort Des Moines Hotel, Des Moines, March 27-28. On the program will be the following out of state speakers: Drs. Henry C. Sweany, Chicago, "Trends During the Past Decade in the Management of Tuberculosis"; Lewis S. Jordan, Granite Falls, Minn., "Finding the Source and Breaking the Contact"; William H. Oatway Jr., Madison, Wis., "Tuberculosis Case-Finding Results Among Hospital Entrants and Personnel," and Charles E. Lyght, Northfield, Minn., "A Challenge to Iowa Colleges."

KANSAS

Personal.—Dr. Clayton L. Scuka has been appointed superintendent of the Sedgwick County Hospital in Wichita, succeeding Dr. Otto F. L. Prochazka, who resigned to serve a year in the army at Fort Robinson, Ark.

Society News.—Dr. Wade H. Miller, Kansas City, Mo., discussed "Various Problems in Aviation Medicine" before the Shawnee County Medical Society on March 3 in Topeka. Dr. Hiram Winnett Orr, Lincoln, Neb., discussed "The Role of Sulfanilamide and Other Antiseptics in the Treatment of Wound Infections and Compound Fractures" before the society, February 3.—Dr. Richard K. Gilchrist, Chicago, addressed the Sedgwick County Medical Society, February 18, in Wichita on "Method of Spread of Carcinoma, with Particular Attention to the Large Bowel."

MARYLAND

Dr. Loewi Delivers Dohme Lectures.—Dr. Otto Loewi, research professor of pharmacology, New York University College of Medicine, New York, delivered the Dohme Lectures for 1940-1941 at the Johns Hopkins University School of Medicine, Baltimore, January 21-22. His subject was "Humoral Transmission of Nervous Impulse."

Medical and Public Health Laboratories.—The mid-winter conference of the Maryland Association of Medical and Public Health Laboratories was held in Baltimore, February 14. The following spoke:

Mr. A. A. Hajna and Cornelius A. Perry, Sc.D., Bacteriologic Examinations for Enteric Pathogens.
Dr. Milton S. Sacks, Diagnosis of Infectious Mononucleosis by Blood Smears and Agglutination Tests.
Dr. Samuel T. Helms, Tests for the Control of Chemotherapy.

MASSACHUSETTS

Dr. Goodpasture Delivers Cutter Lecture.—Dr. Ernest W. Goodpasture, professor of pathology, Vanderbilt University School of Medicine, Nashville, Tenn., delivered the Cutter Lecture on preventive medicine at Harvard Medical School, Boston, Friday, March 7. The subject of the lecture was intracellular infection.

Society News.—Dr. Walter Gray Phippen, Salem, president of the Massachusetts Medical Society, discussed "Medical Preparedness" before the New England Society of Physical Medicine in Boston, February 19.—The Worcester District Medical Society devoted its meeting, February 12, to a round table discussion on neuropsychiatric disorders in relation to military service: the speakers were Drs. Morgan B. Hodskins, Palmer; William Malamud, George A. MacIver, William L. Holt Jr. and Mr. David Shalow, all of Worcester.

MICHIGAN

Graduate Conferences.—The annual spring graduate conferences for physicians, sponsored by the Wayne County Medical Society and the Detroit Department of Health, will be held at Herman Kiefer Hospital, April 9, 16, 23 and 30. The last one will be a joint program with the pediatric group.

New Appointments at Wayne.—Recent additions to the faculty of Wayne University College of Medicine, Detroit, include Drs. Carl C. Pfeiffer, associate professor of pharmacology; Mark E. Maun, assistant professor of pathology; George L. Maison, assistant professor of physiology, and Lawrence Berman, assistant professor of pathology.

Courses for Graduates.—Announcement is made in the state medical journal of a series of courses for graduates in medicine. The courses will be held in Detroit and Ann Arbor and will run through the summer months. An extramural postgraduate course will begin March 24 to continue through April 18 in Ann Arbor, Battle Creek, Kalamazoo, Flint, Grand Rapids, Lansing, Jackson, Mount Clemens, Saginaw, Traverse City, Manistee, Cadillac and Petoskey. Complete details may be obtained from the Department of Postgraduate Medicine, 1313 Ann Street, Ann Arbor.

Annual Clinic Day.—St. Mary's Hospital, Detroit, observed its annual clinic day March 20. The program included a series of clinical panel discussions in the morning. In the afternoon the Theodore A. McGraw Memorial Lectures were delivered by James A. Reyniers, M.S., associate professor and head of the bacteriology laboratories, Notre Dame University, South Bend, Ind., on "Nutrition in the Newborn Germ-Free Animal," and Dr. Henry N. Harkins, Detroit, "Treatment of Shock in Wartime with a Report of the Latest Work of the National Research Council Preparedness Committee on Shock." Alphonse M. Schwitalla, S.J., dean, St. Louis University School of Medicine, St. Louis, gave an address in the evening.

MINNESOTA

Memorial to Dr. Rypins.—Dr. Luigi Luzzatti has been announced as the first incumbent of the Harold Rypins research assistantship in pediatrics at the University of Minnesota Medical School, Minneapolis, according to *Minnesota Medicine*. The position was established by a committee of Twin City physicians and other interested persons in honor of the late Dr. Rypins, who was instructor in medicine at the university from 1920 to 1923. At the time of his death in 1939 Dr. Rypins was secretary of the New York State Board of Medical Examiners. Dr. Luzzatti graduated at the University of Rome, Italy, in 1937.

County Officers' Meeting.—The annual county officers' meeting of the Minnesota State Medical Association was held at the St. Paul Hotel, St. Paul, February 22. Military medical problems were discussed by Lieut. Col. Richard B. Hullsiek, director, medical division of the selective service system, and Major Frederick S. Richardson, surgeon of the first military area. Mr. John B. Pratt, Chicago, executive secretary of the National Physicians Committee for Extension of Medical Service, addressed the luncheon session on "Control and Direction of Medical Service." Justice Royal B. Stone discussed obligations and responsibilities of the doctor in court and particularly the work of the committee on medical testimony. This committee was appointed by the state medical association late in 1940 to be at the disposal of any judge in the state who has reason to believe that medical testimony in a case decided in his court has deliberately deviated from the truth. If, after investigation, the committee decides the testimony was dishonest the case will be turned over to the state board of medical examiners. A similar committee was appointed by the state bar association.

MISSOURI

The Carman Lecture.—The annual Russell D. Carman Lecture will be presented under the auspices of the St. Louis Medical Society on March 25. The speaker will be Dr. Byrl R. Kirklin, Rochester, Minn., and his subject, "Cancer of the Gastrointestinal Tract: Its Early Manifestations."

Symposium on Influenza.—The St. Louis Medical Society sponsored a symposium on influenza in St. Louis, February 11. The following members of the faculty of Washington University School of Medicine, St. Louis, spoke:

Dr. Samuel B. Grant, Clinical Features of the Different Epidemics of Influenza.

Louis A. Julianelle, Ph.D., The Etiology of Influenza.

Simon Edward Sulkin, Ph.D., Epidemiology.

Dr. Carl G. Harford, Specific Prophylaxis.

Jacques J. Bronfenbrenner, Dr.P.H., professor of bacteriology and immunology and public health at the school, discussed the presentations.

Society News.—The St. Louis Medical Society was addressed, March 4, by Drs. Daniel L. Sexton on "Role of the Internist in Management of Hyperthyroidism" and Willard Bartlett Jr., "Objectives of Operation in the Treatment of Toxic Goiter."—The Buchanan County Medical Society was addressed in St. Joseph, February 5, by Drs. Robert O. D. Pearson on "Use of Plasma Transfusions in Surgery" and Thomas L. Howden, "Use of Plasma in Medicine." Both are of St. Joseph.—Dr. Paul C. Bucy, Chicago, addressed the Kansas City Academy of Medicine, March 21, on "Experimental Studies on the Functions of the Brain."

NEW JERSEY

Hudson County Course on Tuberculosis.—The advisory committee on tuberculosis and the committee on postgraduate education of the Medical Society of New Jersey have arranged a postgraduate course on pulmonary tuberculosis to be given at the Hudson County Tuberculosis Hospital, Jersey City, Monday and Friday afternoons by members of the staff, April 4-25. The lecturers will be:

Dr. Isadore Earle Gerber, New York, Pathogenesis of Pulmonary Tuberculosis, April 4.

Dr. Gerber, Bacteriology and Immunity in Tuberculosis, April 7.

Dr. Samuel Cohen, Clinical Classification of Pulmonary Tuberculosis, April 11.

Dr. Abraham E. Jaffin, Case Finding: The Role of the Physician and the Clinic, April 14.

Dr. Harry J. Perlberg, Interpretation of Fluoroscopic and X-Ray Findings in Pulmonary Tuberculosis, April 18.

Dr. Benjamin P. Potter, Medical Treatment of Pulmonary Tuberculosis, April 21.

Dr. Frank Bortone, Surgical Treatment of Pulmonary Tuberculosis, April 25.

NEW YORK

Annual Report on Typhoid Carriers.—The state department of health reports that 434 typhoid carriers, exclusive of those in state institutions, were under supervision in upstate New York at the close of 1940. Thirty-seven new carriers were added during the year. Twenty-eight of these were discovered as a result of investigation of sporadic cases of typhoid, 1 by means of release cultures, 1 in the course of an examination of a food handler and 2 accidentally at the time of a cholecystectomy. Five previously discovered carriers were added to the register: 2 had been living outside the state and the remainder in New York City. Twenty-five names were removed from the register. Fifteen died, 6 were released after cholecystectomy, 1 was committed to a state institution and 3 moved to other jurisdictions, according to *Health News*.

Society News.—Dr. Leon H. Cornwall, New York, addressed the Onondaga County Medical Society, Syracuse, March 4, on "Medical Science and Political Philosophy."—Dr. Louis H. Bauer, Hempstead, L. I., addressed the Syracuse Academy of Medicine, March 18, on "Aviation Medicine."—Dr. Philip M. Stimson, New York, addressed the Medical Society of the County of Westchester, White Plains, March 18, on "Acute Contagious Diseases of Childhood."—Dr. Clay Ray Murray, New York, addressed the Medical Society of the County of Albany in Albany, February 26, on "Problem Fractures About the Elbow Joint."—Dr. Edward H. Ryncarson, Rochester, Minn., addressed the Rochester Academy of Medicine, March 4, on "Endocrinology: A Critical Appraisal."—Drs. Russell Plato Schwartz and Carl T. Harris, Rochester, gave an illustrated public lecture on "Painful Feet and Aching Back," February 23, under the auspices of the Medical Society of the County of Monroe, the Rochester Academy of Medicine and the University of Rochester School of Medicine and Dentistry.

New York City

The Biggs Lecture.—The annual Hermann M. Biggs Lecture of the New York Academy of Medicine will be delivered, April 3, by Dr. Clarence A. Mills, James T. Heady professor of experimental medicine, University of Cincinnati College of Medicine. His subject will be "Relation of Climate and Geography to Health."

Miller Memorial Lecture.—Dr. Esmond R. Long, director of the Henry Phipps Institute, University of Pennsylvania, Philadelphia, will deliver the Adam M. Miller Memorial Lecture at the Long Island College of Medicine, March 28. Dr. Long's subject will be "Environment and Constitution in the Development of Tuberculosis."

Cuban Committee Visits Cornell.—Six members of the faculty of the University of Habana Faculty of Medicine spent the week of January 20-27 in New York at the invitation of Cornell University Medical College on a travel grant made available by the Department of State. The group compose a permanent committee which has been cooperating for the past two years in an exchange of undergraduate students and teaching personnel with Cornell. The Cuban delegation included Drs. Angel Vieta-Barahona, dean of the faculty of medicine; Alberto Inclan, Carlos E. Finlay, Alfredo Antonetti, Felix A. Hurtado and Edward McGough.

Society News.—Drs. Rosario Mule and Silik H. Polayes, among others, addressed the Brooklyn Urological Society, March 11, on "Medical Aspects of Renal Calculi" and "The Pathology of Symmetrical Cortical Necrosis of the Kidneys" respectively. Speakers before the Medical Society of the County of New York, February 24, were Lieut.-Col. Maurice E. Barker, U. S. Army, Washington, D. C., on "Some of the Medical Problems of the Chemical Warfare Service"; Dr. Samuel M. Strong, Flushing, "The Doctor's Relation to Aviation," and Dr. Lowell S. Selling, Detroit, "Mental Hygiene Aspect of the Deferred Draftee."—Drs. Frederick MacCurdy and Harry Projector addressed the Bronx County Medical Society, February 19, on "The Hospital and the Community" and "The Present and Future Status of Private Medical Practice" respectively. Dr. Charles F. Geschickter, Baltimore, addressed the Bronx Pathological Society, February 18, on "The Pathology and Etiology of Mammary Cancer."—Drs. John H. Garlock and Armistead C. Crump addressed the New York Society for Thoracic Surgery, February 14, on "The Present Status of Surgical Treatment of Carcinoma of the Thoracic Esophagus" and "Differential Diagnosis of Lesions of the Lower Esophagus" respectively. Dr. Paul D. White, Boston, addressed the Academy of Pathological Science at a meeting at the New York Medical College, Flower and Fifth Avenue hospitals, January 24, on "Arteriosclerotic Aneurysms of the Aorta."—Dr. Robert D. Mussey, Rochester, Minn., addressed the Medical Society of the County of Queens, February 25, on "Endometriosis."

NORTH CAROLINA

Changes in Health Officers.—Dr. William K. McDowell, Scotland Neck, has been appointed health officer of Richmond County with headquarters at Rockingham.—Dr. Herbert A. Hudgins, Winston-Salem, has been elected health officer of the Rutherford-Polk health district.—Dr. Frank E. Wilson, Tarboro, has resigned as health officer of Edgecombe County to take a course in public health at the University of North Carolina.

Alumni Without an Alma Mater.—Dr. Julius V. Dick, Gibsonville, was elected president of the alumni association of the University of North Carolina School of Medicine at Raleigh, now out of existence, at the annual meeting on February 22 in Chapel Hill. Dr. Joseph N. Moore, Marshall, was elected vice president and Dr. Robert P. Noble, Raleigh, secretary. Drs. Isaac H. Manning, Chapel Hill, and John A. Ferrell, New York, were speakers. The Raleigh unit of the university went out of existence in 1910, and the association of alumni was formed in 1928.

Society News.—Speakers at a meeting of the Mecklenburg County Medical Society, Charlotte, February 4, were Drs. Angus M. McDonald Jr. on "Use of Testosterone in Dysfunction of Male Genital Organs"; Silas Raymond Thompson, "Present Status of Prostatic Surgery," and George Aubrey Hawes, "Present Day Concept in the Study of Male Sterility." All are of Charlotte.—Dr. Irving S. Wright, New York, addressed the Guilford County Medical Society, Greensboro, February 6, on "Diagnosis and Treatment of Obliterative Arterial Disease."—Dr. David T. Smith, Durham, addressed the Forsyth County Medical Society, Winston-Salem, February 18, on "Clinical Applications of Recent Advances in Immunology and Bacteriology."—Dr. Adam T. Thorp, Rocky Mount, discussed eclampsia at a meeting of the Fourth District Medical Society, February 18, in Eureka.

PENNSYLVANIA

Research on Standards of Living.—Pennsylvania State College at State College has established the Ellen H. Richards Institute to study improvements in standards of living in the field of food, clothing and shelter. The unit will take over investigations that have been carried on in the departments of chemistry and home economics and in the agricultural experi-

ment station of the college. Among others, research studies in human nutrition, begun in 1935, will be continued. The institute was named for Ellen H. Richards (1842-1911), for many years instructor in sanitary chemistry at Massachusetts Institute of Technology, who has been called the founder of household science in this country in its modern sense. Pauline Beery Mack, Ph.D., who has been on the staff of the school of chemistry and physics at Pennsylvania State College since 1919 and director of research in home economics since 1935, is the first director of the new institute.

Society News.—Laurance E. Shinn, Ph.D., Pittsburgh, addressed the Washington County Medical Society in Washington, March 12, on "Some Problems Concerning the Action of Sulfanilamide and Related Drugs."—Dr. Mortimer Cohen, Pittsburgh, discussed "Blood Transfusions" at a meeting of the Fayette County Medical Society, Uniontown, March 6.—Lieut.-Col. Frank H. Dixon, U. S. Army, addressed the Dauphin County Medical Society, Harrisburg, March 4, on medical preparedness.—Drs. Joseph C. Yaskin and Robert A. Groff, Philadelphia, addressed the Harrisburg Academy of Medicine, March 18, on "Diagnosis and Management of Operable Brain Lesions."—Dr. James M. Surver, Philadelphia, addressed the Blair County Medical Society, Altoona, February 25, on carcinoma of the stomach.

Philadelphia

Meeting on Diabetes.—Drs. Howard F. Root, Boston, and J. West Mitchell, Pittsburgh, were guest speakers before the Philadelphia County Medical Society, March 12, on "The Possibilities of Cure of Diabetes" and "The Diabetic Group of Diseases" respectively. Dr. Joseph T. Beardwood Jr. discussed "Borderline Metabolic States in Military Personnel" and Dr. Edward Roland Snader, chairman of the society's diabetic committee, the aims and accomplishments of that committee.

Annual Postgraduate Institute.—Evening features of the Sixth Annual Postgraduate Institute of the Philadelphia County Medical Society, March 31 to April 4, will include round table discussions. The first will be held Monday evening, March 31, with Dr. Harrison F. Flippin leading the discussion on "Chemotherapy" with the following assistants: Drs. Dale C. Stahle, Harrisburg; John A. Kolmer, Edward H. Campbell, Harry Lowenburg, Walter W. Baker, Isidor S. Ravdin and Leon Schwartz. Tuesday evening the subject will be "Surgical Aspects of Peptic Ulcer" with Dr. George P. Müller as the leader and Drs. Eldridge L. Eliason and Thomas A. Shallow as assistants. The annual dinner and dance will be given Wednesday evening at the Bellevue-Stratford Hotel. There will also be a luncheon the first day, at which the speakers will include Mayor Lamberton, Drs. Hubley R. Owen, city director of health, John J. Shaw, state secretary of health, Harrisburg, and Lewis T. Buckman, Wilkes-Barre, president-elect of the Medical Society of the State of Pennsylvania.

Pittsburgh

Doctors' Orchestra Organized.—Physicians and dentists of Pittsburgh have organized a symphony orchestra and began rehearsals February 6, with more than forty present. Dr. Myer W. Rubenstein is president of the new organization and Gaylord Yost is the conductor.

Three Health Supplements.—Three Pittsburgh newspapers have recently published health supplements under the sponsorship and direction of the bureau of medical information of the Allegheny County Medical Society. The *Pittsburgh Press* in its supplement, February 25, took as its theme "Medicine and National Defense"; the *Sun-Telegraph*, February 27, "Healthy Americans," and the *Post-Gazette*, March 7, "Health in the Pittsburgh District." The material was written by members of the society and edited by the bureau of medical information, and the advertisements were approved by the bureau.

SOUTH CAROLINA

Personal.—Dr. Karl L. Able was elected mayor of Leesville recently.—Dr. Olin Sawyer, Georgetown, was recently appointed medical director of the South Carolina Industrial Commission, according to a newspaper report.—An oil portrait of Dr. Charles A. Mobley, Orangeburg, was presented to the Tri-County Hospital, Orangeburg, January 5, by the medical staff of the hospital. Dr. Mobley, who has served as president of the South Carolina Medical Association, was honored for his work in promoting hospital facilities in the area. Through the establishment of the Orangeburg Hospital twenty-one years ago he laid the foundation for the present Tri-County Hospital, it was said. Dr. Lawrence P. Thackston, chief of staff, made the presentation.

Postgraduate Assembly for Negro Physicians.—The first postgraduate assembly for Negro physicians in South Carolina was held at State College, Orangeburg, January 28-30, under the auspices of the U. S. Public Health Service, National Tuberculosis Association, South Carolina Tuberculosis Association, South Carolina Sanitarium, the South Carolina State Board of Health, the Palmetto Medical Association and State College. Lectures were presented on obstetrics, pediatrics, tuberculosis and venereal disease by Drs. Robert E. Seibels, William Weston Jr., Robert W. Ball and Sedgwick Simons, Columbia; Pedro Martir Santos, Chicago; Nolan A. Owens, Washington, D. C.; William B. Perry, special consultant, U. S. Public Health Service; Orville L. Ballard, Waverly Hills, Ky., and John M. Preston, South Carolina Sanatorium, State Park.

TENNESSEE

Society News.—A symposium on pneumonia was presented at a meeting of the Memphis and Shelby County Medical Society, January 21, by Drs. Frank T. Mitchell, Alfred M. Goltman, Lucius C. Sanders and Conley H. Sanford. All are from Memphis.—Dr. Charles L. Scudder, Boston, addressed the Chattanooga and Hamilton County Medical Society, January 23, on "Transportation and Treatment of Fractures."—Dr. Herbert Acuff, Knoxville, addressed the Washington, Carter and Unicoi Counties Medical Society in Johnson City, February 6, on "Thoracic Surgery" and Dr. Edward T. Brading, Johnson City, on the pneumonia control program in Tennessee.

Lectures on Poliomyelitis at Vanderbilt.—Six lectures on poliomyelitis will be presented at Vanderbilt University, Nashville, in April under the sponsorship of the National Foundation for Infantile Paralysis. The series is as follows:

- Paul F. Clark, Ph.D., Madison, Wis., The History of Poliomyelitis, April 7.
- Dr. Charles Armstrong, U. S. Public Health Service, Washington, D. C., The Etiology of Poliomyelitis, April 8.
- Dr. Thomas M. Rivers, New York, Immunity to Poliomyelitis, April 9.
- Dr. Ernest W. Goodpasture, Nashville, Pathology and Pathogenesis of Poliomyelitis, April 14.
- Dr. John R. Paul, New Haven, Conn., Epidemiology of Poliomyelitis, April 15.
- Dr. Frank R. Ober, Boston, Treatment and Rehabilitation of Poliomyelitis Patients, April 16.

TEXAS

Radiology Meeting.—The annual meeting of the Texas Radiological Society was held in Sherman, January 18. The speakers included:

- Dr. Fred J. Hodges, Ann Arbor, Mich., The Utility of Radiological Methods in Gastrointestinal Diagnosis.
- Dr. Wendell M. Long, Oklahoma City, Diagnostic Problems Encountered in Carcinoma of the Cervix.
- Dr. Leon J. Menville, New Orleans, Irradiation in Endocrine Dysfunction, Particularly Hyperthyroidism.
- Dr. James R. Maxfield Jr., Albuquerque, N. M., Evaluation of Radiation Methods Now Available for the Treatment of Cancer.
- Dr. Roscoe P. O'Bannon, Fort Worth, Fracture of the Dorsal Spine Following Metastazoid Therapy.
- Dr. Paul C. Williams, Dallas, Scoliosis.
- Dr. Jesse B. Johnson, Galveston, X-Ray Manifestations in Nutritional Deficiencies of Bone.

Dr. Glenn D. Carlson, Dallas, was named president-elect and Dr. Milton H. Glover, Wichita Falls, became president.

UTAH

Annual Registration Due April 1.—All practitioners of medicine and surgery licensed to practice in Utah are required to register annually on or before April 1 with the Department of Registration and to pay a fee of \$3. If a licentiate fails to reregister within ninety days to six months after April 1, his license can be revoked and, if revoked, it will be reinstated thereafter only on his paying the delinquent registration fee and an additional year's fee as a penalty.

WASHINGTON

Society News.—Drs. Raymond A. Lower and Donald A. Palmer, Spokane, addressed the Spokane County Medical Society, February 13, on "Nonopaque Foreign Bodies of the Lung" and "An Unusual Case of Cardiospasm" respectively.—Drs. William Y. Baker and Edward D. Hoedemaker addressed the King County Medical Society, Seattle, March 3, on "Present Status of Active Therapies of the Psychoses" and "Present Status of the Treatment of Neuroses" respectively. Drs. Brien T. King, Charles B. Ward and Sylvester N. Berens addressed the society, Seattle, February 17, on "Post-operative Exophthalmos," and Dr. Harry J. Friedman, "Vascular Diseases of the Extremities."

WYOMING

Personal.—Drs. Charles W. Jeffrey, Rawlins, and George W. Earle, Casper, are serving in the state house of representatives.

Annual Registration Due April 1.—All practitioners of medicine and surgery licensed to practice in Wyoming are required by law to register on or before April 1 with the secretary of the Board of Medical Examiners and to pay a fee of \$2.50. If a licentiate fails to pay the fee within three months after April 1 his license can be annulled, and, if annulled, it will be reinstated only on his paying the stated fee plus \$5 as a penalty.

GENERAL

Registry for Technologists Moved to Indiana.—The Registry of Medical Technologists of the American Society of Clinical Pathologists has been moved from Denver to the Ball Memorial Hospital, Muncie, Ind. The registry has been located in Denver since its organization in 1928 and has been administered by Dr. Philip Hillkowitz as chairman of the board and Mrs. Ann R. Scott, the registrar. With the recent resignation of Dr. Hillkowitz and Mrs. Scott, Dr. Lall G. Montgomery, Muncie, was chosen chairman, and Miss Carlita R. Swenson, formerly with the U. S. Pharmacopeia, Philadelphia, registrar.

Hospital Superintendent Wanted.—There will be a position open for superintendent of a municipally controlled hospital of two hundred and fifty beds, one half of which is for treatment of contagious diseases and the other half for treatment of tuberculosis. Applicants for this position must have had previous administrative experience in responsible hospital positions, including buying of hospital supplies. The contemplated salary is \$7,500 without maintenance. Applications should be filed as soon as possible. Additional information may be obtained from the Chairman of the Board of Trustees, Belmont Hospital, Worcester, Mass.
